The Preference-Driven Lead User Method for New Product Development Alexander Sänn,2017-02-18 Alexander Sänn presents a functional method based on lead user method, preference measurement, and recommendations using collaborative filtering. The

introduced method in this book stimulates input from internal and external sources, predicts basic customers' acceptance, and evaluates this input against pre-defined criteria such as feasibility and existing patents for further concept generation. In sum, the new method addresses common innovation barriers and helps to reduce management uncertainties. This book provides further insights to the use of lead users as innovation sources in three major industries. The author extends the methodological toolbox with practical implications and contributes to the highly discussed topic in innovation management.

Subsurface Solute Transport Models and Case Histories Vyacheslav G.

Rumynin,2012-01-14 The book addresses the development of the basic knowledge of the subsurface solute transfer with a particular emphasis on field data collection and analysis coupled with modeling (analytical and numerical) tool application. The relevant theoretical developments are concerned mainly with the formulation and solution of deterministic mass-transport equations for a wide range of engineering issues in groundwater quality assessment and forecasting. The book gives many computational examples and case studies drawn from the conducted field investigations. The analyzed problems are as

follows: investigation and prediction of groundwater contamination by industrial contaminants and solutions (radionuclides, chloride and nitrate brine) with special focus on the effect of (a) aquifer heterogeneity, anisotropy, and dual porosity, (b) density contrast existing between industrial waste and groundwater, or in density-stratified artesian and coastal groundwater systems; (c) physicochemical interactions that play a major role in retarding (e.g. adsorption) or enhancing (e.g. interactions between dissolved species and mobile colloids) contaminant transport; prediction of the effects of pumping on groundwater quality at wellfields; groundwater dating using stable and radioactive isotopes for prediction and assessment of contamination potential; field and laboratory tests' design and analysis, and monitoring data interpretation; partitioning of surface and subsurface flows using isotope techniques. One of the most essential topics addressed in the book is the migration and fate of radionuclides. Model development is motivated by field data analysis from a number of radioactively contaminated sites in the Russian Federation: near-surface radioactive waste disposal sites and deep-well radioactive waste injection sites. They play a unique role in the advancement of knowledge of the subsurface behavior and fate of many hazardous radionuclides and can be considered as field-scale laboratories. Thus, the book, along with theoretical findings, contains field information, which will facilitate the understanding of subsurface solute transport and the development of a methodology for practical applications to groundwater hydrology.

Transport and Mobility Futures in Urban Africa Ransford A. Acheampong, Karen Lucas, Michael Poku-Boansi, Chinebuli Uzundu, 2022-11-02 This book provides a collection of insightful conceptual and empirical works that situate transport and mobility challenges

in the unique context of individual countries and cities while highlighting commonalities across the African continent. Written from an interdisciplinary perspective, the book covers important themes in transport and mobility including the links between urbanization, urban structure, and accessibility; transport equity and poverty, non-motorized transport, public transport, and the challenges and opportunities of new and emerging transport technologies, and ICT-mediated mobility solutions. Each chapter engages with the normative imperatives that are critical to improving the transport and mobility situations of African urban areas now and in the future.

Numerical Models in Geomechanics G.N. Pande,S. Pietruszczak,2002-01-01 The papers in this volume reflect the current research and advances made in the application of numerical methods in geotechnical engineering. Topics include: instabilities in soil behaviour; environmental geomechanics; and hydro-mechanical coupling in problems of engineering.

Mass Communications and the Influence of Information During Times of Crises Al-Suqri, Mohammed Nasser,Alsalmi, Jamal Mattar,Al-Shaqsi, Obaid Said,2021-12-17 Although global pandemics are not a new phenomenon, the COVID-19 pandemic has taken place in a very different information environment than any pandemic before it. In today's world, information plays a critical role in all areas of life with much of this information being delivered over the internet and social media. People have access to unprecedented amounts of information from both official and unofficial sources. While these channels are beneficial for enabling authorities to obtain information necessary to manage the pandemic, there is also a higher risk of misinformation spread. Mass

Communications and the Influence of Information During Times of Crises provides a comprehensive overview of research conducted into the role of information and the media during times of international crises, particularly examining the COVID-19 pandemic. This text provides a better understanding of how to use the media as a tool for managing pandemics in the event of future global health crises. Covering topics such as crisis communication, data acquisition, and social media usage, this book is a dynamic resource for government policymakers, public health authorities, information and communications specialists, researchers, graduate and post-graduate students, professors, and academicians in a wide range of both public health and information-related disciplines.

