🔍 ANALYZING HORIZONTAL DISTANCES BETWEEN WSR-88D THUNDERSTORM CENTROIDS AND CLOUD-TO-GROUND LIGHTNING STRIKES STEVE L. RENNER,AIR FORCE INSTITUTE OF TECHNOLOGY (U.S.),1998-03-01 On April 29, 1996, lightning struck the airfield at Hurlburt Field, FL, killing one airmen and injuring ten others. This cloud to ground lightning strike hit eight minutes after a lightning advisory was canceled. At the time of the strike, thunderstorms were observed 7 to 10 miles north and south of the airfield. The incident raised questions about Air Force Weather Agency’s lightning criteria. Soon after the incident, a lightning safety review panel was assembled to determine the adequacy of lightning advisories. One of the questions posed to the panel was could an incident like Hurlburt happen again? The review panel could not answer that question due to the lack of documented research on how far lightning can travel horizontally before striking the ground. This thesis used the WSR-88D Algorithm Testing and Display System (WATADS) and the default parameters of the WATADS’s Storm Cell Identification and Tracking (SCIT) Algorithm to identify thunderstorm centroids. Lightning strike data containing nearly 50,000 cloud to ground strikes was obtained through the National Climatic Data Center (NCDC). Horizontal distances were then computed between these storm centroids and cloud to ground lightning strikes. This research discovered that average distances between thunderstorm centroids and lightning strikes vary with season and location. In addition, nearly 75% of all lightning strikes occurred within 10 nautical miles of thunderstorm centroids.

 **GREAT PLAINS WEATHER** Kenneth F. Dewey,2019-05-01 The weather of the Great Plains is extreme and highly variable, from floods to droughts, blizzards to tornadoes. In Great Plains Weather Kenneth F. Dewey explains what makes this region’s climate unique by presenting a historical climatology of extreme weather events. Beginning with tornadoes--perhaps the most formidable plains weather phenomena--he describes the climatology of these storms and discusses memorable tornadoes of the plains. As one of the storm chasers who travels the Great Plains in the spring and summer tracking severe weather, Dewey also shares some of his experiences on the road. Dewey then goes on to discuss famous blizzards, from the School Children’s Storm of 1888 to more recent storms, along with droughts and floods. Precipitation, or the lack thereof, has long determined human activity in the region; exacerbated by the vagaries of climate change, it continues to have a significant economic and cultural impact on the people of the plains. Dewey’s absorbing narrative is complemented by images of tornadoes, snowstorms, and flash floods that he amassed in forty years of climatological research.
