A Souvenir From Elanthia Dominic Miles, 2020-08-19 The Hub was where all the knowledge of the Inner Planets was stored and Robyn had spent half her life inputting information into its electronic data banks. The Hub was infallible, everyone knew that. It never made mistakes and always told the truth. Or, at least, that's what Robyn believed. Until the day she was asked to look into the history of Elanthia. An inconsequential, scruffy little planet, she was told, of no real consequence. But if that was true, why had the official version of the planet's history been falsified, why had the true facts been suppressed? The real story, when Robyn eventually uncovered it, was so dangerous that she had to escape Hanis and flee to Elanthia, where she started to discover the truth about the planet's recent past.

**Information Theory** Imre Csiszár, János Körner, 2011-06-30 Csiszár and Körner's book is widely regarded as a classic in the field of information theory, providing deep insights and expert treatment of the key theoretical issues. It includes in-depth coverage of the mathematics of reliable information transmission, both in two-terminal and multi-terminal network scenarios. Updated and considerably expanded, this new edition presents unique discussions of information theoretic secrecy and of zero-error information theory, including the deep connections of the latter with extremal combinatorics. The presentations of all core subjects are self contained, even the advanced topics, which helps readers to understand the important connections between seemingly different problems. Finally, 320 end-of-chapter problems, together with helpful hints for solving them, allow readers to develop a full command of the mathematical techniques. It is an ideal resource for graduate students and researchers in electrical and electronic engineering, computer science and applied mathematics.

Code examples in Python give readers a hands-on blueprint for understanding and implementing their own machine translation systems. The book also provides extensive coverage of machine learning tricks, issues involved in handling various forms of data, model enhancements, and current challenges and methods for analysis and visualization. *A Softman* Roman S!delnik & Mara Brewer,2015-01-21 2070. Only some decades ago the human brain used a small portion of its potentialities at the most. But now, thanks to the "Intellectum", a bio-chip developed by the "Bio-Soft" corporation, people have learned to use the potentialities of the human brain and body to full extent. But it all happens to be not so easy and safe... In the united government of the planet Earth there will always be people vested with power who abuse it for mercenary ends. And the program of the forced bio-chip implantation of the population not only increases the possibilities to exercise the total control over each of us, but also allows to reprogram any person's mind or even to nullify your intellectum as far as the fatal outcome. Alto Marini, a senior guard of the cyberjail built for custody and virtual tortures of the violators of the political regime, has already been for eight years solving the mystery of disappearance of his elder brother, the creator of the "Intellectum". But as soon as Alto seems to approach the answer, the life and the social status of Alto himself change drastically...
