

Measure 11

Carl Schachter

Oregon's Measure 11 Sentencing Reform Nancy Merritt, Terry Fain, Susan Turner, 2004 In 1994, Oregon voters passed Measure 11, a measure that imposed long mandatory prison terms for 16 designated violent and sex-related offenses, prohibited earned time, and provided for mandatory waiver of youthful offenders to adult court. This measure stood in sharp contrast to sentencing practices at the time, overlaying the state's existing sentencing guidelines system for selected offenses, increasing the length of prison terms imposed, and reducing judicial discretion at the sentencing phase. Proponents of the measure felt that it would improve public safety by both deterring future criminal behavior and increasing the length of time that serious felons spend in prison. Opponents, on the other hand, believed that the measure would adversely affect criminal justice system operations and reduce system integrity. In 1998, the Oregon Criminal Justice Commission (OCJC) received funding from the National Institute of Justice to study the implementation and outcomes of Measure 11 across the state as a whole, and within three counties: Multnomah, Lane, and Marion. This study, conducted by RAND under subcontract to the OCJC, draws upon a number of state level databases and interviews with state and county stake-holders to answer key questions about how the measure was developed, its relationship to the existing sentencing practices in the state, impacts on the types of sentences imposed, admissions to prison, and sentence lengths imposed, as well as how sentencing practices changed for both adults and youths. Our original proposal included an analysis of prosecutorial decisions. Though extensive efforts were made to obtain county prosecutor data during the study time frame, these data were not available. Further, preliminary analyses showed the statewide Oregon Judicial Information Network (OJIN) data to be unsuitable for this type of analysis.

The Art of Tonal Analysis Carl Schachter, 2015-12-02 Carl Schachter is the world's leading practitioner of Schenkerian theory and analysis. His articles and books have been broadly influential, and are seen by many as models of musical insight and lucid prose. Yet, perhaps his greatest impact has been felt in the classroom. At the Mannes College of Music, the Juilliard School of Music, Queens College and the Graduate Center of the City University of New York, and at special pedagogical events around the world, he has taught generations of musical performers, composers, historians, and theorists over the course of his long career. In Fall 2012, Schachter taught a doctoral seminar at the CUNY Graduate Center in which he talked about the music and the musical issues that have concerned him most deeply; the course was in essence a summation of his extensive and renowned teaching. In *The Art of Tonal Analysis*, music theorist Joseph Straus presents edited transcripts of those lectures. Accompanied by abundant music examples, including analytical examples transcribed from the classroom blackboard, Straus's own visualizations of material that Schachter presented aurally at the piano, and Schachter's own extended Schenkerian graphs and sketches, this book offers a vivid account of Schachter's masterful pedagogy and his deep insight into the central works of the tonal canon. In making the lectures of one of the world's most extraordinary musicians and musical thinkers available to a wide audience, *The Art of Tonal Analysis* is an invaluable resource for students

and scholars of music.

The Oxford Handbook of Crime and Criminal Justice Michael Tonry, 2011-09-07 This handbook provides an accessible, high-quality, and comprehensive introduction to and overview of the operation of the American criminal justice system. It is divided into five sections covering the purposes and functions of the system, its problems and priorities, and its main institutions-police and policing, prosecution and sentencing, and community and institutional corrections. Highly regarded in the field, Michael Tonry brings together a mix of established, senior scholars and up-and-coming writers to provide authoritative and cutting-edge contributions on hot-button topics, from the justice system's handling of immigration and terrorism to racial profiling, parole, and re-entry, as well as bread-and-butter issues like incapacitation, jails, drugs, and police strategy. As countries vary substantially in the detailed operation of some agencies and few scholars have detailed knowledge of the operation of two or more countries' systems, the focus is principally, though not exclusively, on the American justice system.

Decision Systems and Nonstochastic Randomness V. I. Ivanenko, 2010-05-17 Decision Systems and Non-stochastic Randomness presents the first mathematical formalization of the statistical regularities of non-stochastic randomness and demonstrates how these regularities extend the standard probability-based model of decision making under uncertainty, allowing for the description of uncertain mass events that do not fit standard stochastic models. The formalism of statistical regularities developed in this book will have a significant influence on decision theory and information theory as well as numerous other disciplines.

Symbolic and Quantitative Approaches to Reasoning with Uncertainty Thomas D.

