The Garden of Delights Fiona J. Griffiths, 2011-06-03 In *The Garden of Delights*, Fiona J. Griffiths offers the first major study of the *Hortus deliciarum*, a magnificently illuminated manuscript of theology, biblical history, and canon law written both by and explicitly for women at the end of the twelfth century. In so doing she provides a brilliantly persuasive new reading of female monastic culture. Through careful analysis of the contents, structure, and organization of the *Hortus*, Griffiths argues for women's profound engagement with the spiritual and intellectual vitality of the period on a level previously thought unimaginable, overturning the assumption that women were largely excluded from the renaissance and reform of this period. As a work of scholarship that drew from a wide range of sources, both monastic and scholastic, the *Hortus* provides a witness to the richness of women's reading practices within the cloister, demonstrating that it was possible, even late into the twelfth century, for communities of religious women to pursue an educational program that rivaled that available to men. At the same time, the manuscript's reformist agenda reveals how women engaged the pressing spiritual questions of the day, even going so far as to criticize priests and other churchmen who fell short of their reformist ideals. Through her wide-ranging examination of the texts and images of the *Hortus*, their sources, composition, and function, Griffiths offers an integrated understanding of the whole manuscript, one which highlights women's Latin learning and orthodox spirituality. *The Garden of Delights* contributes to some of the most urgent questions concerning medieval religious women, the interplay of gender, spirituality, and intellectual engagement, to discussions concerning women scribes and writers, women readers, female authorship and authority, and the visual culture of female communities. It will be of interest to art

historians, scholars of women's and gender studies, historians of medieval religion, education, and theology, and literary scholars studying questions of female authorship and models of women's reading.

*Digital Video and HD* Charles Poynton,2003 & Quot;Digital Video and HDTV Algorithms and Interfaces covers the theory and engineering of digital video systems in a manner that is equally accessible to video engineers and computer graphics practitioners. It provides succinct and accurate treatment of standard-definition television (SDTV), high-definition television (HDTV), and compression systems. & quot;--BOOK JACKET.

*B[e] Stars* Anne Marie Hubert,Carlos Jaschek,2013-06-29 The idea of having a meeting came to the Editors when working on several aspects of galactic Be and B[e] stars. They found that a general summary of the properties of B[e] stars was missing, so that the organization of a first meeting on these objects appeared as very useful. B[e] stars have hydrogen line emission and forbidden [Fe II] and [O I] emission lines in their spectra; they are also characterized by a strong IR excess due to circumstellar dust. Having a large amount of extinction in the UV and the visual they have been less frequently observed than other emission line objects. Although about one hundred galactic objects have been classified as B[e], only fifteen or so have been studied in some detail. Besides this, the evolutionary status of these objects is rather controversial, are they pre-main sequence or stars on the way to become nuclei of planetary nebulae? Other difficult problems appear when considering the relations of these stars with other similar groups, like Herbig AeBe stars, Be, luminous blue variables and the superluminous B[e] stars observed in the Magellanic Clouds. The conference

seems timely since large surveys like DENIS and 2Mass, plus new space and new instruments for the micron, millimeter and centimeter wavelength region will result in the discovery of more stars of this group.

*High Definition Television* NHK, Science & Technology, 2012-12-06 Hi-Vision is a new television system that Japan has already begun in some of these is the first to propose to the world. It has long areas. been in development by NHK (the Japanese Broadcasting Corporation). In view of these developments, it is significant that a book that systematically deals with itself is becoming well-known worldwide. Hi-Vision technologies is being published. Until NHK has been involved in the research and now there has not been any publication that addresses development of a high-definition television system equally dealt with Hi-Vision technologies, and then for almost twenty years. Over this period, students and engineers interested in the subject the project has moved from basic visual, audio have had to sift through numerous journals and literary and psychological research to the development of experimental and broadcast quality. Believing that there was now a need to system equipment. With practical implementation near to present the results of a quarter century at hand, a considerable amount of equipment is under research and development, the NHK Science now already on the market. Furthermore, efforts since and Technical Research Laboratories decided are underway to commercialize the technology to compile this volume. Each section has been by improving the performance of household and written by the research staff members directly broadcast systems and establishing an internal involved in the project and knowledgeable in technical standard. the latest developments.

