Oil in Texas Diana Davids Hinton,Roger M. Olien,2002-03-15 The dramatic story of the oil boom that transformed the history of a state, drawn from archives and first-person accounts. As the twentieth century began, oil in Texas was easy to find, but the quantities were too small to attract industrial capital and production. Then, on January 10, 1901, the Spindletop gusher blew in. Over the next fifty years, oil transformed Texas, creating a booming economy that built cities, attracted out-of-state workers and companies, funded schools and universities, and generated wealth that raised the overall standard of living, even for blue-collar workers. No other twentieth-century development had a more profound effect upon the state. This book chronicles the explosive growth of the Texas oil industry from the first commercial production at Corsicana in the 1890s through the vital role of Texas oil in World War II. Using both archival records and oral histories, they follow the wildcatters and the gushers as the oil industry spread into almost every region of the state. The authors trace the development of many branches of the petroleum industry: pipelines, refining, petrochemicals, and natural gas. They also explore how overproduction and volatile prices led to increasing regulation and gave broad regulatory powers to the Texas

Railroad Commission.

Leveraging Transdisciplinary Engineering in a Changing and Connected World P. Koomsap,A. Cooper,J. Stjepandić,2023-11-14 Simple problems have become rare in today's technologically advanced world. Problems are typically much more complex, and solving them requires integrative knowledge from several disciplines. Technology alone cannot be the answer. Collaborative teams equipped with knowledge and skills in various disciplines are indispensable to exploit technologies effectively and create new conceptual, theoretical, methodological, and translational innovations that integrate and move beyond discipline-specific approaches to address a common problem in the changing and connected world. This book presents the proceedings of TE2023, the 30th International Conference on Transdisciplinary Engineering, held in Hua Hin Cha Am, Thailand from 11-14 July 2023. The theme of this year's conference was Leveraging Transdisciplinary Engineering in a Changing and Connected World, and it provided a forum for more than 115 participants from academia and industry to exchange knowledge and ideas connected to this aspect of transdisciplinary engineering. A total of 117 submissions were received for the conference, of which 93 were selected for presentation and publication here following a rigorous abstract and full-paper review process. They are arranged under 7 categories: product design and development; team working; smart operations for value chain management; transdisciplinary approaches; engineering education; critical issues

in transdisciplinary engineering; and theoretical contributions. Providing a comprehensive overview of the latest innovations and ideas in transdisciplinary engineering, the book will be of interest to all those working in the field.
