Interactive Fortran IV Computer Programs for the Thermodynamic and Transport Properties of Selected Cryogens (fluids Pack) Robert D. McCarty, 1981

U.S. Department of Transportation Federal Motor Carrier Safety Administration Register , 2007

Fortran Programs for First Order Calculation of Properties of Beam Transport Systems , 1968 A set of FORTRAN functions and subroutines has been written to facilitate calculations, using matrix techniques, of the first order properties of ion-optical systems for particle accelerators. These functions and subroutines generate matrices for various magnetic elements used in ion-optical systems and also program various matrix manipulations. A subroutine to calculate the strength of magnetic quadrupoles required to achieve prescribed focal conditions is available. Functions used to calculate the maximum excursion of a particle trajectory from the optic axis in a magnetic element, to calculate the waist of a particle beam if the emittance satisfies certain conditions, and to calculate the location of the focal plane for an arbitrary ion-optical arrangement have been written. Programs can be written, using these functions and subroutines, to calculate the properties

of particular ion-optical systems. Illustrative coding shows how such programs are written. (Author).

The DSN and TDC Neutron Transport Codes B. Carlson, C. Lee, Jack Worlton, 1960 This report describes two reactor codes, one for the one-dimensional geometries (DSN) and the other for the finite cylindrical case (TDC), based on the transport difference equations and calculation methods developed in Numerical Solutions of Transient and Steady State Neutron Transport Problems (LA-2260). Appendices I and II, which contain the actual machine codes, have been separated from the descriptive part of the report to make it easier for the user to study the material and apply it to problems.

Computational Methods for Two-Phase Flow and Particle Transport Wen Ho Lee, 2013-03-22 This book describes mathematical formulations and computational methods for solving two-phase flow problems with a computer code that calculates thermal hydraulic problems related to light water and fast breeder reactors. The physical model also handles the particle and gas flow problems that arise from coal gasification and fluidized beds. The second part of this book deals with the computational methods for particle

transport.

The Beta Equilibrium, Stability, and Transport Codes Frances Bauer,2012-12-02
The Beta Equilibrium, Stability, and Transport Codes: Application to the Design of Stellarators covers the application of the BETA computer codes to the Heliotron E plasma confinement experiment. This book is the outgrowth of a collaboration between the Courant Institute at New York University and the Plasma Physics Laboratory at Kyoto University. After briefly dealing with the history of the codes and the design of new stellarator experiments, this five-chapter book goes on presenting 15 typical runs of the BETA equilibrium, stability, and transport codes. Included with each run is a statement relating the physics of the example to the computational model. The following chapters focus on the revisions of the BETA equilibrium code by implementing a simplified neoclassical transport theory defining the geometric confinement time output by the equilibrium code. The concluding chapter provides a FORTRAN listing of the transport code.

World War II Sea War, Vol 6: The Allies Halt the Axis Advance Donald A Bertke,Gordon Smith,Don Kindell,2014-05-17 Major Pacific actions from April through August 1942 include the Japanese attack on Ceylon, the Doolittle Raid on Japan, the battle

of the Coral Sea, the battle of Midway Island, the U.S. landing on Guadalcanal, the battle of Savo Island, and the battle of the eastern Solomon Islands. Arctic actions include battle for convoy PQ.17. In Mediterranean, the Royal Navy interdicts Axis supply lines along Libyan and Egyptian coasts. In the Atlantic, the U.S. implements convoys along the East Coast.

An Invariant Imbedding, Orders-of-scattering Approach to Particle Transport in a Slab John C. Garth,1976 A novel, simplified approach to particle transport in slabs is given. The number of particles transmitted and reflected by a slab of finite thickness is obtained as a function of the number of collisions the particles receive. This 'orders-of-scattering' solution is facilitated by an invariant imbedding approach which leads to a set of integral recursion relations between transmitted and reflected particle currents. Solutions are given for both one-dimensional and three-dimensional transport in slabs for an arbitrary anisotropic scattering law.

Public Transport Planning and Management in Developing Countries Ashish Verma, T.V. Ramanayya, 2014-12-17 Developing Countries Have Different Transportation Issues and Requirements Than Developed Countries An efficient transportation system is critical for a country's development. Yet cities in developing countries are typically characterized by high-density urban areas and poor public transport, as well as lack of proper roads, parking facilities, road user discipline, and control of land use, resulting in pollution, congestion, accidents, and a host of other transportation problems. Public Transport Planning and Management in Developing Countries examines the status of urban

transport in India and other developing countries. It explains the principles of public transport planning and management that are relevant and suitable for developing countries, addresses current transportation system inefficiencies, explores the relationship between mobility and accessibility, and analyzes the results for future use. Considers Socioeconomic and Demographic Characteristics It's projected that by 2030, developing nations will have more vehicles than developed nations, and automated guided transit (AGT) and other transport systems will soon be available in India. This text compares five cities using specific indicators—urbanization, population growth, vehicle ownership, and usage. It determines demographic and economic changes in India, and examines how these changes have impacted transportation demand and supply, transport policy and regulations, and aspects of economics and finance related to public transport. The authors emphasize preserving and improving existing modes, efficient use of the public transport management infrastructure, implementing proper planning measures, and encouraging a shift towards sustainable modes. They also discuss sustainability in terms of environment, energy, economic, and land use perspectives and consider the trends of motorization, vehicle growth, modal share, effects on mobility and environment, and transport energy consumption and emissions. Public Transport Planning and Management in Developing Countries addresses the growing resource needs and economics of public transport in developing countries, explains various aspects of public transport planning and management, and provides readers with a basic understanding of both urban and rural public transport planning and management in developing countries.

Facilitated Transport Membranes (FTMs) for CO₂ Capture: Overview and Future Trends Sarah Farrukh,Xianfeng Fan,Takeshi Matsuura,Syed Shujaat Karim,2023-02-13 This book highlights the importance of Facilitated Transport Membranes (FTMs) for the application of carbon capture, covering its introduction, gas transport phenomena and models, reaction mechanisms, industrial applications such as bio-gas upgradation, flue gas separation, hydrogen gas and natural gas purification, fabrication methods of both FTMs and their carrier mediums, testing/characterization techniques, techno-analysis with up-to-date trends and the future outlooks. Climate change and environmental impacts are resulted due to greenhouse gases, particularly CO₂. The industrial revolution is currently causing the augmented emission of greenhouse gases. Therefore, various technologies are being looked at to overcome these problems. In which, membrane technology is key among them and is envisaged for many industrial applications, especially for gas separations and carbon capture. Considering this, FTMs are being actively investigated due to their remarkable gas separation performance. This book describes the working principle of FTMs and includes case studies to explore their impact on different industrial applications. Also, the book highlights how FTMs are reshaping science to capture CO₂ for reducing climate and environmental impacts.
