**Electronic Tagging and Tracking in Marine Fisheries** John R. Sibert,Jennifer L. Nielsen,2013-03-09 Reviews: Methods and Technology in Fish Biology and Fisheries published by Kluwer Academic Publishers is a book series dedicated to the publication of information on advanced, forward-looking methodologies, technologies, or perspectives in fish and is especially dedicated to relevant topics addressing global, fisheries. This series international concern in fish and fisheries. Humans continue to challenge our environments with new technologies and technological applications. The dynamic creativity of our own species often tends to place the greatest burden on our supporting ecosystems. This is especially true for aquatic networks of creeks, lakes, rivers and ocean environments. We also frequently use our conceptual powers to balance conflicting requirements and demands on nature and continue to develop new approaches and tools to provide sustainable resources as well as conserve what we hold most dear on local and global scales. This book series will provide a window into the developing dynamic among humans, aquatic ecosystems (both freshwater and marine), and the organisms that inhabit aquatic environments. There are many reasons to doubt the increasing social and economic value technology has gained over the last two centuries. Science and technology represent stages in human development. I agree with Ernst Mayer when he said in Toward a New Philosophy of Biology (1988) that endeavors to solve all scientific problems by pure logic and refined measurements are unproductive, if not totally irrelevant.

*Tagging and Tracking of Marine Animals with Electronic Devices* Jennifer L. Nielsen,Haritz Arrizabalaga,Nuno Fragoso,Alistair Hobday,Molly Lutcavage,John Sibert,2009-06-10 The 2nd international tagging and tracking symposium was held in San Sebastian, Spain, in October 2007, seven years after the first symposium was held in Hawaii in 2000 (Sibert and Nielsen 2001). In the intervening seven years, there have been major advances in both the capability and reliability of electronic tags and analytical approaches for geolocation of tagged animals in marine habitats. Advances such as increased data storage capacity, sensor development, and tag miniaturization have allowed researchers to track a much wider array of marine animals, not just large and charismatic species. Importantly, data returned by these tags are now being used in population analyses and movement simulations that can be directly utilized in stock assessments and other management applications. Papers in this volume are divided into three sections, the first describing insights into behavior achieved using acoustic, archival, and novel tags, the second reporting on advances in methods of geolocation, while the final section includes contributions where tag data have been used in management of marine species. Accurate documentation of animal movements and behaviors in critical marine habitats are impossible to obtain with other technologies. The management and conservation of marine species are critical in today's changing ocean environment and as electronic tags become more accurate and functional for a diversity of organisms their application continues to grow, setting new standards in science and technology.

**Cooperative Game Fish Tagging Program Annual Newsletter 1990** Edwin L. Scott,Robert E. Bayley,Joseph E. Tashiro,Curtis Watada,1991 The Cooperative Game Fish Tagging Program is a joint research effort by scientists, recreational, and commercial fishermen. It is designed to provide basic information on the movements and biology of game fish populations in the Atlantic Ocean, Gulf of Mexico, and the Caribbean Sea through the direct participation of the public in scientific research. In 1990, program cooperators and scientists tagged and released 10,955 fish of 47 species in the Atlantic Ocean, Gulf of Mexico, and the Caribbean Sea. A total of 6,970 billfish were tagged and released: 3,309 sailfish, 1,274 white marlin, 1,993 blue marlin, and 394 swordfish. There were 1,256 tunas tagged and released: 597 yellowfin, 415 bluefin, and 244 miscellaneous tunas. Other species tagged and released by program cooperators were: 581 red drum, 772 tarpon, 456 king mackerel, 320 amberjack, and 201 cobia. In addition, 399 fish of 32 miscellaneous species were tagged and released--Page 1, paragraphs 1-2

**Pink Salmon, *Oncorhynchus Gorbuscha*, Tagging Experiments in Southeastern Alaska, 1938-42 and 1945** Roy E. Nakatani,Gerald John Paulik,Richard Van Cleve,1975 A total of 20, 532 pink salmon (*Oncorhynchus gorbuscha*) were tagged and released in southeastern Alaska north of Sumner Strait during the years of 1938 to 1942 inclusive, and in 1945. The recovery of 7, 027 of these tags in the fish traps confirmed the findings of other investigators that the pink salmon stocks of the northern part of southeast Alaska are separate from those in the southern part. They also show that pink salmon enter the northern part of southeast Alaska through two paths: (1) through Icy Strait, and (2) through the lower end of Chatham Strait. No evidence was found of movement through Peril Strait from Salisbury Sound into Chatham Strait. The centers of density of each group of tags appeared to move in a consistent manner, but a smaller number of tags from each release were dispersed throughout the northern part of southeastern Alaska. Differences were noted between the movements of fish in odd and even years. Also a larger proportion of earlier tagged fish moved to recovery locations farther [sic] inland. In all areas and in all years the fishing season closed about the time of the greatest abundance of fish in the fishery, therefore the later parts of the runs were not studied. Apparently the 1941 run was the largest and that in 1945 the smallest. Migration rates were studied by plotting the catch per trap as well as by the recovery of tags. The latter showed movements of 9.05 to 33.37 miles per day. Survival rates computed for thirty releases with total tag recovery periods of two or more weeks averaged 0.384. Weekly exploitation rates varied from 0.142 to 0.452 averaging 0.250. The weekly F exponential rate of fishing averaged 0.514. Recoveries of tags from seines were not used since their proportion of tags recovered was less than one-half their proportion of the catch. Recommendations are made for future tagging experiments based upon the results of this analysis.