**High Definition Postproduction** Steven E. Browne, 2013-07-18 \* Real-world postproduction paths show how it's being done today \* Numerous HD tables clear up what format is used for which

purpose \* Ample information on HDV \* Debunks myths and answers common questions about HD  
Avoid costly missteps in postproduction and get it right the first time with this book. Written by an in-the-trenches professional who works with HD every day, High Definition Postproduction is an overview of this exciting opportunity for film and video production and postproduction professionals. High Definition production and editing is here and definitely a reality. High-def network shows are aired on a weekly basis. Several HD-only channels are well into their production schedules. HD is even used for major film productions and post production processes. However, unlike the existing 4x3, NTSC format, the HD world has many variables. This ability to choose various frame rates, frame sizes, bit rates, and color space options makes this an exciting, yet somewhat daunting challenge. The future may hold even more options as electronics continue to evolve and manufactures continue to exploit this format. Naturally, all of these options can lead to confusion and errors. This book begins with an overview of the HD format and then covers commonly-asked questions. A chapter on shooting details how to smooth the path for post. Postproduction workflows, including the digital intermediate, are covered in great detail, and are enhanced by real-world examples. From HDV to the high-end cameras used in Star Wars and Sin City, this book is your complete guide to HD.

**High Definition Television** Philip J. Cianci, 2014-01-10 The 40-year history of high definition television technology is traced from initial studies in Japan, through its development in Europe, and then to the United States, where the first all-digital systems were implemented. Details are provided about advances in HDTV technology in Australia and Japan, Europe's introduction of HDTV, Brazil's innovative use of MPEG-4 and China's terrestrial standard. The impact of HDTV on broadcast facility conversion and the influx of computer systems and information technology are described, as well as

the contributions of the first entrepreneurial HD videographers and engineers. This thoroughly researched volume highlights several of the landmark high-definition broadcasts from 1988 onward, includes input gathered from more than 50 international participants, and concludes with the rollout of consumer HDTV services throughout the world.

Zech,2013-12-14 Astronomy and Astrophysics Abstracts aims to present a comprehensive documenta tion ofthe literatme concerning all aspects of astronomy, astrophysics, and their border fields. It is devoted to the recording, summarizing, and indexing of the relevant publications throughout the world. Astronomy and Astrophysics Abstracts is prepared by a special department of the Astronomisches Rechen-Institut under the auspices of the International Astronomical Union. Volume 40 records literatme published in 1985 and received before February 15, 1986. Some older documents which we received late and which arenot surveyed in earlier volumes are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organiza tions, observatories, and publishers which

provide us with complimentary copies of their publications. Starting with Volume 33, all the recording, correction, and data processing work was done by means of computers. The recording was done by our technical staff members Ms. Helga Ballmann, Ms. Mona El-Choura (t), Ms. Monika Kohl, Ms. Sylvia Matyssek, Ms. Karir Burkhardt, Ms. Susanne Schlötelburg, Mr. Martin Schlötelburg, and Mr. Stefan Wagner supported our task by careful proof reading. **The Hot Universe** Katsuji Koyama, Shunji Kitamoto, Masayuki Itoh, 2012-12-06 The present decade is opening new frontiers in high-energy astrophysics. After the X-ray satellites in the 1980's, including Einstein, Tenma, EXOSAT and Ginga, several satellites are, or will soon be, simultaneously in orbit offering spectacular advances in X-ray imaging at low energies (ROSAT, Yohkoh) as well as at high energies (GRANAT), in spectroscopy with increased bandwidth (ASCA, SAX), and in timing (XTE). While these satellites allow us to study atomic radiation from hot plasmas or energetic electrons, other satellites study nuclear radiation at gamma-ray energies (CGRO) associated with radioactivity or spallation reactions. These experiments show that the whole universe is emitting radiation at high energies, hence we call it the hot universe. The hot universe, preferentially emitting X- and gamma-rays, provides us with many surprises and much information. A symposium The Hot Universe was held in conjunction with the XXIIIrd General Assembly of the International Astronomical Union, at Kyoto on August 26-30 in 1997. The proceedings are organized as follows. Synthetic view of the hot universe is discussed in Section 1, Plasma and Fresh Nucleosynthesis

