A Kidnapped Mind Pamela Richardson,2006-05-01 How do we begin to describe our love for our children? Pamela Richardson shows us with her passionate memoir of life with and without her estranged son, Dash. From age five Dash suffered Parental Alienation Syndrome at the hands of his father. Indoctrinated to believe his mother had abandoned him, after years of monitored phone calls and impeded access eight-year-old Dash decided he didn't want to be forced to visit her at all; later he told her he would never see her again if she took the case to court. But he didn't count on his indefatigable mother's fierce love. For eight more years Pamela battled Dash's father, the legal system, their psychologist, the school system, and Dash himself to try and protect her son - first from his father, then from himself. A Kidnapped Mind is a heartrending and mesmerizing story of a Canadian mother's exile from and reunion with her child, through grief and beyond, to peace.

My Iron Knight S. J. Coles,2022-04-12 AN ENEMIES TO LOVERS STORY FROM EXCITING AUTHOR OF LGBTQIA ROMANCE S.J. COLES An Enemy Territory story Dash Cassidy loves his town even more than his bike, but his priorities have a violent shift in gear when an irresistible Russian hitman comes along. Darius &'Dash' Cassidy has ended up president of the small town of Salvation's Iron Knights motorcycle gang, almost by accident. His sister, Zara, is the more business-savvy and ambitious of the two, but their father—the infamous Butch Cassidy—was far from politically correct, so Dash was left in charge. Up to now, Dash has been more than happy to muscle his way through life as his father did before him, even if he is starting to suspect that something might be missing. But now there's a new player in town. Iris Damaro has plans to make Salvation the center of her international smuggling operation. Dash isn't going to sit still while Damaro steamrolls through his town, but when the crime boss sends her alluring Russian number two, Nikita Vasiliev, to do her negotiating, Dash realizes he may be in over his head. Can Dash figure out where his priorities lie before his town—or his heart—is lost forever?

Black Swan: Economic Crises, Volume I Bernur Açıkgöz,2022-10-23 This book presents to the reader the economic, fiscal and financial crises in world history that have had a great impact on the entire world and the fiscal measures taken by governments to combat each crisis since the 1600s in chronological order. Such events are often described as Black Swans, a concept introduced by economist and risk analyst Nassim Nicholas Taleb in the book Fooled By Randomness in 2001, in reference to events that were thought to be impossible but had a huge impact when they did happen. The first part of the book discusses the crisis models in order to allow the reader to better understand the financial, fiscal and economic crises that are detailed in the following chapters. Each chapter starts with an overview of the crisis in question followed by an analysis of the impact on the affected countries. They go on to highlight the causes of the crisis in question, the fiscal and financial measures employed to recover from it and ends on a description of the post-crisis period. Given the profusion of black swan events that the 21st century has already witnessed, this book would be a valuable read for academics and students of economics as well as practitioners and policy makers.

Statistical and Algorithm Aspects of Optimal Portfolios Howard Howan Stephen Shek, 2011 We address three key aspects of optimal portfolio construction: expected return, variance-covariance modeling and optimization in presence of cardinality constraints. On expected return modeling, we extend the self-excited point process framework to model conditional arrival intensities of bid and ask side market orders of listed stocks. The cross-excitation of market orders is modeled explicitly such that the ask side market order size and bid side probability weighted order book cumulative volume can affect the ask side order intensity, and vice versa. Different variations of the framework are estimated by using method of maximum likelihood estimation, based on a recursive application of the log-likelihood functions derived in this thesis. Results indicate that the self-excited point process framework is able to capture a significant amount of the underlying trading dynamics of market orders, both in-sample and out-of-sample. A new framework is introduced, Realized GARCH, for the joint modeling of returns and realized measures of volatility. A key feature is a measurement equation that relates the realized measure to the conditional variance of returns. The measurement equation facilitates a simple modeling of the dependence between returns and future volatility. Realized GARCH models with a linear or log-linear specification have many attractive features. They are parsimonious, simple to estimate, and imply an ARMA structure for the conditional variance and the realized measure. An empirical application with DJIA stocks and an exchange traded index fund shows that a simple Realized GARCH structure leads to substantial improvements in the empirical fit over standard GARCH models. Finally we describe a novel algorithm to obtain the solution of the optimal portfolio problem with NP-hard cardinality constraints. The algorithm is based on a local relaxation that exploits the inherent structure of the objective function. It solves a sequence of small, local, quadratic-programs by first projecting asset returns onto a reduced metric space, followed by clustering in this space to identify sub-groups of assets that best accentuate a suitable measure of similarity amongst different assets. The algorithm can either be cold started using the centroids of initial clusters or be warm started based on the output of a previous result. Empirical result, using baskets of up to 3,000 stocks and with different cardinality constraints, indicates that the algorithm is able to achieve significant performance gain over a sophisticated branch-and-cut method. One key application of this local relaxation algorithm is in dealing with large scale cardinality constrained portfolio optimization under tight time constraint, such as for the purpose of index tracking or index arbitrage at high frequency.

