Sulphuric Utopias Lukas Engelmann,Christos Lynteris,2020-03-31 How early twentieth century fumigation technologies transformed maritime quarantine practices and inspired utopian visions of disease-free global trade. In the late nineteenth and early twentieth centuries, fumigation technologies transformed global practices of maritime quarantine through chemical and engineering innovation. One of these technologies, the widely used Clayton machine, blasted sulphuric acid gas through a docked ship in an effort to eliminate pathogens, insects, and rats while leaving the cargo and the structure of the vessel unharmed, shortening its time in quarantine and minimizing the risk of importing infectious diseases. In *Sulphuric Utopias*, Lukas Engelmann and Christos Lynteris examine this overlooked but historically crucial practice at the intersection of epidemiology, hygiene, applied chemistry, and engineering. They show how maritime fumigation inspired utopian visions of disease-free trade to improve global shipping and to encourage universally applicable standards of sanitation and hygiene. Engelmann and Lynteris chart the history of ideas about fumigation, disinfection, and quarantine, and chronicle the development of the Clayton machine in 1880s New Orleans. Built by the Louisiana Board of Health and adapted and patented by Thomas Clayton, the machine offered a barrier against bacteria and pests and enabled a highway to global trade. Engelmann and Lynteris chronicle the Clayton machine's success and examine its competitors, including carbon-based fumigation methods in Germany and the Ottoman Empire as well as the “Sulfurozador” in Argentina. They follow the international standardization of maritime fumigation and explore the Clayton machine's decline after World War I, when visions of “sulphuric utopia” were replaced by a pragmatic acknowledgment of epidemiological complexity.

*Britain's Maritime Empire* John McAleer,2017 Analyses the critical role played by the maritime gateway to Asia around the Cape of Good Hope in

the development of the British Empire. Focusing on a region that connected the Atlantic and Indian oceans at the centre of a vital maritime chain linking Europe with Asia, the book re-examines and reappraises Britain's oceanic empire.

**London Gateway** Niall Callan, Graham Scott, Toby Gane, Stephanie Arnott, 2012 The DP World London Gateway Port, on the north bank of the Thames, is a major development of a new container terminal. Its construction has been accompanied by a major dredging scheme that has increased the depth of sections of the approach channel over a length of c. 100km, from the outer reaches of the Thames to the new terminal. From its beginning, this scheme included careful consideration of the archaeological consequences of dredging in such a historically-important estuary. Over the course of a decade, investigations by Wessex Archaeology have provided a new perspective on the historic environment of the Thames, and explored innovative archaeological approaches and methodologies for addressing marine developments of this type and scale. This volume sets out the challenges, results and history of these investigations, and the context and constraints encountered. The results contribute to our knowledge of maritime archaeology in the Thames Estuary and to the wider practice of marine development-led archaeology. A companion volume on the terrestrial investigations conducted by Oxford Archaeology is presented in *London Gateway: Iron Age and Roman Salt Making in the Thames Estuary*. Excavations at Stanford Wharf Nature Reserve, Essex.

*Maritime History as Global History* Maria Fusaro, Amélia Polónia, 2010 This study aims to provide new insights into the connections between maritime history and global history. It demonstrates the significance of maritime activity as a conduit of global exchange by examining local, national, and international interdependencies and trade networks, and a broad range of time periods, geographical areas, and various sub-divisions of maritime historical research. It is composed of ten essays, with an introductory chapter and concluding chapter. The first five essays discuss the effects of globalisation on shipping in the early modern period; the following three discuss maritime transportation and the economics of industrialisation from the nineteenth century to the present day; the next discusses the impact of global entrepreneurialism on maritime history; the penultimate discusses the connections and variables between maritime and global history; and the concluding chapter examines the theoretical assumptions surrounding the two disciplines, using the globalisation of Early Modern Spain as a case study to do so. The study demonstrates that the core strength of maritime history is

its essential place in global history, and that the process of globalisation began at sea.

