Manufacturing the Cloth of the World Roger Holden,2017 This well illustrated book is the first comprehensive study of the weaving sector of the Lancashire cotton industry to be published. The focus is on the development of weaving mills against the background of the economic development and organisation of the industry. Hand loom weaving was carried out in domestic premises or small workshops. Early power looms were installed in multi-storey mills combined with spinning, the characteristic form of single storey shed with north-light roof used solely for weaving developing later. The construction, power systems and layout of these mills are considered in detail. The book is based

on original research looking at both the mills themselves and documentary sources, including plans and company records.
