*Montgomery Ward Catalogue of 1895* Montgomery Ward & Co.,Montgomery Ward,1969-08-01 Tea gowns, bleached damask, and yards of flannel and pillow-case lace, stereoscopes, books of gospel hymns and ballroom gems, the New Improved Singer Sewing Machine, side saddles, anti-freezing well pumps, Windsor Stoves, milk skimmers, straight-edged razors, high-button shoes, woven cane carpet beaters, spittoons, the Studebaker Road Cart, commodes and washstands, the Fire Fly single wheel hoe, cultivator, and plow combined, flat irons, and ice cream freezers. What man, woman, or child of the 1890s could resist these offerings of the Montgomery Ward catalogue, the one book that was read avidly, year after year, by millions of Americans on farms and in small towns across the nation? The Montgomery Ward catalogue provides one of the few irrefutably accurate pictures of what life was really like in the gay nineties, for it described and illustrated almost anything that anybody could possibly need or want in the way of store-bought goods. In fact, in that pre-department store era, it was usually the only source for such goods. Imagine if Montgomery Ward had issued an illustrated catalogue in the days of Louis XIV, or Elizabeth I, or Charlemagne: what insights would we have into the daily life of the common folk, the farmers and shopkeeper, housewives and schoolchildren . . . what sources of information for historians and scholars, collectors and dealers, what models for artists and designers. In 1895, Montgomery Ward was the oldest, largest, and most representative mail-order house in the country. The brainchild of a former traveling salesman, it issued its first catalogue in 1872, a one-page listing of items. By 1895, the catalogue, reprinted here, had grown to 624 pages and listed some 25,000 items, almost all of them illustrated with live drawings. Montgomery Ward was by then a multi-million dollar business that profoundly affected the American economy; and since it reached the most isolated farms and backwoods cabins, its effect on American culture was almost as great. Now once again available, it is our truest, most unbiased record of the spirit of the 1890s. An introduction on the history of the Montgomery Ward Company and its catalogue has been prepared especially for this edition by Boris Emmet, Ph.D. (Johns Hopkins), a foremost expert on retail merchandising. His monumental work Catalogues and Counters has long been recognized as a landmark in the study of American economic history.

Information Foraging Theory Peter L. T. Pirolli,2009-05-16 Although much of the hubris and hyperbole surrounding the 1990's Internet has softened to a reasonable level, the inexorable momentum of information growth continues unabated. This wealth of information provides resources for adapting to the problems posed by our increasingly complex world, but the simple availability of more information does not guarantee its successful transformation into valuable knowledge that shapes, guides, and improves our activity. When faced with something like the analysis of sense-making behavior on the web, traditional research models tell us a lot about learning and performance with browser operations, but very little about how people will actively navigate and search through information structures, what information they will choose to consume, and what conceptual models they will induce about the landscape of cyberspace. Thus, it is fortunate that a new field of research, Adaptive Information Interaction (AII), is becoming possible. All centers on the problems of understanding and improving human-information interaction. It is about how people will best shape themselves to their information environments, and how information environments can best be shaped to people. Its roots lie in human-computer interaction (HCI), information retrieval, and the behavioral and social sciences. This book is about Information Foraging Theory (IFT), a new theory in Adaptive Information Interaction that is one example of a recent flourish of theories in adaptationist psychology that draw upon evolutionary-ecological theory in biology. IFT assumes that people (indeed, all organisms) are ecologically rational, and that human information-seeking mechanisms and strategies adapt the structure of the information environments in which they operate. Its main aim is to create technology that is better shaped to users. Information Foraging Theory will be of interest to student and professional researchers in HCI and cognitive psychology.

*Game Theory for Control of Optical Networks* Laca Pavel,2012-04-27 Optical networks epitomize complex communication systems, and they comprise the Internet's infrastructural backbone. The first of its kind, this book develops the mathematical framework needed from a control perspective to tackle various game-theoretical problems in optical networks. In doing so, it aims to help design control algorithms that optimally allocate the resources of these networks. With its fresh problem-solving approach, Game Theory in Optical Networks is a unique resource for researchers, practitioners, and graduate students in applied mathematics and systems/control engineering, as well as those in electrical and computer engineering.

EU proposals for the dairy sector and the future of the dairy industry Great Britain: Parliament: House of Commons: Environment, Food and Rural Affairs Committee,2011-07-29 The Environment Food and Rural Affairs Committee reports that the European Commission's proposed package of measures for the dairy sector is not sufficient on its own to redress the problems facing the UK industry. It warns that farm-gate milk prices remain below the average cost of production and calls on the Government to set out its strategy to improve the state of the UK dairy sector. The MPs call on the Government to ensure that UK dairy farmers are offered written contracts by processors that specify either the raw milk price or the principles underpinning the price, the volume and timing of deliveries, as well as duration of the agreement. The Committee also argues that the forthcoming abolition of EU milk quotas coupled with growing global demand for dairy products creates a significant window of opportunity for UK dairy production. The Committee supports the European Commission's proposal to allow dairy producer organisations to jointly set prices but warned that without greater safeguards this could lead to competitive distortions. In addition, the Committee calls on DEFRA to promptly establish its position on large-scale dairy farming. DEFRA should also provide greater support for innovative research and development in the dairy sector that is focussed on novel uses and processes that add value.