Phenomena. Timely discussions on the strategy for future missions Future Space Program are found in Section 2. Then the contents are divided into two major subjects: the compact objects and thin hot diffuse plasmas. Section 3 is devoted to the category of compact objects which includes white dwarfs, neutron stars, and gravitationally collapsed objects: stellar mass black holes or active galactic nuclei.

*Literature 1997, Part 1* Astronomisches Rechen-InstitutARI,2013-11-11 Astronomy and Astrophysics Abstracts is devoted to the recording, summarizing and indexing of astronomical publications throughout the world. Two volumes are scheduled to appear per year. Volume 67 records 10,903 papers covering besides the classical fields of astronomy and astrophysics such matters as space flights related to astronomy, lunar and planetary probes and satellites, meteorites and interplanetary matter, X rays and cosmic rays, quasars and pulsars. The abstracts are classified under more than one hundred subject categories thus permitting quick surveying of the bulk of material published on the same topic within six months. For instance, this volume records 119 papers on minor planets, 155 papers on supernovae, and 554 papers on cosmology.

*Post-AGB Objects as a Phase of Stellar Evolution* R. Szczerba,S.K. Górny,2013-03-09 The term proto-planetary nebulae (PPNe) in the context of the late stages of stellar evolution was created only slightly more than 20 years ago to express the belief that in the near future these objects will become planetary nebulae (PNe). The first proto-planetary nebulae (called also post-Asymptotic Giant Branch, or shortly post-AGB objects) AFGL 2688 and AFGL 618 were discovered in mid seventies in course of the Air Force Sky Survey. Investigation of this phase of stellar evolution developed very rapidly in 1980's after the IRAS mission when it became clear that proto-planetary

nebulae emit a significant part of their energy in the mid-and far-infrared. Hundreds of new candidates have been proposed but the recognition of the real proto-planetary nebulae is not a simple task and needs a substantial effort to exclude cases that represent different evolutionary stages. High resolution spectroscopy of stellar atmospheres is of much importance in this respect. Surprisingly, only a small group of central stars, the so called 21 11m emitters, show chemical signatures of the 3 rd dredge up process. Very recently, a more detailed studies of mid-infrared spectra from the Infrared Space Observatory (ISO) allow for a better understanding of chemical composition and evolution of circumstellar material around these stars. A new impetus in the field of proto-planetary nebulae research was started in the 1990's with high spatial resolution imaging in mid-infrared and optical wavelength ranges.

Digital Transmission Systems David R. Smith, 1993-02-28 This fully updated edition of the classic reference in its field keeps professionals current with the latest technology and techniques in transmission of digital signals. Unlike other references on the subject, this volume is written specifically for engineers and focuses on practical systems and their application in actual design and implementation. It covers systems used throughout the world in chapters detailing the latest on basic system design, baseband transmissions, and digital radio and cable systems. Every chapter from the previous edition has been updated, and new information has been added on: Fiber-optic transmission and digital transmission networks; New digital transmission networks - including private-line, public, and personal communication networks - and integrated services digital networks; Trellis-coded modulation, spread spectrum, digital cross-connect systems, and source codes. Areas covered include analog-to-digital conversion, time-division multiplexing, digital modulation, network synchronization, and how to test, monitor, and control transmission systems.

Extensive design examples and references drawn from common carriers, manufacturers, and the author's own experience clarify real-life applications in actual systems. The latest standards published by the CCITT, CCIR, and ANSI are provided, and many new sample problems in each chapter build understanding and expertise. Since digital transmission is used by virtually all communications systems today, this new edition is an essential reference for all engineers, operators, supervisors, and managers who work in systems testing, operations, maintenance, planning, and research and development. It will also meet the needs of students taking digital communications courses.
