Racing the Beam Nick Montfort,Ian Bogost,2020-02-25 A study of the relationship between platform and creative expression in the Atari VCS, the gaming system for popular games like Pac-Man and Star Wars: The Empire Strikes Back. The Atari Video Computer System dominated the home video game market so completely that "Atari" became the generic term for a video game console. The Atari VCS was affordable and offered the flexibility of changeable cartridges. Nearly a thousand of these were created, the most significant of which established new techniques, mechanics, and even entire genres. This book offers a detailed and accessible study of this influential video game console from both computational and cultural perspectives. Studies of digital media have rarely investigated platforms—the systems underlying computing. This book, the first in a series of Platform Studies, does so, developing a critical approach that examines the relationship between platforms and creative expression. Nick Montfort and Ian Bogost discuss the Atari VCS itself and examine in detail six game cartridges: Combat, Adventure, Pac-Man, Yars' Revenge, Pitfall!, and Star Wars: The Empire Strikes Back. They describe the technical constraints and affordances of the system and track developments in programming, gameplay, interface, and aesthetics. Adventure, for example, was the first game to represent a virtual space larger than the screen (anticipating the boundless virtual spaces of such later games as World of Warcraft and Grand Theft Auto), by allowing the player to walk off one side into another space; and Star Wars: The Empire Strikes Back was an early instance of interaction between media properties and video games. Montfort and Bogost show that the Atari VCS—often considered merely a retro fetish object—is an essential part of the history of video games.

Hay otro partido Claudio Destéfano,2011-09-01 Un recorrido por estrategias, historias y perlas imperdibles sobre la asociación entre marcas y deportes. En el mundo del deporte, paralelamente al encuentro que transcurre en la cancha, hay otro partido, del que no siempre somos conscientes:

es el que juegan las marcas que asocian sus estrategias de marketing a las competencias deportivas. Es un match que se disputa dentro y fuera del estadio, y del que participan mucho más que dos contendientes. En él se dan clásicos, como el de las gaseosas o el de las marcas de indumentaria deportiva, que nada tienen que envidiarle a un Boca-River, un Barcelona-Real Madrid o un Nadal-Federer. En esta oportunidad, Claudio Destéfano pone en práctica su reconocida capacidad para captar esos detalles que hacen la diferencia en el mundo de las marcas, para revelarnos los entretelones de ese otro partido. Y lo hace de manera novedosa, vinculando los relatos del libro con el primer museo virtual del marketing deportivo (hayotropartido.com.ar), donde el lector tendrá acceso a singulares imágenes que se relacionan con estas historias. Pasen, vean, toquen y disfruten las piezas exhibidas, que verdaderamente son de colección.

Question of the Week Catherine Valentino,1985 SUMMARY: Designed to foster the development of science comprehension and basic science thinking skills in grades 5-8.

Culture and Neural Frames of Cognition and Communication Shihui Han,Ernst Pöppel,2011-01-06 Cultural neuroscience combines brain imaging techniques such as functional magnetic resonance imaging and event-related brain potentials with methods of social and cultural psychology to investigate whether and how cultures influence the neural mechanisms of perception, attention, emotion, social cognition, and other human cognitive processes. The findings of cultural neuroscience studies improve our understanding of the relation between human brain function and sociocultural contexts and help to reframe the “big question” of nature versus nurture. This book is organized so that two chapters provide general views of the relation between biological evolution, cultural evolution and recent cultural neuroscience studies, while other chapters focus on several aspects of human cognition that have been shown to be strongly influenced by sociocultural factors such as self-concept representation, language processes, emotion, time perception, and decision-making. The main goal of this work is to address how thinking actually takes place and how the underlying neural mechanisms are affected by culture and identity.