*Integrating Seaports and Trade Corridors* Robert J. McCalla, Brian Slack, 2016-05-23 Seaport gateways and the corridors which connect them to widely dispersed hinterlands are of vital and essential importance to international trade and the world economy. Distributing goods to ultimate land destinations or bringing the goods to seaports from inland origins is organizationally complex involving multiple actors. This book furthers understanding about how this movement is organized, the role of ports acting as gateways and the actions of corridor players. A key question that confronts the shipping and port industries, as well as public authorities, is how to increase the benefits of maritime trade to the companies and institutions directly involved as well as the port city-regions where the transfers take place? This question is being posed in the midst of a global economic recession and trade downturn, and in the context of contemporary policy frameworks whose goals are to generate economic benefits and efficiencies rather than to maximize traffic volumes. This book puts into perspective the reality, opportunities and challenges facing seaport gateways and corridors now and in the future.

*Prosperous Nation Building Through Shipbuilding*, 2013-03-15 This book elucidates the potential of the shipbuilding industry for initiating economic

development, which eventually leads to enhancing the prosperity of a nation. This is explained by intrinsically linking the macroeconomics of the nation with the microeconomics of the shipbuilding industry. The economic and commercial spin offs by the shipyard to the various industries have been analysed and calculated. An attempt has been made to trace the illustrious past of Indian shipbuilding from the Bronze Age, through the ancient kingdom period, to the present times, in the backdrop of Indian maritime history. The operational requirement of commercial as well as defence shipbuilding has been analysed to assess the available potential market space for the Indian shipbuilding industry. Lessons from history help to formulate future strategies. In pursuit of this, the book investigates the global trends in commercial shipbuilding since the industrial revolution period to date; the success stories of leading shipbuilding nations viz. UK, USA, Japan, Korea and China have been analysed. The benefits accrued by these nations through shipbuilding have been summarised. The strategies adopted by each of these countries to reach the pinnacle in shipbuilding have been examined and the salient features relevant for India have been identified. Productivity measurement in shipbuilding has been examined and the problems with the current system have been highlighted, along with solutions. This book suggests the usage of Data Envelopment Analysis (DEA), a mathematical linear programming technique, as an appropriate tool to measure total productivity as well as profitability. The various ways of improving profitability in shipbuilding, by way of cost-cutting techniques, along with some Indian case studies have been explained in the book. Keeping the 'Indian Maritime Agenda 2010-2020' vision document in the backdrop, a strategic appreciation of the Indian shipbuilding industry has been undertaken using the SWOT, the Matrix and the Scenario analyses. Based on these analyses, strategies have been formulated for all the stakeholders who can influence the Indian shipbuilding industry. The book then identifies the need for an alchemist leader, who can harmonise all the stakeholders and thereby propel the Indian shipbuilding industry towards achieving the long-term goal of creating a prosperous India.

**Maritime Kent Through the Ages** Stuart Bligh, Sheila Sweetinburgh, Elizabeth Clare Edwards, 2021 A wide-ranging history of the geography and communities of Kent from the earliest times to the present day. Kent, with its long coastline and its important geopolitical position close to London and continental Europe, and on major trading routes between Britain and the wider world, has had a very significant maritime history. This book covers a wide range of topics relating to that history from the earliest times to the present day. It sets Kent's varied coastline and waters in their geological and geographical context, showing how erosion and sediment deposition have contributed to the changing nature of maritime activities and populations. It

examines Kent's strategic role in the defence of the country with the development and redevelopment of coastal defences, including four naval dockyards. It goes on to consider the supporting industries which grew up around the coastline, those which supplied raw materials and agricultural products from the county's hinterland, and its wider national and international trading links. It also discusses the diverse coastal communities of Kent and how they have changed in response to the demands of defence, trade, and changing population and migration patterns. In addition, the book includes detailed case studies which explore particular subject areas as exemplars of the major themes covered by the book. trading links. **Britain's Maritime Empire** John McAleer, 2017 A fascinating new study in which John McAleer explores the maritime gateway to Asia around the Cape of Good Hope and its critical role in the establishment, consolidation and maintenance of the British Empire in the late eighteenth and nineteenth centuries. Situated at the centre of a maritime chain that connected seas and continents, this gateway bridged the Atlantic and Indian Oceans, which, with its commercial links and strategic requirements, formed a global web that reflected the development of the British Empire in the period. The book examines how contemporaries perceived, understood and represented this area; the ways in which it worked as an alternative hub of empire, enabling the movement of people, goods, and ideas, as well as facilitating information and intelligence exchanges; and the networks of administration, security and control that helped to cement British imperial power.

