Design of Tools for Deformation Processes T. Z. Blazynski,2012-12-06 Although the problem of tool design - involving both the selection of suitable geometry and material- has exercised the attention of metal forming engineers for as long as this industrial activity has existed, the approach to its solution has been generally that of the 'trial and error' variety. It is only relatively recently that the continuing expansion of the bulk metal-forming industry, combined with an increase in the degree of sophistication required of its products and processes, has focussed attention on the problem of optimisation of tool design. This, in turn, produced a considerable expansion of theoretical and practical investigations of the existing methods, techniques and concepts, and helped to systematise our thinking and ideas in this area of engineering activity. In the virtual absence, so far, of a single, encyclopaedic, but sufficiently deep, summation of the state of the art, a group of engineers and materials scientists felt that an opportune moment had arrived to try and produce, concisely, answers to many tool designers' dilemmas. This book attempts to set, in perspective, the existing - and proven - concepts of design, to show their respective advantages and weaknesses and to indicate how they should be applied to the individual main forming processes of rolling, drawing, extrusion and forging.

*Underground Writing* David Welsh,2010-05-04 The purpose of this book is to explore the ways in which the London Underground/ Tube was 'mapped' by a number of writers from George Gissing to Virginia Woolf. From late Victorian London to the end of the World War II, 'underground writing' created an imaginative world beneath the streets of London. The real subterranean railway was therefore re-enacted in number of ways in writing, including as Dantean Underworld or hell, as gateway to a utopian future, as psychological looking-glass or as place of safety and security. The book is a chronological study from the opening of the first underground in the 1860s to its role in WW2. Each chapter explores perspectives on the underground in a number of writers, starting with George Gissing in the 1880s, moving through the work of H. G. Wells and into the writing of the 1920s & 1930s including Virginia Woolf and George Orwell. It concludes with its portrayal in the fiction, poetry and art (including Henry Moore) of WW2. The approach takes a broadly cultural studies perspective, crossing the boundaries of transport history, literature and London/ urban studies. It draws mainly on fiction but also uses poetry, art, journals, postcards and posters to illustrate. It links the actual underground trains, tracks and stations to the metaphorical world of 'underground writing' and places the writing in a social/ political context.
