Music, Sound and Space Georgina Born, 2013-01-17

Music, Sound and Space is the first collection to integrate research from musicology and sound studies on music and sound as they mediate everyday life. Music and sound exert an inescapable influence on the contemporary world, from the ubiquity of MP3 players to the controversial use of sound as an instrument of torture. In this book, leading scholars explore the spatialisation of music and sound, their capacity to engender modes of publicness and privacy, their constitution of subjectivity, and the politics of

sound and space. Chapters discuss music and sound in relation to distinctive genres, technologies and settings, including sound installation art, popular music recordings, offices and hospitals, and music therapy. With international examples, from the Islamic soundscape of the Kenyan coast, to religious music in Europe, to First Nation musical sociability in Canada, this book offers a new global perspective on how music and sound and their spatialising capacities transform the nature of public and private experience.

Stereophonica Gascia Ouzounian, 2021-02-16 Episodes in the transformation of our understanding of sound and space, from binaural listening in the nineteenth century to contemporary sound art. The relationship between sound and space has become central to both creative practices in music and sound art and contemporary scholarship on sound. Entire subfields have emerged in connection to the spatial aspects of sound, from spatial audio and sound installation to acoustic ecology and soundscape studies. But how did our understanding of sound become spatial? In *Stereophonica*, Gascia Ouzounian examines a series of historical episodes that transformed ideas of sound and space, from the advent of stereo technologies in the nineteenth century to visual representations of sonic environments today. Developing a uniquely interdisciplinary perspective, Ouzounian draws on both the history of science and technology and the history of music and sound art. She investigates the binaural apparatus that allowed nineteenth-century listeners to observe sound in three dimensions; examines the development of military technologies for sound location during World War I; revisits experiments in stereo sound at Bell Telephone Laboratories in the 1930s; and considers the creation of optimized acoustical environments for theaters and factories. She explores the development of multichannel spatial music in the 1950s and sound installation art in the 1960s; analyzes the mapping of soundscapes; and investigates contemporary approaches to sonic urbanism, sonic practices that reimagine urban environments

through sound. Rich in detail but accessible and engaging, and generously illustrated with photographs, drawings, maps, and diagrams of devices and artworks, *Stereophonica* brings an acute, imaginative, and much-needed historical sensibility to the growing literature around sound and space.

Half Sound, Half Philosophy Jing Wang, 2021-01-14 From the late 1990s until today, China's sound practice has been developing in an increasingly globalized socio-political-aesthetic milieu, receiving attentions and investments from the art world, music industry and cultural institutes, with nevertheless, its unique acoustic philosophy remaining silent. This book traces the history of sound practice from contemporary Chinese visual art back in the 1980s, to electronic music, which was introduced as a target of critique in the 1950s, to electronic instrument building fever in the late 1970s and early 1980s, and to the origins of both academic and nonacademic electronic and experimental music activities. This expansive tracing of sound in the arts resonates with another goal of this book, to understand sound and its artistic practice

through notions informed by Chinese qi-cosmology and qi-philosophy, including notions of resonance, shanshui (mountains-waters), huanghu (elusiveness and evasiveness), and distributed monumentality and anti-monumentality. By turning back to deep history to learn about the meaning and function of sound and listening in ancient China, the book offers a refreshing understanding of the British sinologist Joseph Needham's statement that "Chinese acoustics is acoustics of qi." and expands existing conceptualization of sound art and contemporary music at large.

Great Church Sound James Wasem, 2019-04-15 Second Edition

Live Wires Dan Warner, 2017-10-15 We live in an electronic world, saturated with electronic sounds. Yet, electronic sounds aren't a new phenomenon; they have long permeated our sonic landscape. What began as the otherworldly sounds of the film score for the 1956 film *Forbidden Planet* and the rarefied, new timbres of Stockhausen's *Kontakte* a few years later, is now a common soundscape in technology, media, and an array of musical genres and subgenres. More people than ever before can produce and listen to electronic music, from isolated experimenters, classical and jazz musicians, to rock musicians, sound recordists, and the newer generations of electronic musicians making hip-hop, house, techno, and ambient music.

Increasingly we are listening to electronic sounds, finding new meanings in them, experimenting with them, and rehearing them as listeners and makers. *Live Wires* explores how five key electronic technologies—the tape recorder, circuit, computer, microphone, and turntable—revolutionized musical thought. Featuring the work of major figures in electronic music—including everyone from Schaeffer, Varèse, Xenakis, Babbitt, and Oliveros to Eno, Keith Emerson, Grandmaster Flash, Juan Atkins, and Holly Herndon—*Live Wires* is an arresting discussion of the powerful musical ideas that are being recycled, rethought, and remixed by the most interesting electronic composers and musicians today.

