Building Material Estimates and Rates Build Up Moremi Mareka, 2009-05-29 The script is entitled Building Estimates and Rates Build Up .and aims at empowering Technical educators, Technical, Brigades and Community colleges students, Apprentices and individuals in the building profession with the necessary skill and knowledge. As an experienced professional in the building industry, quantity surveyor(building material estimator) and a former lecturer for technical colleges, I have realized that there is need to come up with a book that will help students, apprentices and individual builders to easily understand the subject of estimating and rates build up to enable them to apply the skill whenever they have projects. Currently, individual builders, apprentices, and students find it difficult to correctly and accurately estimate the quantities of materials required for proposed projects .Pricing is also a difficult task for most of them as they do not have an idea of how to build up rates. Presently our brigades and technical colleges do not have a relevant book to deal with Estimates. Building Estimates and Rates build up provides a solution to such a problem. The book provides a solution in that it brings together pure mathematics and practical estimation, to avoid a situation whereby students end up failing to realize that the same formulas that are used in Mathematics (math) are applicable in the estimates. I strongly believe that the book will be able to even penetrate the international market.

Piping and Pipeline Calculations Manual Philip Ellenberger,2014-01-22 Piping and Pipeline Calculations Manual, Second Edition provides engineers and designers with a quick reference guide to calculations, codes, and standards applicable to piping systems. The book considers in one handy reference the multitude of pipes, flanges, supports, gaskets, bolts, valves, strainers, flexibles, and expansion joints that make up these often complex systems. It uses hundreds of calculations and examples based on the author's 40 years of experiences as both an engineer and instructor. Readers will come away with a clear understanding of how piping systems fail and what the code requires the designer, manufacturer, fabricator, supplier, erector, examiner, inspector, and owner to do to prevent such failures. The book enhances participants' understanding and application of the spirit of the code or standard and form a plan for compliance. The book covers American Water Works Association standards where they are applicable. Estimating for Building & Civil Engineering Work John Williams,Spence geddes,2013-02-01 It deals in a practical and reasonable way with many of the estimating problems which can arise where building and civil engineering works are carried out and to include comprehensive estimating data within the guidelines of good practice. The early part of the book has been completely rewritten to contain chapters useful to students and practitioners alike for the development of the estimating process resulting in the presentation of a tender for construction works. The second and major part of the book contains estimating data fully updated for the major elements in building and civil engineering work, including a new chapter on piling, and a wealth of constants for practical use in estimating. The estimating examples are based on the current edition of the Standard Method of Measurement for Building Works (SMM7). The comprehensive information on basic principles of estimating found in 'Spence Geddes' are still as valid today as the first edition. In this edition the prevailing rates of labour and costs of materials are taken whenever possible as a round figure. Readers will appreciate in the construction industry that prices are continually changing, rise and fall, and that

worked examples should therefore be used as a guide to method of calculation substituting in any specific case the current rates applicable to it. In the case of plant output dramatic increases have been experienced in productivity over recent years and again estimators with their own records should substitute values appropriate to their work.
