Displacing Desire Beth E. Notar,2006-10-31 Why do millions of people from around the world flock to Dali, a small borderland town in the Himalayan foothills of southwest China? Lonely planeteers—American, European, and Israeli backpackers named for the guidebook they carry—trek halfway across the globe to get off the beaten track, yet converge here to drink coffee, eat banana pancakes, and share music from home. Coastal Chinese who are prospering in the phenomenal economic growth of China's reform era travel thousands of miles to sing songs and dress up as their favorite characters from a revolutionary-era movie musical. Overseas Chinese from Southeast Asia as well as a new generation of mainland youth follow in the footsteps of heroes and villains from Hong Kong martial arts novels, seeking an

experience of a Buddhist wild, wild, West at a martial arts theme park dubbed Hollywood East, or Daliwood. Inspired by representations in popular culture that engender fantasies of the exotic, these tourists, Western and Chinese, journey to Dali, Yunnan, in search of an imagined place where they can indulge their craving for authenticity, display their status in the present, and act out their nostalgia for the past. Based on more than a decade of ethnographic research, Beth Notar explores struggles over place as people in Dali attempt to represent their historical identity and define their future. Displacing Desire takes representation into the realm of practice to consider the ways in which those who are represented must contend with their image in popular culture and the material after-effects of representations even decades after their original production. It contributes to an exploration of travel as performance of nostalgia, fantasy, and status. More specifically it contributes to an understanding of the growth of consumer culture in China, examining what China's modernization process and market economy mean for different social actors in their struggles over power and place.

The book consists of 27 chapters presented in seven parts with the following themes: concept, scope and structure of destination marketing and management, destination planning and policy, consumer decision-making processes, destination marketing research, destination branding and positioning, destination product development and distribution, the role of

emerging technologies in destination marketing, destination stakeholder management, destination safety, disaster and crisis management, destination competitiveness and sustainability, and challenges and opportunities for destination marketing and management. -- [Source inconnue].

Knowmad Society John W. Moravec,Pieter Spinder,Bianca Stokman,Thieu Besselink,2013-06-19 Knowmads are nomadic knowledge workers –creative, imaginative, and innovative people who can work with almost anybody, anytime, and anywhere. The jobs associated with 21st century knowledge and innovation workers have become much less specific concerning task and place, but require more value-generative applications of what they know. The office as we know it is gone. Schools and other learning spaces will follow next. This book explores the future of learning, work and how we relate with each other in a world where we are now asked to design our own futures. Key topics covered include: reframing learning and human development; required skills and competencies; rethinking schooling; flattening organizations; co-creating learning; and new value creation in organizations. In this volume, nine authors from three continents, ranging from academics to business leaders, share their visions for the future of learning and work. Educational and organizational implications are uncovered, experiences are shared, and the contributors explore what it's going to take for individuals, organizations, and nations to succeed in Knowmad Society.

Engineering in K–12 Education National Research Council,National Academy of Engineering,Committee on K-12 Engineering Education,2009-09-08 Engineering education in K-12 classrooms is a small but growing phenomenon that may have implications for engineering and also for the other STEM subjects-science, technology, and

mathematics. Specifically, engineering education may improve student learning and achievement in science and mathematics, increase awareness of engineering and the work of engineers, boost youth interest in pursuing engineering as a career, and increase the technological literacy of all students. The teaching of STEM subjects in U.S. schools must be improved in order to retain U.S. competitiveness in the global economy and to develop a workforce with the knowledge and skills to address technical and technological issues. Engineering in K–12 Education reviews the scope and impact of engineering education today and makes several recommendations to address curriculum, policy, and funding issues. The book also analyzes a number of K–12 engineering curricula in depth and discusses what is known from the cognitive sciences about how children learn engineering-related concepts and skills. Engineering in K–12 Education will serve as a reference for science, technology, engineering, and math educators, policy makers, employers, and others concerned about the development of the country's technical workforce. The book will also prove useful to educational researchers, cognitive scientists, advocates for greater public understanding of engineering, and those working to boost technological and scientific literacy.