Professional Sound Reinforcement Techniques Jim Yakabuski, 2001 This witty and informative book demonstrates the finer points of live sound mixing from the perspective of an industry veteran with a proven track record. Through his easy-to-understand tips, readers will learn the secrets that Yakabuski's used to make Van Halen, Aerosmith, Julio Iglesias and others sound great. *Professional Sound Reinforcement Techniques* gives unique insight into a wide variety of general and specific live sound topics, from PA system setup and band politics to zone equalization and signal processing.

Live Electronics Gary Montague, 1992-02-12

Gary Hill Gary Hill, 2000 Time, this is what is central to video, it is not seeing as its etymological roots imply. Video's intrinsic principle is feedback. -- Gary Hill (From Inter-view) For more than twenty years Gary Hill has been at the cutting edge of video, often setting the terms for its development and pointing it in new, exciting directions. Since the mid-eighties, Hill has established himself as one of the major voices in the medium. His work has been the focus of major exhibitions and retrospectives at museums in Europe and the United States, including the Guggenheim Museum in Soho, the Whitney Biennial, and the Lyon Museum in France. He has received numerous awards, including the coveted MacArthur Award (1998). Hill's work focuses on the poetic and philosophical implications of temporal perception. Tall Ships, for example, is a large-scale video installation that presents haunting images of isolated human figures in a darkened corridor, seen from a distance, then close up. Hill's representation of time in videos is partly informed by his adolescent experiences as a surfer in Southern California: his Learning Curve series invites the viewer to sit at the end of a long table and watch a black-and-white projection of a wave folding and unfolding upon itself. Other themes in Hill's work include meditations on the self-referentiality of the medium and explorations of the connections and conflicts between language and image. This new volume in PAJ's Art + Performance series is the first critical edition devoted to Hill's work. Edited by Robert C. Morgan, it anthologizes a number of critical essays tracing Hill's reception from the mid-seventies to today, a series of informative interviews, as well as a selection of Hill's writings -- revealing him as an original and articulate thinker. The book also offers a detailed chronology of Hill's career, a bibliography and videography, and twenty-five photos from his installations. Morgan's introduction traces Hill's emergence as an artist out of the sixties' counter-culture and explores how his work creates dialogues with philosophers as diverse as Heidegger, Blanchot, Derrida, and Marshall McLuhan.

Home Studio Setup Ben Harris, 2012-10-12 Whether you have a ton of equipment or just the basic gear this book offers an all you need to know to setting up, running and getting great sound from a project studio. In three parts Harris walks you through Acoustics, Equipment and Recording Technique. From the basics of acoustic treatment to techniques to solve problems specific to your room, and from offering explanations and information of equipment to how to record and create a great mix. In no time you'll be recording, producing great music in your very own studio.

Sound Work Jonathan Impett, 2021-12-15 The practices and perception of music creation have evolved with the cultural, social and technological contexts of music and musicians. But musical authorship, in its many technical and aesthetic modes, remains an important component of music culture. Musicians are increasingly called on to share their experience in writing. However, cultural imperatives to account for composition as knowledge production and to make claims for its uniqueness inhibit the development of discourse in both expert and public spheres. Internet pioneer Philip Agre observed a discourse deficit in artificial intelligence research and proposed a critical technical practice, a single disciplinary field with “one foot planted in the craft work of design and the other foot planted in the reflexive work of critique. ... A critical technical practice rethinks its own premises, re-evaluates its own methods, and reconsiders its own concepts as a routine part of its daily work.” This volume considers the potential for critical technical practice in the evolving situation of composition across a wide range of current practices. In seeking to tell more honest, useful stories of composition, it hopes to contribute to a new discourse around the creation of music.

There is no soundtrack Ming-Yuen S. Ma, 2020-06-24 There is no soundtrack is a study of how sound and image produce meaning in contemporary experimental media art by artists ranging from Chantal Akerman to Nam June Paik to Tanya Tagaq.

It contextualises these works and artists through key ideas in sound studies: voice, noise, listening, the soundscape and more. The book argues that experimental media art produces radical and new audio-visual relationships challenging the visually dominated discourses in art, media and the human sciences. In addition to directly addressing what Jonathan Sterne calls 'visual hegemony', it also explores the lack of diversity within sound studies by focusing on practitioners from transnational and diverse backgrounds. As such, it contributes to a growing interdisciplinary scholarship, building new, more complex and reverberating frameworks to collectively sonify the study of culture.
