Marine Navigation 1 : Piloting Richard R.

Hobbs,2012-12-06 Throughout the history of warfare at sea, navigation has been an important basic determinant of victory. Occasionally, new members of the fraternity of the sea will look upon navigation as a chore to be tolerated only as long as it takes to find someone else to assume the responsibility. In my experience, such individuals never make good naval officers. Commander Hobbs has succeeded in bringing together the information and practical skills required for that individual who would take the first step down the road toward becoming a competent marine navigator. At the outset of this book, the author stresses the necessity for safe navigation, but there is another basic tenet of sea warfare that this book serves. The best weapons system man has ever devised cannot function effectively unless it knows where it is in relation to the real world, where it is in relation to the enemy, and where the enemy is in relation to the real world. Not all defeats can be attributed to this lack of

information, but no victories have been won by those who did not know where they were.

Günter Schilder, 1984

Sailing Across the World's Oceans Günter Schilder, Hans Kok, 2019 After covering the Dutch VOC manuscript charts on vellum in *Sailing for the East* (ESHC 10, 2010), the printed charts on vellum by commercial Amsterdam chart-publishers cried out for scrutiny as well. *Sailing Across the World's Oceans* discusses these rare remaining charts, of which some 150 copies could be traced, mostly kept in international institutions. Their titles run from Europe to Indian Ocean and Atlantic Ocean, the latter commonly called West-Indische Paskaerten. The charts are described and analysed in an illustrated cartobibliography. The extensive introduction investigates the development of Amsterdam as a recognized centre for map production and distribution in Europe. It also discusses navigation techniques used in the sixteenth and seventeenth centuries. The developing world image is considered, as it may be derived from Dutch contributions. This book delivers insight into chart-making history that has not been available before.

The Sea Chart Derek Howse, Michael W. B. Sanderson, National Maritime Museum (Great Britain), 1973 This is a history of marine cartography and nautical charts, based on the collection of the National Maritime Museum of Greenwich. It includes sixty illustrated plates from 1420 to 1971; most are pre-1800 and with accompanying essays.
