Cell-Cell Interactions in the Release of Inflammatory Mediators Patrick Y-K Wong,Charles N. Serhan,2012-12-06 This volume constitutes. in part. the proceedings of the symposium on Cell-Cell Interaction and Release of Inflammatory Mediators organized by Drs. Patrick Y-K Wong and Charles N. Serhan and presented at the FASEB meeting in Washington. D.C. in April. 1990. It contains chapters by the symposium speakers as well as contributions from investigators in this field. Readers will find exciting advances in this volume. which contains chapters dedicated to state-of-the-art knowledge in the field of Cell-Cell Interaction and the functions of released mediators in inflammatory diseases. This book includes cutting edge investigations on transcellular eicosanoid biosynthesis. cytokines. PAF, and adhesion as well as interactions of inflammatory cells with endothelium and kidney. Also. the control and regulation of renal function by lipid mediators generated during cell-cell interactions between renal mesangial cells and leukocytes has generated insight into the cell biology and regulatory role of these mediators in the kidney. Moreover. the relationship between these areas is discussed in sequelae of both asthmatic and renal diseases. We hope that some of the enthusiasm and excitement present in this research are also evident here and that this volume will serve as a reference for researchers. teachers. and students to survey this rapidly growing field.

Druggable Lipid Signaling Pathways Yasuyuki Kihara,2020-09-07 Lipids are responsible not just for constituting cellular membrane but also for storing energy, transducing signaling, and modifying proteins. Bioactive lipids, or lipid mediators, transduce signaling as intracellular messenger like phosphoinositides, and also regulate cell-cell communication through G protein-coupled receptors (GPCRs) that are potentially valuable drug targets in many diseases. Until now, about 40 GPCRs within ~300 rhodopsin-like (class A) GPCRs, are identified as lipid GPCRs. Advances of lipid research have enabled to develop novel small molecules targeting lipid GPCRs for several diseases. Most notably, fingolimod (FTY720), a sphingosine 1-phosphate (S1P) receptor modulator, became the first FDA-

approved medicine as an orally bioavailable drug for treating relapsing forms of multiple sclerosis (MS). In addition to fingolimod, other drugs targeting lipid GPCRs had been developed such as latanoprost (prostaglandin F2a analogue, used for ocular hypertension and glaucoma), epoprostenol and treprostinil (prostaglandin I2 analogue, used for pulmonary arterial hypertension), montelukast and pranlukast (cysteinyl leukotriene receptor antagonist, used for asthma and allergies), etc. Novel drugs are also expected like lysophosphatidic acid (LPA) receptor antagonist for treatment of pulmonary fibrosis. Drug development targeting lipid signalling pathways are backdated to more than a century, when aspirin was synthesized and selling by Bayer, while the basic mechanism of aspirin's effects (block prostanoid synthesis by inhibiting cyclooxygenases) had not been discovered until 1970s. Nowadays, non-steroidal anti-inflammatory drugs (NSAIDs) like aspirin and ibuprofen are commonly used as antipyretic analgesics and available readily over-the-counter oral drugs. Both upstream and downstream enzymes, such as phospholipase A2s and prostaglandin E synthases, respectively, are also potential therapeutic targets for inflammatory diseases. Recent studies of lipid metabolism expand the lipid biology field from pro-inflammatory lipid mediators to anti-inflammatory epoxy fatty acids (epoxyeicosatrienoic acids), and also omega-3 fatty acid-derived pro-resolving lipid mediators (lipoxin, resolvins, and neuroprotectin). These bioactive lipids, their metabolic pathways and receptors are of great interest in developing next-generation anti-inflammatory and pro-resolving drugs for a wide variety of diseases including. This book summarizes not only historical overview of lipid signaling pathways but also provides summary of cutting-edge studies that may provide some hints of novel "druggable" lipid signaling targets.

