100 Years of Radio in South Africa, Volume 1

Sisanda Nkoala, Gilbert Motsaathebe, 2024-01-28 The book brings together media scholars and practitioners to deliberate on the role and influence of radio broadcasting in South Africa over the past 100 years. The publication will add to the existing body of knowledge on radio in this context by being among one of the few to consider radio broadcasting in South Africa. Essentially, the book will make a distinct contribution by providing the following: a historical account of the development of the sector, an in-depth look at some of the key people and institutions that have shaped the sector, and a critique of the medium's role in community-building and culture making among others. While the book will provide relevant theoretical frameworks, it also aims to include the voices of media practitioners who can reflect on the importance of this medium from a more realistic perspective. Volume 1 focuses on South African radio stations and broadcasters in the past and present.

Dark Matter in Astro- and Particle Physics

Hans-Volker Klapdor-Kleingrothaus, Raoul D. Viollier, 2012-12-06 The Fourth HEIDELBERG International Conference on Dark Matter in Astro and Particle Physics, DARK2002, was held in Cape Town, South Africa, in the period 4-9 February 2002. This majestic natural area was the site of the first conference of this series (hosted since 1996 in Heidelberg) to be held outside of Germany. Dark Matter has become one of the most exciting and central fields of astrophysics, particle physics and cosmology. The conference covered, as usual for this series, a large range of topics, theoretical and experimental. Topics included Astronomical Evidence for

Dark Matter, the Cosmic Microwave Background, Supersymmetry, Inflation and Dark Energy, Structure Formation, Hot and Cold Dark Matter, and Ultrahigh Energy Cosmic Rays all of which were represented by experts in the field. It was very nice to see again many of our 'old' friends in Dark Matter here in South Africa. The organizers were very glad to see, in addition to world experts, the new generation here. Many young participants gave very nice professional talks during the conference. We are grateful to John Ellis for doing an incredible job preparing his excellent summary talk during the sessions. Some special interest and intensive discussions were naturally raised by the first announcement of terrestrial evidence for hot dark matter, obtained from neutrino less double beta decay. This now adds to the evidence for cold dark matter which we have from DAM A for several years already, and which remained unchallenged up to now by other experiments.

Death, Dominance, and State-Building Roger D. Petersen, 2024-02-02 The definitive work on the course, conduct, and aftermath of the Iraq war. In *Death, Dominance, and State-Building*, the eminent scholar of conflict Roger D. Petersen provides the first comprehensive analytic history of post-invasion Iraq. Although the war is almost universally derided as one of the biggest foreign policy blunders of the post-Cold War era, Petersen argues that the course and conduct of the conflict is poorly understood. He begins by outlining an accessible framework for analyzing complex, fluid, and violent internal conflicts. He then applies that framework to a variety of diverse case studies to break down the strategic interplay among the US military forces and Shia and Sunni insurgent organizations as it played out in Baghdad, Anbar, and Hawija. Highlighting the struggle for dominance between Shia and Sunni in Baghdad, Petersen offers a reconsideration of the Surge. He

also addresses failures of state-building in Iraqi Kurdistan. Critically, he shows how the legacy of the US occupation and presence from 2003-2011 shaped Iraq's political and security contours from 2011-2023. Comprehensive, analytically sophisticated, and subtle, this book draws lessons relevant to future American military interventions from what most regard as the US's most disastrous foreign policy adventure since Vietnam. The US cannot simply wish away insurgencies, which are always going to occur. The question is what the US and other great powers might do about them in the future.

Mobilities Margaret Grieco, John Urry, 2011 This book brings together the leading authors currently working at the intersection of social sciences and transport science and offers rich consideration of the issues, practices and structures of multiple mobilities. It seeks to not only draw attention to many new areas of research and investigation relating to mobile lives, but also to point to new theories and methods by which such lives have to be researched and examined, theories and methods which contributors here are themselves developing and enhancing.

Stream Ciphers in Modern Real-time IT Systems

Alexandr Alexandrovich Kuznetsov, Oleksandr Volodymyrovych Potii, Nikolay Alexandrovich Poluyanenko, Yurii Ivanovich Gorbenko, Natalia Kryvinska, 2021-11-19 This book provides the most complete description, analysis, and comparative studies of modern standardized and most common stream symmetric encryption algorithms, as well as stream modes of symmetric block ciphers. Stream ciphers provide an encryption in almost real-time regardless of the volume and stream bit depth of converted data, which makes them the most popular in modern real-time IT systems. In particular, we analyze the criteria and performance indicators of algorithms, as well as the principles and methods of designing stream ciphers. Nonlinear-feedback shift registers, which are one of the main elements of stream ciphers, have been studied in detail. The book is especially useful for scientists, developers, and experts in the field of cryptology and electronic trust services, as well as for the training of graduate students, masters, and bachelors in the field of information security.

The First 20 Hours Josh Kaufman,2013-06-13 Forget the 10,000 hour rule— what if it's possible to learn the basics of any new skill in 20 hours or less? Take a moment to

consider how many things you want to learn to do. What's on your list? What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes 10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In *The First 20 Hours*, Josh Kaufman offers a systematic approach to rapid skill acquisition— how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much

easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing during practice makes it much easier to improve. Whether you want to paint a portrait, launch a start-up, fly an airplane, or juggle flaming chainsaws, The First 20 Hours will help you pick up the basics of any skill in record time . . . and have more fun along the way.