Kiss & Tell, The Complete Series Christy Hayes, 2021-12-03 The Kiss & Tell new adult romance series is a sweet and saucy treat. Three brothers, four roommates, and their messy path to happy ever after. In Stalling For Time, Emily freaks out after finding an engagement ring in best friend Dylan's backpack. When she accidentally puts them in a compromising position, will she admit her feelings for Dylan and finally dump his brother? In The End Run, a sprig of mistletoe gives college football star Zach the chance to affirm his skills to tutor Jenna, and the kiss pits the playmaker against the rule maker. With the game on the line, will they follow the plan, improvise, or make an end run around their hearts? In Kiss & Make Up, forgive and forget is easier said than done ... Youngest brother Nick forces a confrontation between Dylan and Zach at a family gathering that will either drive his brothers apart for good or help them kiss and make up. In Maybe it's You, college student Reagan can handle her neighbor Dash's soiled reputation better than his new and improved pious persona. The more she digs her heels in against the religious freaks he's forced her to interact with, the more she begins to question everything she's built her life upon. When the tide begins to turn, trusting God means putting everything on the line, including Reagan's heart. In Formula For A Perfect Life, college senior Kayla's dreams are crushed by an unplanned pregnancy after a one-night stand with her secret crush, Ben. With the clock ticking and decisions to make, Ben and Kayla embark on a journey where falling in love might be the biggest surprise of all. In Fancy Meeting You Here, when a chance meeting forces former lovers Shelby and Nick to interact, sparks fly and tempers flare. But where there's smoke there's fire, and this time there's no keeping the flames under wraps.

Ecological-Economic Modelling for Biodiversity Conservation Martin Drechsler, 2020-03-26 Presents the state-of-the-art of model-based integration of ecology and economics in the field of biodiversity conservation.

Maybe it's You Christy Hayes, 2019-02-04 Reagan Bellamy's neighbor is everything she never wanted. Despite her best efforts to ignore him and fly under his radar,

Dash Carter refuses to wither under her stare and leave her alone. So what if he's totally hot? Who cares if her roommates think he's adorable? Reagan's too busy to waste time on a loser with musical pipe dreams. Between classes, studies, and her need to stay ahead of the game, she's got too much on her plate to give him the time of day. Dash Carter is a man on a mission. He's done a total 180 and for the first time in a long time feels optimistic about the future. He's clean, he's on a good path, and he's surrounded himself with people who make life better, not worse. Unfortunately, his neighbor—the one girl who's always piqued his interest—still thinks he's a slacker, bothering Dash more than it should. Acting on an opportunity to show Reagan he's a changed man, Dash inadvertently puts her in a difficult position with her new boss and sends her down a path she hasn't the time or inclination to pursue. Desperate to make things right, Dash becomes more invested in her life despite warnings from his mentor to not get involved with someone whose beliefs don't match his own. Reagan's not sure what it says about her that she'd rather deal with Dash the deadbeat than Dash the Bible thumper. The more she digs her heels in against the religious freaks she's forced to interact with, the more she begins to question everything she's built her life upon. When the tide begins to turn in Reagan's heart and her worldview flips upside down, trusting God means putting everything on the line, including her heart.

NFT Non-Fungible Token Claude Kramer, 2021-06-03 We could say that NFTs (non-fungible tokens) succeed because of two human needs put together: generating money and owning goods. Algorithms and the power of computers made it possible: from digitization, replication and infinite reproduction, they extracted a code that allows giving uniqueness to something that by nature does not have it. Find out what NFTs are, how they promote the use of cryptocurrencies, and how the accelerating pace of economic digitization will continue thanks to blockchain.