Unlikely Destinations: The Lonely Planet Story
Tony Wheeler,Maureen Wheeler,2007-05-15 Founders of the phenomenally successful publishing company Lonely Planet, Tony and Maureen Wheeler have produced travel guides to just about every corner of the globe. Lonely Planet Publications was born in 1973 when the Wheelers self-published a quirky travel guide, Across Asia on the Cheap. This was quickly followed by what soon became the backpackers' bible, South-East Asia on a Shoestring. Going boldly where no other travel publisher had ventured, they catered to a new

generation of independent, budget-conscious travelers long before the advent of mass tourism. Unlikely Destinations: The Lonely Planet Story is a unique mix of autobiography, business history and travel book. It traces Tony and Maureen Wheeler's personal story as well as the often bumpy evolution of their travel guide business into the world's largest independent travel publishing company. Not surprisingly, after thirty years in the business the Wheelers have an unrivalled set of anecdotes which they share in Unlikely Destinations: The Lonely Planet Story. They have been hassled by customs, cheated by accountants, let down by writers, banned in Malawi, berated for their Burma guide and had books pirated in Vietnam. Tony has been gored by a cow in Benares, declared dead around the world in an assortment of gruesome and greatly exaggerated accounts and their company has been accused of the Lonely Planetization of the world. Through it all, from the heady days of discovery in the '70s to the rocky patch after the September 11th terrorist attacks, the Wheelers' passion for the planet and traveling certainly hasn't diminished, and comes shining through in this enthralling travelogue. But above all, their memoir reveals the spirit of adventure that has made them, according to the New York Daily News, the specialists in guiding weird folks to weird places.

Converging Technologies for Improving Human Performance Mihail C. Roco,William Sims Bainbridge,2013-04-17 M. C. Roco and W.S. Bainbridge In the early decades of the 21st century, concentrated efforts can unify science based on the unity of nature, thereby advancing the combination of nanotechnology, biotechnology, information technology, and new technologies based in cognitive science. With proper attention to ethical issues and societal needs, converging in human abilities, societal technologies could

achieve a tremendous improvement outcomes, the nation's productivity, and the quality of life. This is a broad, cross cutting, emerging and timely opportunity of interest to individuals, society and humanity in the long term. The phrase convergent technologies refers to the synergistic combination of four major NBIC (nano-bio-info-cogno) provinces of science and technology, each of which is currently progressing at a rapid rate: (a) nanoscience and nanotechnology; (b) biotechnology and biomedicine, including genetic engineering; (c) information technology, including advanced computing and communications; (d) cognitive science, including cognitive neuroscience. Timely and Broad Opportunity. Convergence of diverse technologies is based on material unity at the nanoscale and on technology integration from that scale.

  Code 2.0 Lawrence Lessig,2009-12-30 Lawrence Lessig's Code and Other Laws of Cyberspace v1 quickly began to define a certain vocabulary for thinking about the regulation of cyberspace. More than any other social space, cyberspace would be controlled or not depending upon the architecture, or code, of that space. And that meant regulators, and those seeking to protect cyberspace from at least some forms of regulation, needed to focus not just upon the work of legislators, but also the work of technologists.Code version 2.0 updates the original work. It is not, as Lessig writes in the preface, a new work. The aim of the update was to recast the argument in the current context, and to clarify the argument where necessary. While Lessig himself has strong views about preserving important liberties that cyberspace originally protected, this book does not push any particular set of values. Unlike Lessig's other books, The Future of Ideas, and Free Culture, this book has no particular political agenda. Instead, the objective of Code is to introduce and defend a

particular way of understanding regulation, and to describe the trend that we should expect regulation in cyberspace to take.Code v2 is published under the terms of the CC Attribution-ShareAlike license. Money raised from the sale of this book supports the development of free software and documentation.

Academic Libraries for Commuter Students Mariana Regalado,Maura A. Smale,2018-11-29 Did you know that more than 85% of U.S. undergraduates commute to college? Yet the literature geared to academic libraries overwhelmingly presumes a classic, residential campus. This book redresses that imbalance by providing a research-based look at the specific academic needs of commuter students. Edited by a team of librarians and anthropologists with City University of New York, the largest urban public university in the U.S, it draws on their ongoing research examining how these students actually interact with and use the library. The insights they've gained about how

library resources and services are central to commuter students' academic work offer valuable lessons for other institutions. Presenting several additional case studies from a range of institution types and sizes, in both urban and suburban settings, this book provides rigorous analysis alongside descriptions of subsequent changes in services, resources, and facilities. Topics include why IUPUI interior designers decided to scrap plans to remove public workstations to make way for collaborative space;how ongoing studies by University of North Carolina anthropologist Donna Lanclos shaped the design of the Family Friendly Library Room, where students may bring their children;ways that free scanners and tablet lending at Brooklyn College supports subway studiers;ideas from students on how best to help them through the use of textbook collections;using ACRL's Assessment in Action model to learn about student engagement and outcomes with library instruction at a community college; andguidance on enlisting the help of anthropology students to conduct interviews and observations in an ethnographic study. With its emphasis on qualitative research, this book will help readers learn what commuter students really need from academic libraries.
