Horace B. Browne

Longboarder's Start-Up Doug Werner,1996-08-01 Design innovations and a new appreciation for the grace and poise of surfing a longer board has lifted the art of longboarding back into the limelight and more importantly, back into the minds of serious surfers who are looking to expand their wave riding experience. The first-half of this guide covers the basics of longboard equipment, wave selection, courtesy, and surfing technique through standing up. The second part gets into intermediate and advanced longboarding skills including: cross-stepping, trimming, turning, turning maneuvers, essential noseriding, and finally, some of the breathtaking tricks that the pros execute so flawlessly. The key points are brought home with a stripped down text and photos featuring some of the best longboard surfers on earth, including Ted Robinson, Colin McPhillips, Jeff Kramer and Mark Stewart.

Longboarding Mary-Lane Kamberg,2016-07-15 From its origins as a land-based alternative to surfing, one that incorporated the wheels and trucks used by skateboarders, longboarding, developed in Hawaii during the 1950s, has come a long way. In the 1970s, when the sport was seen as a form of self-expression, it was more of a do-it-yourself hobby. Today, longboarding is bigger than ever. This book describes the sport's history, gives riders an idea of how to choose their equipment and begin practicing this unique sport. From mere transportation, to obstacle slalom, freeriding, dancing, and freestyling, readers will be impressed with the many styles of this ever-changing pastime.

Building and Using Binoscopes Norman Butler, 2014-10-25 Provides easy to understand information and guidelines about the design and construction of binoscopes Focusing on both homemade and commercial products, this book provides the reader with simple and straightforward information about the modelling and building of binoscopes. Binoscopes can be thought of as binoculars enlarged to the size of telescopes: essentially, a combination of the two. Constructing a binoscope is easier than most people think, but it still demands attention to detail and proper background knowledge. The author goes on to provide additional information about how to understand the products currently on the market, should the reader choose to purchase a binoscope instead of building one. Lastly, the book also compares binoscopes with telescopes in great detail, outlining the differences the reader can expect to see in the night sky from using both. The celestial views obtained with a binoscope, compared to a single telescope of the same aperture, are a very different experience and well worth the effort.
