Bursting The Bubble - The Story of Being 'Lost Without Her': A journey of growing through tragedy & loss Mark Oborn ,2020-08-01 This book is for you if you have lost a 'significant other'. This book is for you if you find yourself on a journey through grief, or are supporting someone else through their journey. The book charts my first year of being a widower, its chapters are a series of blog posts I wrote immediately after my beautiful wife, Claire, died. This book is ordered chronologically by days, then weeks then months, this allows you to dip into any time after your event which feels relevant to you and see what I was saying and thinking at that same time. Each blog post I wrote and therefore each chapter in this book is tagged, the website is searchable by each of those tags and I've used the same tags here for each chapter. The tags represent feelings, emotions and events. If you go to the index at the back of the book you can find those tags or themes and discover which of the chapters/blog posts will be most relevant to how you are feeling right now. As with the blog, I feel like I'm with you on your journey as you read this book... Just know you are not alone.

Popeye the Sailor: The 1960s TV Cartoons Fred M. Grandinetti,2022-02-28 Following the surprising popularity of the theatrical Popeye cartoons on television in the mid-1950s, King Features Syndicate quickly went into production on new made-for-TV cartoons to capitalize on that success. Under the supervision of Producer Al Brodax, 220 new cartoons were created by six different animation studios, including one overseen by former Disney animator Jack Kinney, and Paramount Cartoon Studios (whose staff had worked on the theatrical Popeye cartoons). They appeared on television beginning in 1960. Many of these cartoons featured excellent (though limited) animation, imaginative storytelling, and even occasional self-referential humor. Several stories were adapted from E.C. Segar's Thimble Theatre newspaper comics, and characters that had first appeared there (such as The Sea Hag, and Alice the Goon) would make their animation debut. The best-known voice artists from the theatrical Popeye cartoons — Jack Mercer, Mae Questel, and Jackson Beck (now playing Brutus, instead of Bluto) — each reprised their roles. However, several of these cartoons were poorly animated, with errors and inconsistent character designs, and too reliant on reused animation. This has given the series a reputation — perhaps unfairly — of poor quality. While casting a critical eye, this book will encourage appreciation of the better films of the series. These new made-for-TV Popeye cartoons were a terrific success and continued to appear on television for more than 30 years. They remain a beloved memory of childhood TV viewing.

Physics and the Modernist Avant-Garde Rachel Fountain Eames,2023-02-09 Developing a reading of modernist poetics centred on the three-way relationship between literature, modern physics and avant-garde art movements, this book focuses on four key poets – William Carlos Williams, Mina Loy, the Baroness Elsa von Freytag-Loringhoven and Wallace Stevens – whose lives crossed paths in 20th-century New York. This book explores how modernist art movements have shaped these writers' thinking about physics in relation to their work, demonstrating how science's new ideas about measurement and how to visualize material reality provoked innovative poetic forms and images. From Einstein's visit to New York City in 1921 to the impact of the atomic bomb, the author traces the flow of ideas about physics through culture, linking the new physics with modern approaches to art found in Cubism, Futurism, Dada and Surrealism.

Winning with Risk Management Russell Walker,2013 This book develops the notion that companies can succeed on the basis of risk management, much as companies compete on efficiency, costs, labor, location, and other dimensions. The reality of risk and how it impacts companies is that it is much more definite, often catastrophic and looks more like a shock. This is striking, as a difference between firms on risk different than a marginal difference in operating efficiencies, for example. Competing on Risk Management requires a discipline, a commitment to using information and recognizing shocks and then acting upon those to redistribute assets. This book will examine how leading firms that compete on risk have done this and showcase best practices and impacts to the capital structure of firms and their organizational formation.

The Bubble Universe: Psychological Perspectives on Reality Eugene Subbotsky, 2020-07-28 This book examines the role that human subjective experience plays in the creation of reality and introduces a new concept, the Bubble Universe, to describe the universe as it looks from the subjective viewpoint of an individual. Drawing on a range of research, the author questions the extent to which the scientific study of the origins of life, consciousness and subjective experience is itself influenced by scientists' subjective worlds. The author argues that in many respects the Bubble Universe differs from the universe as described by science and religion, and analyzes these differences. The fabric and structure of subjective reality is described, and various aspects of the Bubble Universe are examined, including science, religion, life, morality and history. The differences between the views from inside the subjective universe and from scientific, religious and sociocultural versions of the universe are outlined, and their significance for practical and theoretical problems are highlighted and illustrated with psychological experiments. This book will be of value to all scholars interested in how subjectivity influences research and appeal in particular to those working in developmental and theoretical psychology, consciousness, epistemology, phenomenology, and the philosophy of science and of the mind.

