Analysis of Arithmetic for Mathematics Teaching Gaea Leinhardt, Ralph Putnam, Rosemary A. Hattrup, 2020-11-25 This volume emerges from a partnership between the American Federation of Teachers and the Learning Research and Development Center at the University of Pittsburgh. The partnership brought together researchers and expert teachers for intensive dialogue sessions focusing on what each community knows about effective mathematical learning and instruction. The chapters deal with the research on, and conceptual analysis of, specific arithmetic topics (addition, subtraction, multiplication, division, decimals, and fractions) or with overarching themes that pervade the early curriculum and constitute the links with the more advanced topics of mathematics (intuition, number sense, and estimation). Serving as a link between the communities of cognitive researchers and mathematics educators, the book capitalizes on the recent research successes of cognitive science and reviews the literature of the math education community as well.

Play & Learn Math: Number Sense Susan Kunze, 2021-02 Develop young children's number sense with these lively activities that teach counting, subitizing, growing patterns, early addition and subtraction, and more.

Preschool Math Robert A. Williams, Debra Cunningham, Joy Lubawy, 2005 Children will delight in the 140 activities that bring math to life in the classroom. This collection is organized by curriculum area, making it easy for teachers to integrate the activities into their daily plans. Teachers/parents.

The Nature of Learning Disabilities Kenneth A. Kavale, Steven R. Forness, 2012-12-06 The category of learning disabilities continues to be among the most contentious in special education. Much of the debate and dissent emanates from a lack of understanding about its basic nature. The failure to evolve a comprehensive and unified perspective about the nature of learning disabilities has resulted in the concept being lost. The loss is best illustrated through the failure to answer this seemingly simple question: What is a learning disability? Using historical, empirical, theoretical, conceptual, and philosophical analyses, this volume explores a number of problems and issues facing the field of learning disabilities. The chapters cover historical influences, definitional problems, primary characteristics, assessment practices, theoretical development, major themes, research and measurement models, and long-term outcomes. The goal is to explicate the nature of learning disabilities by analyzing what it was supposed to be, what it has become, and what it might be. A predominant theme running through this text is the necessity for the field of learning disabilities to regain integrity by recapturing its essence.

Mathematics in Early Years Education Ann Montague-Smith, Tony Cotton, Alice Hansen, Alison J. Price, 2017-10-09 This fourth edition of the bestselling *Mathematics in Early Years Education* provides an accessible introduction to the teaching of mathematics in the early years. Covering all areas of mathematics - number and counting, calculation, pattern, shape, measures and data handling - it provides a wide range of practical activities and guidance on how to support young children's mathematical development. There is also guidance on managing the transition to KS1 and a strong emphasis throughout on creating home links and working in partnership with parents. This new edition has been fully updated to incorporate the latest research and thinking in this area and includes: why mathematics is important as a way of making sense of the world how attitudes to mathematics can influence teaching and learning

how children learn mathematics and what they are capable of learning how technology can support maths teaching maths phobia and the impact society has on maths teaching material on sorting, matching and handling data the importance of educating about finance in today's world ideas for observation and questioning to assess children's understanding examples of planned activities suggestions for language development assessment criteria. This textbook is ideal for those training to be teachers through an undergraduate or PGCE route, those training for Early Years Professional Status and those studying early childhood on foundation or honours degrees, as well as parents looking to explore how their young children learn mathematics. This will be an essential text for any early years practitioner looking to make mathematics interesting, exciting and engaging in their classroom.

Mathematical Difficulties ,2008-07-25 This book examines the mathematical difficulties in typical and atypical populations. It discusses the behavioural, educational and neuropsychological characteristics of people with mathematical difficulties, and educational interventions to prevent, diagnose, treat or ameliorate such difficulties. The book brings together studies from different disciplines, including developmental psychology, neuroscience and education, and includes perspectives from practicing teachers. The book is divided into three major sections. The first includes chapters about the nature and characteristics of mathematical difficulties in the population as a whole, in relation to both psychology and education. The second deals with mathematical difficulties in children with other problems such as specific language impairment and dyslexia. The third discusses methods of interventions aimed at preventing, treating or ameliorating mathematical difficulties, and will include discussions of assessment and diagnosis.

Intelligent Feature Selection for Machine Learning Using the Dynamic Wavelet Fingerprint Mark K. Hinders,2020-07-01 This book discusses various applications of machine learning using a new approach, the dynamic wavelet fingerprint technique, to identify features for machine learning and pattern classification in time-domain signals. Whether for medical imaging or structural health monitoring, it develops analysis techniques and measurement technologies for the quantitative characterization of materials, tissues and structures by non-invasive means. Intelligent Feature Selection for Machine Learning using the Dynamic Wavelet Fingerprint begins by providing background information on machine learning and the wavelet fingerprint technique. It then progresses through six technical chapters, applying the methods discussed to particular real-world problems. These chapters are presented in such a way that they can be read on their own, depending on the reader's area of interest, or read together to provide a comprehensive overview of the topic. Given its scope, the book will be of interest to practitioners, engineers and researchers seeking to leverage the latest advances in machine learning in order to develop solutions to practical problems in structural health monitoring, medical imaging, autonomous vehicles, wireless technology, and historical conservation.