US Navy F-14 Tomcat Units of Operation Iraqi Freedom Tony Holmes,2012-11-20

Since the limited Desert Fox campaign against Iraq in December 1998, the Tomcat has been integral to virtually all combat operations involving the US Navy in the Arabian Gulf. Indeed, on every carrier deployment to the Persian Gulf since Desert Fox, the F-14 unit(s) on station has ventured into 'The Sand Box' over southern Iraq and prosecuted targets operating in contravention to United Nations security council resolutions. This book covers the F-14 Operation Iraqi Freedom actions against battlefield targets and integrated air defence sites, command and control centres, regime leadership targets and military installations in Baghdad, Tikrit, Mosul and Kirkuk.

Cellular Lipid in Health and Disease James Mukasa Ntambi,2023-08-21 Cellular Lipid in Health and Disease presents a comprehensive and systematic coverage of the various roles lipids play in human biology. This book is organized in four parts covering the foundational concepts of lipid biology all the way to the therapeutic opportunities they present. The first part is dedicated to the basic concepts of cellular lipid, the roles it plays in the cell, structure and physiology, regulation mechanisms, storage, and utilization. The second part is focused on lipid metabolism, covering the organelles involved in lipid trafficking, metabolism in aging, cholesterol homeostasis, lipid droplets (LDs), and lipid oxidation. Part three is dedicated to the roles lipids play in specific disease states including renal, metabolic, cardiovascular, and fatty liver diseases. Other conditions include cancer, neurodegenerative diseases, and the intricate relationship between cellular lipids and autophagy. The final part covers therapeutic opportunities, including drug carrier systems, modeling lipid metabolism, and prevention therapeutics. Cellular Lipid in Health and Disease is a complete reference targeted at graduate students and early career researchers in cell biology, biochemistry, and pharmacology. Research physicians can also benefit from the foundational content and links to pathologies and therapeutic opportunities. Offers a

complete and systematic coverage of lipid biology Provides foundational content and establishes the needed connections to translational aspects of the research in this area Includes chapters on the therapeutic opportunities presented by lipids

Cellular Metabolism of the Arterial Wall and Central Nervous System Gotthard Schettler,Heiner Greten,Andreas J.R. Habenicht,2012-12-06 International experts review the molecular biology of ion channels, diseases of the central nervous system including Alzheimer's disease, the molecular biology of atherogenesis, plasma lipoproteins, lipid transport, long chain fatty acid transport and metabolism, and lipoprotein receptors. Future directions and perspectives and common features in these important areas are discussed.

Invertebrate Learning and Memory Randolph Menzel,Paul Benjamin,2013-06-18 Understanding how memories are induced and maintained is one of the major outstanding questions in modern neuroscience. This is difficult to address in the mammalian brain due to its enormous complexity, and invertebrates offer major advantages for learning and memory studies because of their relative simplicity. Many important discoveries made in invertebrates have been found to be generally applicable to higher organisms, and the overarching theme of the proposed will be to integrate information from different levels of neural organization to help generate a complete account of learning and memory. Edited by two leaders in the field, Invertebrate Learning and Memory will offer a current and comprehensive review, with chapters authored by experts in each topic. The volume will take a multidisciplinary approach, exploring behavioral, cellular, genetic, molecular, and computational investigations of memory. Coverage will include comparative cognition at the behavioral and mechanistic level, developments in concepts and methodologies that will underlie future advancements, and mechanistic examples from the most important vertebrate systems (nematodes, molluscs, and insects). Neuroscience researchers and graduate students with an interest in the neural control of cognitive behavior will benefit, as will as will those in the field of invertebrate learning. Presents an overview of invertebrate studies at the molecular / cellular / neural levels and correlates findings to mammalian behavioral investigations Linking multidisciplinary approaches allows for full understanding of how molecular changes in neurons and circuits underpin behavioral plasticity Edited work with chapters authored by leaders in the field around the globe – the broadest, most expert coverage available Comprehensive coverage synthesizes widely dispersed research, serving as one-stop shopping for comparative learning and memory researchers