Nielsen, Nevin L. Zhang, 2003-03-23 Since 1991, the European Conference on Symbolic and Quantitative Approaches to Reasoning with Uncertainty (ECSQARU) has been a major forum for advances in the theory and practice of reasoning and decision making under uncertainty. The scope of ECSQARU is wide and includes, but is not limited to, fundamental issues, representation, inference, learning, and decision making in qualitative and numeric paradigms. The first ECSQARU conference (1991) was held in Marseilles, and since then it has been held in Granada (1993), Fribourg (1995), Bonn (1997), London (1999) and Toulouse (2001). This volume contains the papers that were presented at ECSQARU 2003, held at Aalborg University, Denmark, from July 2 to July 5, 2003. The papers went through a rigorous reviewing process: three program committee members reviewed each paper monitored by an area chair, who made a final recommendation to the program co-chairs. In addition to the regular presentations, the technical program for ECSQARU 2003 also included talks by three distinguished invited speakers: Didier Dubois, Philippe Smets and Jeroen Vermunt. Didier Dubois and Jeroen Vermunt also contributed to this volume with papers on the subjects of their talks.

Integral Representation Theory Jaroslav Lukeš, Jan Malý, Ivan Netuka, Jirí Spurný, 2010-01-01

This ambitious and substantial monograph, written by prominent experts in the field, presents the state of the art of convexity, with an emphasis on the interplay between convex analysis and potential theory; more particularly, between Choquet theory and the Dirichlet problem. The book is unique and self-contained, and it covers a wide range of applications which will appeal to many readers.

Measure theory and Integration G De Barra, 2003-07-01 This text approaches integration via measure theory as opposed to measure theory via integration, an approach which makes it easier to

grasp the subject. Apart from its central importance to pure mathematics, the material is also relevant to applied mathematics and probability, with proof of the mathematics set out clearly and in considerable detail. Numerous worked examples necessary for teaching and learning at undergraduate level constitute a strong feature of the book, and after studying statements of results of the theorems, students should be able to attempt the 300 problem exercises which test comprehension and for which detailed solutions are provided. Approaches integration via measure theory, as opposed to measure theory via integration, making it easier to understand the subject Includes numerous worked examples necessary for teaching and learning at undergraduate level Detailed solutions are provided for the 300 problem exercises which test comprehension of the theorems provided

Uniform Spaces and Measures Jan Pachl, 2012-10-16 This book addresses the need for an

accessible comprehensive exposition of the theory of uniform measures; the need that became more critical when recently uniform measures reemerged in new results in abstract harmonic analysis. Until now, results about uniform measures have been scattered through many papers written by a number of authors, some unpublished, written using a variety of definitions and notations. Uniform measures are certain functionals on the space of bounded uniformly continuous functions on a uniform space. They are a common generalization of several classes of measures and measure-like functionals studied in abstract and topological measure theory, probability theory, and abstract harmonic analysis. They offer a natural framework for results about topologies on spaces of measures and about the continuity of convolution of measures on topological groups and semitopological semigroups. The book is a reference for the theory of uniform measures. It includes a self-contained development of the theory with complete proofs, starting with the necessary parts of the theory of uniform spaces. It presents diverse results from many sources organized in a logical whole, and includes several new results. The book is also suitable for graduate or advanced undergraduate courses on selected topics in topology and functional analysis. The text contains a number of exercises with solution hints, and four problems with suggestions for further research.

A Modern Theory of Integration Robert Gardner Bartle, 2001 This book is an introduction to a theory of the integral that corrects the defects in the classical Riemann theory and both simplifies and extends the Lebesgue theory of integration.

Convexity and Optimization in Banach Spaces Viorel Barbu, Teodor Precupanu, 2012-01-03 An updated and revised edition of the 1986 title *Convexity and Optimization in Banach Spaces*, this book provides a self-contained presentation of basic results of the theory of convex sets and functions in infinite-dimensional spaces. The main emphasis is on applications to convex optimization and convex

optimal control problems in Banach spaces. A distinctive feature is a strong emphasis on the connection between theory and application. This edition has been updated to include new results pertaining to advanced concepts of subdifferential for convex functions and new duality results in convex programming. The last chapter, concerned with convex control problems, has been rewritten and completed with new research concerning boundary control systems, the dynamic programming equations in optimal control theory and periodic optimal control problems. Finally, the structure of the book has been modified to highlight the most recent progression in the field including fundamental results on the theory of infinite-dimensional convex analysis and includes helpful bibliographical notes at the end of each chapter.

David Lewin's Morgengruß David Schwarz, Richard Lawrence Cohn, 2015 This title presents for the first time, an extended 1974 essay by David Lewin on 'Morgengruß', a 23 measure strophic song from Schubert's 'Die Schöne Müllerin'. The essay was central to Lewin's graduate teaching, and copies of it have circulated by hand through the music-scholarly community. Yet Lewin initially wrote it for an audience of non-specialists. In addition, the book presents a preface, introduction, and three critical essays that place Lewin's work within the context of late twentieth-century music theory and the humanities - particularly phenomenology.

Analytical Studies in World Music Michael Tenzer, 2006-05-25 Combining the approaches of ethnomusicology and music theory, Analytical Studies in World Music offers fresh perspectives for thinking about how musical sounds are shaped, arranged, and composed by their diverse makers worldwide.
