Slow Down, I'm Getting Well Too Fast Dr. Iren Fellegvari, 2014-11-14 Our eyes are involved in most of our experiences and in forming our memories. It seems logical that we can use our eyes to change hurtful memories. Emotional Transformation Therapy (ETT) was developed with this concept in mind. Emotions play an extraordinary role in our lives. Every event is labeled with a corresponding emotion in our brains. An experience can be characterized as pleasant or dangerous—or by any other identifier that influences our thoughts and actions or determines whether we want to remember a particular occurrence. Events do not change if the emotional labels are altered, but we think and react differently to different labels. People can go from feeling victimized to becoming proud survivors if the labels are changed. A crisis situation can become either a tragedy or a new beginning based on a person's emotional evaluation. ETT does not change facts, but it can help transform shame, fear, loneliness, emptiness, and other often paralyzing feelings, opening up a person to the possibility of more realistic and empowering mind-sets. ETT offers quick, goal-oriented treatment for severe psychological problems like PTSD, abuse, and eating disorders and everyday situations such as stress in one's professional life, anxiety that hinders achievement, and more. Learn more about this revolutionary new treatment method designed by a licensed clinical psychologist, and unlock the secret to fast, effective recovery.

Visualization of Interface Metaphor for Software Dinesh S. Katre, 2011 This book presents a comprehensive process for visualization of interface metaphor for software. It is helpful in designing interactive user interfaces with magical super-affordances and definitive user experiences. As per the ancient Indian Vedic literature, metaphors are always conceived out of Vastu (entities having existence in our world). The visualization process given in the book shows how metaphorization could help in innovating highly experiential user interfaces, as one can create Avastu (non entities) by combining different objects and imaginative properties together. The main highlights of this process are selection and dissection of interface metaphor, pre-facto analysis, qualitative and quantitative evaluation, mapping between user and application domain lexicons, specialized set of usability heuristics and remote usability testing. The steps of this process are integrated with the Software Development Life Cycle (SDLC). It shows the interdependence of form and function and its seamless fusion during software engineering. User experience designers can apply this process for designing websites, online applications, personal computer software, e-learning, computer games, virtual interactive worlds, public access systems, mobile and tablet applications.

This practical book of techniques and projects demonstrates the simple style of the Bayeux tapestry, before showing variations based on both surviving examples and adaptations of medieval manuscripts. It explains the narrow range of stitches used in laid and couched work and introduces the limited colour palette in medieval embroidery and the rhythmic use of colour. There are twelve projects with step-by-step sequences that illustrate how to stitch subjects ranging from knights to trees, and from dragons to bishops. By introducing subtle variations of techniques and materials, Tanya Benthall illustrates the endless potential of this beautiful embroidery, and brings it alive for today's embroiderers.
