Energy Savers Barry Leonard, 2007-10 A large portion of the energy for which the typical U.S. family pays is wasted, such as through poorly insulated windows & doors. By using a few inexpensive energy-efficient measures, you can reduce your energy bills by 10% to 50%, & at the same time, help reduce air pollution. The key is a whole-house energy efficiency plan. View your home as an energy system with interdependent parts. You may have a top-of-the-line, energy-efficient furnace, but if the ducts leak & are un-insulated, & your walls, attic, windows, & doors are un-insulated, your energy bills will remain high. Covers: insulation & weatherization; heating & cooling; water heating; windows; landscaping; lighting; appliances. Illustrations.

EXCERPT FROM THE BOOK Neglecting to Maintain a Pool or Hot Tub within Your Home Another sure fire way to lose money on electricity is to neglect your pool or hot tub. If you own a heated pool, the best way to save energy is to invest in a solar cover. You can lower the heating element on your pool, allowing the solar cover to maintain the heat, and you will save money on pool heating costs. The solar cover has the potential for drawing free heat from the sun to heat the pool, and it also prevents evaporation of the water. Clean pool filters on a daily basis. Keep the cover on your hot tub when not in use as well. Maintain a comfortable water temperature, usually under 80 degrees. By doing so, you will save more money on heating costs of the pool. This is also another good example of where the solar cover can come in good use. Keep the filters of the pool clean on a daily basis. Not doing so can clog the pool with unwanted debris and cause it to work harder and drawing on more electricity. Buy a copy to keep reading!
