Are Your Meds Making You Sick? Robert S. Gold,2011-12 Dangerous drug interactions and common drug-induced illnesses are a hidden epidemic in the USA--possibly throughout the world--where unqualified use and abuse of prescription drugs is becoming commonplace and many doctors prescribe multiple meds because they don't have the time to fully diagnose. In the United States alone known adverse drug interactions cause death, injury or hospitalization to more than 2 million people yearly, and this could be the tip of the iceberg as millions of cases go undetected or unreported. Robert S. Gold, RPh, MBA, a clinical hospital pharmacist and affiliate instructor of clinical pharmacy at Purdue University with over 27 years of experience, shows the reader how to think like a clinical hospital pharmacist. He lists his 16 Rules of Safe Medication Use that, if followed, can help prevent the common problems that medications can cause; gives

specific examples and scenarios featuring the thirty-six drugs that are the most common offenders; and explains how even seemingly good drugs can harm a patient's kidney, liver, brain and heart if the patient's medical history and physical vulnerabilities are not taken into account. *Are Your Meds Making You Sick? A Pharmacist's Guide to Avoiding Dangerous Drug Interactions, Reactions and Side-Effects* is highly accessible and formatted for quick reference by any layperson. As the U.S. population ages and there is a steady increase in the number of prescribed and OTC medications and alternative remedies, this book will only become more important. When pharmacist Robert Gold's father began suffering side effects from medication, his expertise in the field was a quick resource. As a pharmacist for over 27 years, however, he realized most people don't have the experience and knowledge to identify adverse drug reactions or common drug-induced illness. *Are Your Meds Making You Sick? A Pharmacist's Guide to Avoiding Dangerous Drug Interactions, Reactions and Side-Effects* is a highly accessible tool formatted for quick reference that any layperson can use to protect themselves and their loved ones against adverse drug interactions, reactions, and harmful-even lethal-side-effects. As the U.S. population ages, there is a steady increase in the number of prescribed and OTC medications. Already, each year over 2 million Americans visit their health-care providers due to the adverse side effects of medication, and 700,000 make trips to the emergency room. The number of deaths resulting from adverse drug reactions and interactions has doubled in the last 25 years. Gold starts with Sixteen Rules for Safe Medication Use--this alone is worth the price of admission--explaining that these simple rules can not only protect us against dangerous medications or drug combinations, but also help us to optimize medications' therapeutic effect. From his vantage as a pharmacist practicing for over 25 years, the author has seen most if not all of the unintended consequences of drug prescription and combining. Gold uses a forensic or detective format to walk the consumer through case histories of dangerous drug interactions in which he explains to the reader what went wrong and what dangerous drug interaction or adverse effect was involved. This device immediately engages readers and, by encouraging them to look with him for a solution to the problem presented, gives them a quick, practical understanding of the subject. No other book on the market offers the scope and clarity of *Are Your Meds Making You Sick? A Pharmacist's Guide to Avoiding Dangerous Drug Interactions, Reactions and Side-Effects*. By learning to think like a clinical hospital pharmacist we become aware of the common signs and symptoms of drug-induced illness and how to avoid it. Gold also covers some of the common nondrug medications--herbs, supplements, diet pills--that have potentially dangerous interactions with common prescription and OTC drugs. Also explained in this life-saving book is how seemingly good drugs can harm a patient's kidney, liver, brain and heart and thus the importance of matching meds to personal physiology, medical history and risk profile. Some of the medication-induced illnesses addressed in *Are Your Meds Making You Sick? A Pharmacist's Guide to Avoiding Dangerous Drug Interactions, Reactions and Side-Effects* are: Pneumonia, respiratory insufficiency, renal failure, bleeding, toxicity, pancreatitis, hypoglycemia, hearing loss, liver failure, seizure, coughing, intestinal blockage, heart problems, diabetic complications, diarrhea, hyperkalemia, movement disorders, opiate withdrawal, rhabdomyolysis, Stevens Johnson Syndrome, falling, hallucinating, and psychosis, among many others. *Are Your Meds Making You Sick? A Pharmacist's Guide to Avoiding Dangerous Drug Interactions, Reactions and Side-Effects* is highly accessible and formatted for quick reference by any layperson. As the U.S. population ages and there is a steady increase in the number of prescribed and OTC medications and alternative remedies, this book will only become more important.

More Human Steve Hilton, Scott Bade, Jason Bade, 2016-04-26 People feel angry and let down by their leaders, as well as by the institutions that dominate their lives: political parties, government bureaucracy, and corporations. Yet the cause of this malaise, according to political -- advisor -- turned -- tech -- CEO Steve Hilton, is not being addressed by politicians on the left or the right. Hilton argues that much of our daily experience -- from the food we eat, to the governments we elect, to the economy on which our wealth depends, to the way we care for our health and well -- being -- has become too big, too bureaucratic, and too distant from the human scale. *More Human* sets out a radical manifesto for change, aimed at the root causes of our problems rather than just the symptoms. Whether it's using the latest advances in neuroscience to inform the fight against poverty and inequality, or applying lessons from America's most radical schools to transform our children's education, this book is an agenda for rethinking and redesigning the outdated systems and structures of our politics, government, economy, and society to make them more suited to the way we want to live our lives today. To make them more human.