Nonfunctional Requirements in Mobile Application Development Varun Gupta, Raj Kumar Chopra, Durg Singh Chauhan, 2021-04-26 Nonfunctional Requirements in Mobile Application Development is an empirical study that investigates how nonfunctional requirements--as compared with functional requirements--by the software engineers during mobile application development. The book empirically analyzes the contribution of nonfunctional requirements to project parameters such as cost, time, and quality. Such parameters are of prime interest as they determine the survival of organizations in highly dynamic environments. The impact of nonfunctional requirements on project success is analyzed through surveys and case studies, both individually and relative to each other. Sources for data collection include industry, academia, and literature. The book also empirically studies the impact of nonfunctional requirements on the overall business success of both the software development firm and the software procuring firm. Project success is examined to determine if it leads to business success. The book provides rich

empirical evidence to place nonfunctional requirements on par with functional requirements to achieve business success in highly competitive markets. This work enhances the body of knowledge through multiple empirical research methods including surveys, case studies, and experimentation to study software engineers focus on nonfunctional requirements at both project and business levels. The book can guide both computer scientists and business managers in devising theoretical and technical solutions for software release planning to achieve business success.

Ad-Hoc Networks and the Mobile Application Security System (MASS). ,2006
Wireless tactical ad-hoc networks that use mobile applications to perform various tasks present a host of security concerns. By mobile applications, we mean applications that can support both moving nodes (e.g., receiver/transmitter on a Humvee) and migrating code (i.e., code that can transport itself via wireless link from one execution node to another). These networks, due to their wireless, open, and hostile operating environment, are more vulnerable to compromise by malicious applications and hosts than traditional networks that possess a clear line of defense. We are developing a solution to this problem that addresses critical aspects of security in ad-hoc mobile application networks. This approach involves preventing unauthorized modification of a mobile application, both by other applications and by hosts, and ensuring that mobile code is authentic and authorized. These capabilities constitute the Mobile Application Security System (MASS). The MASS applies effective, robust security to mobile application-based systems, wireless, and wired networks while minimizing overhead requirements. The MASS consists of innovative security techniques that provide distributed security solutions for mobile application

networks.

Hydrometallurgy Michael L. Free, 2021-11-30 This revised, new edition retains its class-tested coverage of how metals behave in water while updating and expanding information about metals processing methods. The book further retains its emphasis on predicting and engineering the way metals are extracted from ore sources, separated from unwanted entities, recovered as metals, and purified using water based processing. The transformation of minerals to metals requires hydrometallurgical processing for nearly all of the nonferrous metals we use. This book elucidates the associated fundamentals and processing applications as well as related tools to assess processes and performance. The new edition further includes additional photographs, updated drawings, supplementary data, updated descriptive information, and new detail on rare earth elements processing as well as recycling and byproduct recovery of metals.

Interacting Processes in Soil Science R.J. Wagenet, Philippe Baveye, B.A. Stewart, 2020-10-26 *Interacting Processes in Soil Science* focuses on coupled processes in soil. Topics covered in this important volume include the effects of inorganic salts upon water flow, modeling of sorption, transport and transformation of organic solutes, and the effects of microorganisms on silicate clay minerals. Marketing Scheme on Peer-to-Peer (P2P) Communication Software

Anticipating 4G Steffen Dubiel, 2004-11-04 Inhaltsangabe: Abstract: This diploma thesis paper is, after contemplating the current state of ITC / telco's shift towards commoditisation and challenges in facing the upcoming overall mobile / wireless development (beyond 3G, B3G, / 4G) aimed at prosperously resolving a marketing proposition on a quite ingenious Siemens mobile P2P communication solution, named Siemens Anyw@re PocketSERVent, by virtue of the marketers' generic means, the Product-marketing mix dedicated to fundamental questions of product, price, promotion, place (P4). Strategic marketing and ITC business as well as down-to-earth / operational themes will get propelled. The chief emphasis is put on surging virtualisation related to product / svce / property and, as usually less exposed, the shift towards intangible values, foremost customer relationship and momentum of the hi-tech. brand (perception). The intend is to supply a big yet detailed P2P, 3G / B3G and wireless picture to the marketer (even accountant) as well as applied marketing / pricing issues to the S/W developer or mobile techn. expert. After a brief overview (ch. 1), chapter 2 is about introducing the main points rel. peer-to-peer (P2P) it's rather social impacts, technological mindset and ongoing research, as well as contemporary benefits. The intention is to free both the subject and evaluation from hype or byzantine aspects; to present P2P's potential as well as existent contributions to corporations aware of bus. value from IT, paralleling the fashion well-known IT players dominate e.g. Web services. Chapter 3 prepares a general understanding of present-day and forthcoming ITC leitmotivs, more precisely, for why ITC, esp. 3G innovations, have been disappointing. Analysing soft product and service (svce /

svc.) innovations is upon hard value; at the dawn of this decade's decentralisation / mobilisation and virtualisation following results and side effects of globalisation the tractate's author is going to constantly question whether proven and established marketing practice can answer the train of virtual i.e. through-and-through digital products, value chains, organisations or business and / or value creation communities. Nevertheless ch. 3's focal point is the wireless or mobile wireless, resp., upgrowth (convergence rel. mobile IP, P2P, B3G / 4G). At beginning of the new millennium telcos are forced to get out of the industrial age's proprietary hardware and services. Less because of customer's [...]
