Ringtailed Lemur Biology Alison Jolly, Robert W. Sussman, Naoki Koyama, Hanta Rasamimanana, 2006-11-30 This volume includes up-to-date field research on the longest-studied and best known of lemur species. It contains articles by scientists from America, Europe, Japan and Madagascar, who combine their knowledge to describe an animal which is unique among primates. The papers review past research and add new dimensions of research related to nutrition, health, hormonal biology, plant ecology, behavioral ecology, and demography of Lemur catta.

Ring-tailed Lemurs Michelle L. Sauther, F. Cuzzo, K. A. I. Nekaris, A. Nekaris, L. Gould, M. T. O'Mara, 2015 For over 50 years, primatologists have conducted studies in the wild on Madagascar's ring-tailed Lemur catta, one of the best-known primate species. These varied studies have covered topics ranging from behaviour to biology, ecology, genetics and palaeobiology. This Folia Primatologica special topic issue takes that research a step further by not only adding to our knowledge of L. catta in long-term dry forest study sites such as Bezà Mahafaly or Berenty, but by also discussing populations residing at high altitude and in different forest types, namely limestone spiny, rocky-outcrop rupicolous or anthropogenically disturbed coastal habitats. The contributors comprise not only long-established experts in this field, but also a new generation of scientists dedicated to furthering our understanding of this important primate species. In addition to exploring behavioural ecological aspects in detail, this issue also offers an update on ring-tailed lemur life history, morphology, genetics and cognition.

Lemur Social Systems and Their Ecological Basis J. Ganzhorn, P.M. Kappeler, 2013-06-29 The past decade has seen a steady increase in studies of lemur behavior and ecology. As a result, there is much novel information on newly studied populations, and even newly discovered species, that has not yet been published or summarized. In fact, lemurs have not been the focus of an international symposium since the Prosimian Biology Conference in London in 1972. Moreover, research on lemurs has reached a new quality by addressing general issues in behavioral ecology and evolutionary biology. Although lemurs provide important comparative information on these topics, this aspect of research on lemurs has not been reviewed and compared with similar studies in other primate radiations. Thus, as did many in the field, we felt that the time was ripe to review and synthesize our knowledge of lemur behavioral

ecology. Following an initiative by Gerry Doyle, we organized a symposium at the XIVth Congress of the International Primatological Society in Strasbourg, France, where 15 contributions summarized much new information on lemur social systems and their ecological basis. This volume provides a collection of the papers presented at the Strasbourg symposium (plus two reports from recently completed field projects). Each chapter was peer-reviewed, typically by one lemurologist and one other biologist. The first three chapters present novel information from the first long-term field studies of three enigmatic species. Sterling describes the social organization of *Daubentonia madagascariensis*, showing that aye-aye ranging patterns deviate from those of all other nocturnal primates.