Information Technology for Patient Empowerment in Healthcare Maria Adela Grando, Ronen Rozenblum, David Bates, 2015-03-30 Aims and Scope Patients are more empowered to shape their own health care today than ever before. Health information technologies are creating new opportunities for patients and families to participate actively in their care, manage their medical problems and improve communication with their healthcare providers. Moreover, health information technologies are enabling healthcare providers to partner with their patients in a bold effort to optimize quality of care, improve health outcomes and transform the healthcare system on the macro-level. In this book, leading figures discuss the existing needs, challenges and opportunities for improving patient engagement and empowerment through health information technology, mapping out what has been accomplished and what work remains to truly transform the care we deliver and engage patients in their care. Policymakers, healthcare providers and administrators, consultants and industry managers, researchers and students and, not least, patients and their family members should all find value in this book. In the exciting period that lies just ahead, more will be needed than simply connecting patients to clinicians, and clinicians to each other. The health care systems that will be most effective in meeting patients' needs will be those that can actually design their 'human wares' around that purpose. This book provides deep insight into how information technology can and will support that redesign. Thomas H. Lee, MD, MSc, Chief Medical Officer, Press Ganey Associates; Professor of Medicine, Harvard Medical School and Professor of Health Policy and Management, Harvard School of Public Health The Editors: Drs. Maria Adela Grando, Ronen Rozenblum and David W. Bates are widely recognized professors, researchers and experts in the domain of health information technology, patient engagement and empowerment. Their research, lectures and contributions in these domains have been recognized nationally and internationally. Dr. Grando is affiliated with Arizona State University and the Mayo Clinic, and Drs. Rozenblum and Bates are affiliated with Brigham and Women's Hospital and Harvard University.

Vitamin and Mineral Requirements in Human Nutrition World Health Organization, FAO, 2004 In the past 20 years micronutrients have assumed great public

health importance and a considerable amount of research has led to increasing knowledge of their physiological role. Because it is a rapidly developing field, the WHO and FAO convened an Expert Consultation to evaluate the current state of knowledge. It had three main tasks: to review the full scope of vitamin and minerals requirements; to draft and adopt a report which would provide recommended nutrient intakes for vitamins A, C, D, E, and K; the B vitamins; calcium; iron; magnesium; zinc; selenium; and iodine; to identify key issues for future research and make preliminary recommendations for the handbook. This report contains the outcome of the Consultation, combined with up-to-date evidence that has since become available.

Adolescent Health Services Institute of Medicine, National Research Council, Board on Children, Youth, and Families, Committee on Adolescent Health Care Services and Models of Care for Treatment, Prevention, and Healthy Development, 2009-01-03 Adolescence is a time of major transition, however, health care services in the United States today are not designed to help young people develop healthy routines, behaviors, and relationships that they can carry into their adult lives. While most adolescents at this stage of life are thriving, many of them have difficulty gaining access to necessary services; others engage in risky behaviors that can jeopardize their health during these formative years and also contribute to poor health outcomes in adulthood. Missed opportunities for disease prevention and health promotion are two major problematic features of our nation's health services system for adolescents. Recognizing that health care providers play an important role in fostering healthy behaviors among adolescents, *Adolescent Health Services* examines the health status of adolescents and reviews the separate and uncoordinated programs and services delivered in multiple public and private health care settings. The book provides guidance to administrators in public and private health care agencies, health care workers, guidance counselors, parents, school administrators, and policy makers on investing in, strengthening, and improving an integrated health system for adolescents.

Global Issues in Water, Sanitation, and Health Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2009-10-25 As the human population grows—tripling in the past century while, simultaneously, quadrupling its demand for water—Earth's finite freshwater supplies are increasingly strained, and also increasingly contaminated by domestic, agricultural, and industrial wastes. Today, approximately one-third of the world's population lives in areas with scarce water resources. Nearly one billion people currently lack access to an adequate water supply, and more than twice as many lack access to basic sanitation services. It is projected that by 2025 water scarcity will affect nearly two-thirds of all people on the planet. Recognizing that water availability, water quality, and sanitation are fundamental issues underlying infectious disease emergence and spread, the Institute of Medicine held a two-day public workshop, summarized in this volume. Through invited presentations and discussions, participants explored global and local connections between water, sanitation, and health; the spectrum of water-related disease transmission processes as they inform intervention design; lessons learned from water-related disease outbreaks; vulnerabilities in water and sanitation infrastructure in both industrialized and developing countries; and opportunities to improve water and sanitation infrastructure so as to reduce the risk of water-related infectious disease.