The Mobile Audience Martin Rieser, 2011 The convergence of mobile technologies and ubiquitous computing is creating a world where information-rich environments may be mapped directly onto urban topologies. This book tracks the history and genesis of locative and wearable media and the ground-breaking work of pioneer artists in the field. It examines changing concepts of space and place for a wide range of traditional disciplines ranging from Anthropology, Sociology, Fine Art and Architecture to Cultural and Media Studies, Fashion and Graphic design. Mobile and Pervasive media are beginning to proliferate in the landscape of computer mediated interaction in public space through the emergence of smartphone technologies such as the iPhone, cloud computing extended wifi services and the semantic web in cities. These dispersed forms of interaction raise a whole series of questions on the nature of narrative and communication, particularly in relation to an audience's new modes of mobile participation and reception. These issues are explored through a series of focused essays by leading theorists, seminal case studies and practitioner interviews with artists at the cutting edge of these technologies, who are extending the potential of the medium to enhance and critique technological culture. By emphasizing the role of the audience in this nomadic environment, the collection traces the history and development of 'ambulant' artistic practice in this new domain, creating an essential handbook for those wishing to understand the dominant global technology of the 21st Century and its implications for Art, Culture and Audience.

Processing of Solid-Liquid Suspensions P. Ayazi Shamlou, 2016-08-10 Processing of Solid-Liquid Suspensions is a collection of articles from several industrialists and academicians who are active in fundamental and applied research relating to handling and processing of particles in liquids. This collection of papers deals with the processes of interaction of particles with each other, with the surrounding liquid and process equipment, whereby knowledge of the mechanism of these interactions can be a sound basis for improving the design of the process equipment and create an optimum environment for the formation and processing of the particulate. The above notion is explained through analysis of the role of turbulent aggregation and breakup of particles in the formation of many solid products from aqueous solutions. This book also analyzes particle size and particulate crystals, whether as final products or as intermediates during processing. In the purification of proteins, two essential units of operation are used; precipitation and solid-liquid separation are analyzed, where theoretical considerations are reviewed. This text also discusses the application of model suspensions in the design of aerobic fermenters in practical industrial uses. High concentration of suspension preparations and solid suspension in liquid flourized beds or in stirred vessels are explained in more detail as to how these affect certain industries. This selection finally presents the progress made in developing design and methods needed by industry. Researchers, chemists, and scientists in industry, as well as advanced students with interests in formation and processing of stable suspensions and in advanced process engineering courses will find this textbook a valuable aid.

Digital Triage Forensics Stephen Pearson, Richard Watson, 2010-07-13 Digital Triage Forensics: Processing the Digital Crime Scene provides the tools, training, and techniques in Digital Triage Forensics (DTF), a procedural model for the investigation of digital crime scenes including both traditional crime scenes and the more complex battlefield crime scenes. The DTF is used by the U.S. Army and other traditional police agencies for current digital forensic applications. The tools, training, and techniques from this practice are being brought to the public in this book for the first time. Now corporations, law enforcement, and consultants can benefit from the unique perspectives of the experts who coined Digital Triage Forensics. The text covers the collection of digital media and data from cellular devices and SIM cards. It also presents outlines of pre- and post-blast investigations. This book is divided into six chapters that present an overview of the age of warfare, key concepts of digital triage and battlefield forensics, and methods of conducting pre/post-blast investigations. The first chapter considers how improvised explosive devices (IEDs) have changed from basic booby traps to the primary attack method of the insurgents in Iraq and Afghanistan. It also covers the emergence of a sustainable vehicle for prosecuting enemy combatants under the Rule of Law in Iraq as U.S. airmen, marines, sailors, and soldiers perform roles outside their normal military duties and responsibilities. The remaining chapters detail the benefits of DTF model, the roles and responsibilities of the weapons intelligence team (WIT), and the challenges and issues of collecting digital media in battlefield situations. Moreover, data collection and processing as well as debates on the changing role of digital forensics investigators are explored. This book will be helpful to forensic scientists, investigators, and military personnel, as well as to students and beginners in forensics. Includes coverage on collecting digital media Outlines pre- and post-blast investigations Features content on collecting data from cellular devices and SIM cards

Direct and Large Eddy Simulation XII Manuel García-Villalba,Hans Kuerten,Maria Vittoria Salvetti,2020-05-09 This book gathers the proceedings of the 12th instalment in the bi-annual Workshop series on Direct and Large Eddy Simulation (DLES), which began in 1994 and focuses on modern techniques used to simulate turbulent flows based on the partial or full resolution of the instantaneous turbulent flow structure. With the rapidly expanding capacities of modern computers, this approach has attracted more and more interest over the years and will undoubtedly be further enhanced and applied in the future. Hybrid modelling techniques based on a combination of LES and RANS approaches also fall into this category and are covered as well. The goal of the Workshop was to share the state of the art in DNS, LES and related techniques for the computation and modelling of turbulent and transitional flows. The respective papers highlight the latest advances in the prediction, understanding and control of turbulent flows in academic and industrial applications.
