Unmanned Systems of World Wars I and II H. R. Everett, 2015-11-13 The first comprehensive technical history of air, land, sea, and underwater unmanned systems, by a distinguished U.S. Navy roboticist. Military drones have recently been hailed as a revolutionary new technology that will forever change the conduct of war. And yet the United States and other countries have been deploying such unmanned military systems for more than a century. Written by a renowned authority in the field, this book documents the forgotten legacy of these pioneering efforts, offering the first comprehensive historical and technical accounting of unmanned air, land, sea, and underwater systems. Focusing on examples introduced during the two world wars, H. R. Everett meticulously traces their development from the mid-nineteenth century to the early Cold War. A pioneering Navy roboticist, Everett not only describes these systems in detail but also reverse-engineers the designs in order to explain how they operated in real-world conditions of the time. More than 500 illustrations—photographs, drawings, and plans, many of them never before published—accompany the text. Everett covers the evolution of early wire-guided submersibles, tracing the development of power, propulsion, communication, and control; radio-controlled surface craft, deployed by both Germany and Great Britain in World War I; radio-controlled submersibles; radio-controlled aircraft, including the TDR-1 assault drone project in World War II—which laid the groundwork for subsequent highly classified drone programs; and remote-controlled ground vehicles, including the Wehrmacht's Goliath and Borgward demolition carriers.

Alien Interview Lawrence R. Spencer, 2008-01-01 The content of this book is the letter, Top Secret interview transcripts and personal notes received from the late Matilda O'Donnell MacElroy, an Army Air Force nurse who stationed at the Roswell Army Air Field 509th Bomb Group. Her letter asserts that this material is based on a series of interviews she conducted with an extraterrestrial being as part of her official duty as a nurse in the U.S. Army Air Force. During July and August she interviewed a saucer pilot who crashed near Roswell, New Mexico on July 8th, 1947. The being identified itself as an officer, pilot and engineer of The Domain Expeditionary Force, a race of beings who are using the asteroid belt in our solar system as a intergalactic base of operations.

Spectacular Flops Michael Brian Schiffer,2018-12-31 Many technologies begin life as someone's vision of an ambitious, perhaps audacious, technology that is expected to have a revolutionary impact on consumers-whether families, companies, or societies. However, if this highly touted technology fails prematurely at some point in its life history, it becomes a spectacular flop. Employing a behavioral perspective, this book presents a sample of twelve spectacular flops encompassing the past three centuries-ranging from the world's first automobile to the nuclear-powered bomber. Because technologies may fail from many different causes, spectacular flops pose a special challenge to the author's long-term project of furnishing generalizations about technological change. Instead of constructing generalizations that apply to all spectacular flops, this book provides limited generalizations that pertain to particular groups of technologies bounded by parameters such as long-term development projects and one-off projects. The reader need have no prior familiarity with the technologies because basic principles are introduced as needed.

Radio Alasdair Pinkerton,2019-06-15 Radio is a medium of seemingly endless contradictions. Now in its third century of existence, the technology still seems startlingly modern; despite frequent predictions of its demise, radio continues to evolve and flourish in the age of the internet and social media. This book explores the history of the radio, describing its technological, political, and social evolution, and how it emerged from Victorian

experimental laboratories to become a near-ubiquitous presence in our lives. Alasdair Pinkerton's story is shaped by radio's multiple characters and characteristics—radio waves occur in nature, for instance, but have also been harnessed and molded by human beings to bridge oceans and reconfigure our experience of space and time. Published in association with the Science Museum, London, Radio is an informative and thought-provoking book for all enthusiasts of an old technology that still has the capacity to enthuse, entertain, entice, and enrage today.

The Way Toys Work explains the technology, history, and trivia behind 50 popular toys, with patent blueprints and photos of the &“guts&” of devices including: * Kaleidoscope * Magna Doodle * Slinky * Nintendo * Super Soaker * Big Mouth Billy Bass * Rubik's Cube * Silly Putty * Video Game Light Gun * Furby * Dunking Bird * View-Master * Yo-Yo * Push 'n' Go Car * Wiffle Ball * Gyroscope * Operation * Hula Hoop You'll also find pointers on how to build your own versions using recycled materials and a little ingenuity, experiments that can be done with certain toys, and tips on reverse engineering old toys to get a better look at their interior mechanics. The only thing you won't learn is how the Magic 8 Ball is able to predict the future--some things are best left a mystery.
