Controlled Processing of Direct Readout Data from Weather Satellites Robert F. Myers,1970 Optimization of satellite pictures by standardizing the range of reflective density is accomplished by the use of a dynamic signal simulator which sweeps the amplitude of a 2400 Hz signal from 4 to -32 dBm providing a direct display of the crater tube current versus signal amplitude on an oscilloscope. The time required for setting up the standardizing function is reduced to a few minutes per day. Use of these techniques permits quantitative temperature measurements to be made from DRIR pictures with a densitometer. (Author).

Particle Image Velocimetry Ronald J. Adrian,Jerry Westerweel,2011 Particle image velocimetry, or PIV, refers to a class of methods used in experimental fluid mechanics to determine instantaneous fields of the vector velocity by measuring the displacements of numerous fine particles that accurately follow the motion of the fluid. Although the concept of measuring particle displacements is simple in essence, the factors that need to be addressed to design and implement PIV systems that achieve reliable, accurate, and fast measurements and to interpret the results are surprisingly numerous. The aim of this book is to analyze and explain them comprehensively.
