Agricultural Internet of Things and Decision Support for Smart Farming reveals how a set of key enabling technologies (KET) related to agronomic management, remote and proximal sensing, data mining, decision-making and automation can be efficiently integrated in one system. Chapters cover how KETs enable real-time monitoring of soil conditions, determine real-time, site-specific requirements of crop systems, help develop a decision support system (DSS) aimed at maximizing the efficient use of resources, and provide planning for agronomic inputs differentiated in time and space. This book is ideal for researchers, academics, post-graduate students and practitioners who want to embrace new agricultural technologies. Presents the science behind smart technologies for agricultural management Reveals the power of data science and how to extract meaningful insights from big data on what is most suitable based on individual time and space Proves how advanced technologies used in agriculture

practices can become site-specific, locally adaptive, operationally feasible and economically affordable

Engineering Aspects of Membrane Separation and Application in Food Processing Robert W.

Field, Erika Bekassy-Molnar, Frank Lipnizki, Gyula Vatai, 2017-06-26 Engineering Aspects of Membrane Separation and Application in Food Processing presents an overview and introduction to a wide range of membrane processes, their unique characteristics and challenges. In the food industry, as in many industries, membranes have an environmental advantage over conventional processes that they displace, because they are less energy intensive. The processing at near-ambient conditions also retains flavors and nutritional value. These advantages, together with significant reductions in the cost of membrane modules, augers well for their future not only in the dairy industry but in other parts of the food industry, such as alcohol processing, animal product processing, and fruit and vegetable processing. Chapters address a wide range of membranes separations in the food and beverage industries, and applications are provided that will be of value not only to food engineers but also to process engineers working in other areas. The processing of food is now a highly interdisciplinary science, and anyone concerned with food processing will benefit from reading this book and understanding what membrane processes of the twenty-first century have to offer.

Management Consulting Today and Tomorrow

Flemming Poulfelt,Thomas H. Olson,2017-09-01 This new edition gathers more than 22 experts to outline the theory behind consulting, providing insight into change processes and management issues in the field. The business of consulting has grown faster than most other businesses, due not only to increased demand by clients, but also to the innovative capabilities of numerous consulting firms as they develop new services. Divided into six parts, the book introduces readers to the consulting industry, addressing the major practice areas, contexts, and implementations of the field. Significant updates detail the effect of the economic troubles between 2004 and 2010 and then 2010 and now; analyze the market response to consulting in recent years; and provide a more thorough understanding of how consulting is applied in the different areas of a business, such as operations, marketing, and finance. Introductions written by the editors offer further insight into the themes and learning

goals of each section, helping readers to recognize the elements of a successful consultation, and utilize their new skill set. The text concludes with a look at the future of consulting with regards to ethics standards and how strong manager-client relationships contribute to financial growth. Readers will also learn how the developing field of entrepreneurship creates new economic structures and job opportunities. Practitioners, consultants, clients, faculty, and students of business and management will learn not only how to consult, but also gain the skills needed to adapt to and lead organizational change, giving them a competitive edge when they enter the field.

Literature 1988, Part 2 Astronomisches Rechen-Institut, 2013-06-29 From the reviews: Astronomy and Astrophysics Abstracts has appeared in semi-annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy, astrophysics and neighbouring sciences. It is the most important English-language abstracting journal in the mentioned branches. ...The abstracts are classified under more than a hundred subject categories, thus permitting a quick survey of the whole extended material. The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences. As such it represents a necessary ingredient of any astronomical library all over the world. Space Science Reviews#1 Dividing the whole field plus related subjects into 108 categories, each work is numbered and most are accompanied by brief abstracts. Fairly comprehensive cross-referencing links relevant papers to more than one category, and exhaustive author and subject indices are to be found at the back, making the catalogues easy to use. The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes.
