Music 4.1 Bobby Owsinski,2016-04-01 (Music Pro Guide Books & DVDs). Today's music industry is constantly changing at a dizzying pace, and this Music 4.1: A Survival Guide for Making Music in the Internet Age is fully equipped to help you navigate it. Written for artists overwhelmed by the seemingly endless options of the quickly evolving Internet, this is the only book that offers a comprehensive strategy for online success. In Music 4.1 , Bobby Owsinski includes an in-depth look at the economics of streaming music, with the real information about royalties that distributors and record labels don't want you to know and that simply can't be found anywhere else. The book also looks at how revenue is generated from YouTube and other video streaming services, and it provides techniques for optimizing both videos and channels for maximum success. Also included are lists of effective tips (both high- and low-tech) and checklists with every chapter, as well as a reference list of online tools for inexpensive music and merchandise distribution, sales, marketing, and promotion. With fresh interviews from several of today's successful music industry innovators, Music 4.1 reveals new and proven pathways to success in the new paradigm of the modern music world.

Direct Licensing and the Music Industry Ivan L Pitt,2015-10-13 This book discusses the economics of the music industry in the context of the changing landscape brought about by innovation, technological change, and rapid digitization. The ability of digital technology to reduce the transaction costs of music copyright licensing has all but destroyed the traditional media business models of incumbent Performance Rights Organizations (PROs), music publishers, record labels, and radio and television stations. In a climate where streaming services are rapidly proliferating and consumers prefer subscription models over direct ownership, new business models, such as direct licensing, are developing. This book provides an overview of the economics of the traditional music industry, the technology-induced changes in business models and copyright law, and the role of publishers, copyright holders and songwriters in the emerging direct licensing model. In Part One, the author examines the economic aspects of direct licensing as an alternative to the traditional blanket license for copyrighted musical compositions, with an emphasis on the often monopolistic nature of PROs. In Part Two, the author focuses on the music publisher and the role direct licensing and competition may play in the changing business models in the music industry and the potential benefits this may bring to copyright holders, such as songwriters. To compliment this model, the author proposes a maximum statutory fixed-rate for musical performances to further streamline the royalty process, especially where distributors such as Google and YouTube are concerned. This book adds to the growing body of literature on the economics of music licensing in the digital age. It will be useful to those in the fields of economics and law, as well as music executives, musicians, songwriters, composers, and other industry professionals who are interested in understanding how technology, innovation and competition have reshaped the music industry.

Copyright in the Digital Era National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,Committee on the Impact of Copyright Policy on Innovation in the Digital Era,2013-05-30 Over the course of several decades, copyright protection has been expanded and extended through legislative changes occasioned by national and international developments. The content and technology industries affected by copyright and its exceptions, and in some cases balancing the two, have become increasingly important as sources of economic growth, relatively high-paying jobs, and exports. Since the expansion of digital

technology in the mid-1990s, they have undergone a technological revolution that has disrupted long-established modes of creating, distributing, and using works ranging from literature and news to film and music to scientific publications and computer software. In the United States and internationally, these disruptive changes have given rise to a strident debate over copyright's proper scope and terms and means of its enforcement—a debate between those who believe the digital revolution is progressively undermining the copyright protection essential to encourage the funding, creation, and distribution of new works and those who believe that enhancements to copyright are inhibiting technological innovation and free expression. Copyright in the Digital Era: Building Evidence for Policy examines a range of questions regarding copyright policy by using a variety of methods, such as case studies, international and sectoral comparisons, and experiments and surveys. This report is especially critical in light of digital age developments that may, for example, change the incentive calculus for various actors in the copyright system, impact the costs of voluntary copyright transactions, pose new enforcement challenges, and change the optimal balance between copyright protection and exceptions.

All Made of Tunes James Peter Burkholder, 1995-01-01 Charles Ives is famous for using borrowed material in his music. Almost two hundred individual works or movements, spanning his entire career and representing more than a third of his output, incorporate music by other composers or from his own previous work. In this book, the eminent Ives scholar J. Peter Burkholder identifies the different kinds of quotations in Ives's music, explores the complex musical, aesthetic, and psychological motivations behind the borrowings, and shows the purpose, techniques, and effects that characterize each one. Burkholder catalogues fourteen distinct ways that Ives borrowed, ranging from direct quotation to paraphrase, variation, collage, modeling, and stylistic allusion. Arguing that these borrowing procedures were compositional strategies, he provides a new perspective on Ives's process of composition. In addition, by tracing the development of Ives's borrowing practices through his career, he contributes to an understanding of the composer's stylistic evolution. And by showing how much of Ives's music uses borrowing procedures that are common to many composers, he reveals that Ives is not as far removed from the classic-romantic tradition as has been thought. Finally, Burkholder's comprehensive treatment of Ives's borrowing techniques offers a new perspective on the entire field of musical borrowing.

Signal Processing and Machine Learning for Biomedical Big Data Ervin Sejdic, Tiago H. Falk, 2018-07-04 Within the healthcare domain, big data is defined as any ``high volume, high diversity biological, clinical, environmental, and lifestyle information collected from single individuals to large cohorts, in relation to their health and wellness status, at one or several time points.'' Such data is crucial because within it lies vast amounts of invaluable information that could potentially change a patient's life, opening doors to alternate therapies, drugs, and diagnostic tools. Signal Processing and Machine Learning for Biomedical Big Data thus discusses modalities; the numerous ways in which this data is captured via sensors; and various sample rates and dimensionalities. Capturing, analyzing, storing, and visualizing such massive data has required new shifts in signal processing paradigms and new ways of combining signal processing with machine learning tools. This book covers several of these aspects in two ways: firstly, through theoretical signal processing chapters where tools aimed at big data (be it biomedical or otherwise) are described; and, secondly, through application-driven chapters focusing on existing applications of signal processing and machine learning for big biomedical data. This text aimed at the curious researcher working in the field, as well as undergraduate and graduate students eager to learn how signal processing can help with big data analysis. It is the hope of Drs. Sejdic and Falk that this book will bring together signal processing and machine learning researchers to unlock existing bottlenecks within the healthcare field, thereby improving patient quality-of-life. Provides an overview of recent state-of-the-art signal processing and machine learning algorithms for biomedical big data, including applications in the neuroimaging, cardiac, retinal, genomic, sleep, patient outcome prediction, critical care, and rehabilitation domains. Provides contributed chapters from world leaders in the fields of big data and signal processing, covering topics such as data quality, data compression, statistical and graph signal processing techniques, and deep learning and their applications within the biomedical sphere. This book's material covers how expert domain knowledge can be used to advance signal processing and machine learning for biomedical big data applications.
