Another group of papers describe diverse applications of fuzzy logic, neural networks and hybrid intelligent systems in medical applications. There are also some papers that present theory and practice of neural networks in different areas of application. In addition, there are papers that present theory and practice of optimization and evolutionary algorithms in different areas of application. Finally, there are some papers describing applications of fuzzy logic, neural networks and meta-heuristics in pattern recognition problems.

Logic for Computer Science and Artificial Intelligence Ricardo Caferra,2013-02-04 Logic and its components (propositional, first-order,non-classical) play a key role in Computer Science and ArtificialIntelligence. While a large amount of information exists scatteredthroughout various media (books, journal articles, webpages, etc.),the diffuse nature of these sources is problematic and logic as atopic benefits from a unified approach. Logic for Computer Scienceand Artificial Intelligence utilizes this format, surveying thetableaux, resolution, Davis and Putnam methods, logic programming,as well as for example unification and subsumption. Fornon-classical logics, the translation method is detailed. Logic for Computer Science and Artificial Intelligence is theclassroom-tested result of several years of teaching at GrenobleINP (Ensimag). It is conceived to allow self-instruction for abeginner with basic knowledge in Mathematics and Computer Science,but is also highly suitable for use in traditional courses. Thereader is guided by clearly motivated concepts, introductions,historical remarks, side notes concerning connections with otherdisciplines, and numerous exercises, complete with detailedsolutions, The title provides the reader with the tools needed toarrive naturally at practical implementations of the concepts andtechniques discussed, allowing for the design of algorithms tosolve problems.

An Introduction to Many-Valued and Fuzzy Logic Merrie Bergmann,2008-01-14 Professor Merrie Bergmann presents an accessible introduction to the subject of many-valued and fuzzy logic designed for use on undergraduate and graduate courses in non-classical logic. Bergmann discusses the philosophical issues that give rise to fuzzy logic - problems arising from vague language - and returns to those issues as logical systems are presented. For historical and pedagogical reasons, three-valued logical systems are presented as useful intermediate systems for studying the principles and theory behind fuzzy logic. The major fuzzy logical systems - Lukasiewicz, Gödel, and product logics - are then presented as generalisations of three-valued systems that successfully address the problems of vagueness. A clear presentation of technical concepts, this book

includes exercises throughout the text that pose straightforward problems, that ask students to continue proofs begun in the text, and that engage students in the comparison of logical systems.

The Quantum Brain A. Stern,1994-03-03 While for the majority of physicists the problem of the deciphering of the brain code, the intelligence code, is a matter for future generations, the author boldly and forcefully disagrees. Breaking with the dogma of classical logic he develops in the form of the conversion postulate a concrete working hypothesis for the actual thought mechanism. The reader is invited on a fascinating mathematical journey to the very edges of modern scientific knowledge. From lepton and quark to mind, from cognition to a logic analogue of the Schrödinger equation, from Fibonacci numbers to logic quantum numbers, from imaginary logic to a quantum computer, from coding theory to atomic physics - the breadth and scope of this work is overwhelming. Combining quantum physics, fundamental logic and coding theory this unique work sets the stage for future physics and is bound to titillate and challenge the imagination of physicists, biophysicists and computer designers. Growing from the author's matrix operator formalization of logic, this work pursues a synthesis of physics and logic methods, leading to the development of the concept of infophysics. The experimental verification of the proposed quantum hypothesis of the brain is presently in preparation in cooperation with the Cavendish Laboratory, Cambridge, UK, and, if proved positive, would have major theoretical implications. Even more significant should be the practical applications in such fields as molecular electronics and computer science, biophysics and neuroscience, medicine and education. The new possiblities that could be opened up by quantum level computing could be truly revolutionary. The book aims at researchers and engineers in technical sciences as well as in biophysics and biosciences in general. It should have great appeal for physicists, mathematicians, logicians and for philosophers with a mathematical bent.