*Penaeid Shrimp Tagging Experiments in Louisiana, 1979* S. L. Hollaway, L. F. Sullivan, 1982 Penaeid shrimp mark and recapture studies in Louisiana, initiated in 1977, were continued through 1979 in cooperation with the Louisiana Department of Wildlife and Fisheries (LDWF) and Louisiana State University. Shrimp were tagged and released in Caillou Lake, Barataria Bay and offshore between Calcasieu Pass and Grand Isle. The major program objectives were designed to meet data needs identified as management priorities in the regional shrimp fishery management plan for the Gulf of Mexico (Christmas and Etzold, 1977). They included investigation of growth, mortality and movement patterns of offshore overwintering populations of white shrimp (*Penaeus setiferus*) and to expand inshore studies of brown shrimp (*P. aztecus*) in Louisiana's extensive and productive estuarine systems to include white shrimp. This report summarizes recovery data from shrimp marked and released in Louisiana waters during 1979. Individual recapture data, including distance travelled, days at large and change in length, are presented in Appendix I. Growth rate and mortality rate estimates are beyond the scope of this paper and will be reported elsewhere--Introduction

*The Role of Synaptic Tagging and Capture for Memory Dynamics in Spiking Neural Networks* Jannik Luboeinski, 2021-09-02 Memory serves to process and store information about experiences such that this information can be used in future situations. The transfer from transient storage into long-term memory, which retains information for hours, days, and even years, is called consolidation. In brains, information is primarily stored via alteration of synapses, so-called synaptic plasticity. While these changes are at first in a transient early phase, they can be transferred to a late phase, meaning that they become stabilized over the course of several hours. This stabilization has been explained by so-called synaptic tagging and capture (STC) mechanisms. To store and recall memory representations, emergent dynamics arise from the synaptic structure of recurrent networks of neurons. This happens through so-called cell assemblies, which feature particularly strong synapses. It has been proposed that the stabilization of such cell assemblies by STC corresponds to so-called synaptic consolidation, which is observed in humans and other animals in the first hours after acquiring a new memory. The exact connection between the physiological mechanisms of STC and memory consolidation remains, however, unclear. It is equally unknown which influence STC mechanisms exert on further cognitive functions that guide behavior. On timescales of minutes to hours (that means, the timescales of STC) such functions include memory improvement, modification of memories, interference and enhancement of similar memories, and transient priming of certain memories. Thus, diverse memory dynamics may be linked to STC, which can be investigated by employing theoretical methods based on experimental data from the neuronal and the behavioral level. In this thesis, we present a theoretical model of STC-based memory consolidation in recurrent networks of spiking neurons, which are particularly suited to reproduce biologically realistic dynamics. Furthermore, we combine the STC mechanisms with calcium dynamics, which have been found to guide the major processes of early-phase synaptic plasticity in vivo. In three included research articles as well as additional sections, we develop this model and investigate how it can account for a variety of behavioral effects. We find that the model enables the robust implementation of the cognitive memory functions mentioned above. The main steps to this are: 1. demonstrating the formation, consolidation, and improvement of memories represented by cell assemblies, 2. showing that neuromodulator-dependent STC can retroactively control whether information is stored in a temporal or rate-based neural code, and 3. examining interaction of multiple cell assemblies with transient and attractor dynamics in different organizational paradigms. In summary, we demonstrate several ways by which STC controls the late-phase synaptic structure of cell assemblies. Linking these structures to functional dynamics, we show that our STC-based model implements functionality that can be related to long-term memory. Thereby, we provide a basis for the mechanistic explanation of various neuropsychological effects. Keywords: synaptic plasticity; synaptic tagging and capture; spiking recurrent neural networks; memory consolidation; long-term memory

Second Experiment in Tagging Salmon in the Alaska Peninsula Fisheries Reservation, Summer of 1923 Charles Henry Gilbert, Willis Horton Rich, 1925

*Tagging* Gene Smith, 2007-12-27 Tagging is fast becoming one of the primary ways people organize and manage digital information. Tagging complements traditional organizational tools like folders and search on users desktops as well as on the web. These developments mean that tagging has broad implications for information management, information architecture and interface design. And its reach extends beyond these technical domains to our culture at large. We can imagine, for example, the scrapbookers of the future curating their digital photos, emails, ticket stubs and other mementos with tags. This book explains the value of tagging, explores why people tag, how tagging works and when it can be used to improve the user experience. It exposes tagging's superficial simplicity to reveal interesting issues related to usability, information architecture, online community and collective intelligence.

Delinquency and Juvenile Justice in American Society Randall G. Shelden, 2011-08-08 Extensively revised, the second edition blends theory, research, and applications into a superb overview of the complex issues surrounding juvenile delinquency and society's attempts to address juvenile crime. After providing an excellent historical foundation, Shelden presents the theories essential to understanding crime and delinquency. He then explores the system and its effects on juveniles and society, including comprehensive coverage of female delinquency. The social, legal, and political influences on how the public perceives juveniles and the inequality in U.S. society that affects families, communities, and schools are highlighted throughout the book. The concluding chapter looks at solutions that have worked and identifies trends in treating juvenile delinquency. The authors' almost four decades of teaching about and researching juveniles and the system make him eminently qualified to offer readers the tools necessary to think critically about delinquency and to evaluate the policies enacted to manage the juveniles who violate the laws. *Delinquency and Juvenile Justice in American Society, 2/E* provides affordable, up-to-date, easily accessible, and thorough analysis of a significant topic.

*Text, Speech and Dialogue* Petr Sojka, Ivan Kopecek, Karel Pala, 2006-09-08 Here are the refereed proceedings of the 9th International Conference on Text, Speech and Dialogue, TSD 2006. The book presents 87 revised full papers together with 2 invited papers reviewing state-of-the-art research in the field of natural language processing. Coverage ranges from theoretical and methodological issues to applications with special focus on corpora, texts and transcription, speech analysis, recognition and synthesis, as well as their intertwining within NL dialogue systems.