**Transportation Amid Pandemics** Junyi Zhang, Yoshitsugu Hayashi, 2022-09-18 Transportation Amid Pandemics: Practices and Policies is the first reference on pandemics (especially COVID-19) in the context of transport, logistics, and supply chains. This book investigates the relationships between

pandemics and transport and evaluates impacts of COVID-19 and effects of policy responses to address them. It explores how to recover from pandemics, reveals governance for immediate policy responses and future innovations, suggests strategies for post-pandemic sustainable and resilient development, shares lessons of COVID-19 policymaking across countries, and discusses how to transform transport systems for a better future. Transportation Amid Pandemics offers transport researchers and policymakers the scientific evidence they need to support their decisions and solutions against pandemics. Curiosity and research brought me to discover an excellent handbook covering the relations between COVID 19 and the transport reality. It is called Transportation amid Pandemics –Lessons Learned from COVID-19 and has been published this year. 2022 happens to be the year of the 50th anniversary of the first report to The Club of Rome The Limits to Growth. The new book covers evidences from all over the world, and offers policy recommendations from a great variety of perspectives. Ernst Ulrich von Weizsaecker Represents the collective efforts of the World Conference on Transport Research Society (WCTRS) Uniquely deals with intertwined issues of pandemics and transport Investigates both successful and problematic policy measures Emphasizes evidence-based policymaking from cross-sectoral and transdisciplinary perspectives Transfers lessons from the COVID-19 pandemic to future generations

*Straits of Malacca* Donald B. Freeman, 2003 For centuries the Straits of Malacca, a narrow waterway between the Malay peninsula and the island of Sumatra, has been both a major conduit for long distance trade between Asia and the West and one of the most dangerous areas for commercial shipping. Casting a broad net across several disciplines, particularly geography and political economy, Donald Freeman examines the significance of the Straits as both a trade gateway and a choke-point that has forced generations of sailors to run the gauntlet. Rather than the more conventional historical-narrative approach, he offers an innovative adoption of an interdisciplinary, analytical perspective through his use of detailed case studies of trading systems and shipping hazards.

*Business and Economics of Port Management* Wei Yim Yap, 2020-07-06 Business and Economics of Port Management is a comprehensive but concise textbook and reference for insights into the workings of port industry from the business and economics perspectives. The book examines port management from various entities which include the government, port operator, shipping line, logistics companies and other port service providers. It provides in-depth discussions on strategic issues, challenges and disruptions that are faced by this industry. Given the uniqueness of each port and

international nature of the port business, the book comes with useful case studies and lessons from different port regions around the world. Key lessons on challenges and issues faced by port managers, developers and regulators are highlighted and discussed using a combination of professional insights and publicly available information sources. The aim is to illustrate the decision-making process with the purpose of contributing to better outcomes for the industry, government and the public at large. Anyone who is approaching the subject matter will gain utmost understanding of how ports are critical in the global economy and societal well-being.

*Review of Maritime Transport* United Nations Conference on Trade and Development, 2022 The Review of Maritime Transport (RMT) has been published annually since 1968. The flagship report provides an analysis of structural and cyclical changes affecting seaborne trade, ports and shipping, as well as an extensive collection of statistics. Around 80% of the volume of international trade in goods is carried by sea, and the percentage is even higher for most developing countries. The 2022 RMT covers recent developments in maritime logistics related to the Covid-19 pandemic, the war in Ukraine, and a special chapter on consolidation and competition issues in container shipping.
