Disaster Management and Emergency Medicine in the Asia-Pacific Region: Current Practices and Future Directions Kenneth N. K. FONG,Ben Y. F. FONG,2023-07-19 Around

the world, people and societies are at risk of being affected by disasters, both natural and man-made. In the face of climate change and human activity, the threat posed by unexpected disasters is likely to increase in future. This book, the first of its kind in Hong Kong, offers insights from experts in healthcare and higher education both locally and further afield. Some of the authors have first-hand experience with various elements of disaster management through such events as the 2008 earthquake in Sichuan, the COVID-19 pandemic, and large-scale competitions including the Standard Chartered Hong Kong Marathon. Key learnings and recommendations are presented in three sections: disaster management and reconstruction, including what we can learn from past earthquakes; the importance of healthcare and emergency medicine in disasters and community events; and the way forward, in particular how technology and systems thinking can be used for disaster mitigation. By shedding light onto future work in disaster management and emergency medicine in Hong Kong and East Asia, this book aims to contribute to community resilience in the region and beyond. It will be useful for tertiary and postgraduate programmes, teachers and academics, practitioners, healthcare providers, policymakers, and community leaders.

Medical Leadership and Management Geraldine MacCarrick, 2014-09-20 Leadership and management in the context of healthcare is about improving the quality of medical care delivered at all levels. Doctors frequently lead healthcare teams with responsibility for significant clinical resource which requires management and leadership skills regardless of specialty. A growing body of literature has also argued that medical leadership plays an integral part in the success and effectiveness of organisational change in the health sector. Being an effective medical leader requires a different set of skills from being a good clinician. It is therefore important that future medical graduates are supported and equipped with the high-level skills required for their role (e.g. leading and developing multidisciplinary teams, understanding organizational systems, processes and interdependencies, redesigning services and working collaboratively with a wide range of stakeholders). This growing interest across the globe in preparing medical graduates for the role of medical manager and leader requires a comprehensive approach to education and training which begins at an undergraduate level. As an undergraduate these skills are frequently neglected or not taught well. However, with the correct resources and using a case-based approach the undergraduate program can easily support the development of practical leadership and management skills. The case studies and supporting text will provide an overview of the fundamentals of leadership theory and practice relevant to medical students, junior doctors and specialty trainees. Using internationally recognized competency frameworks this book will support the acquisition of knowledge and skills relevant to medical management and leadership such as project management, intelligent leadership, presentation skills, audit, organizational decision making and engaging relevant stakeholders.

Patient Safety and Quality Ronda Hughes, 2008 Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043). - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk/>

Essentials of Management for Healthcare Professionals Hari Singh,2017-12-15 Medical care is an industry and private providers and hospitals are the major service providers. They operate on business principles. Hospitals are getting highly specialized and complex. The diagnostics and therapeutics are technology intensive. Private establishments have to compete with one another to remain in business. They strive to induct the best talent and latest technical know-how, resulting in ever-increasing costs to patients. Patients, who pay high charges, demand quality as a matter of right. To meet the challenge, hospitals are constrained to bring in professionalism in their systems and services. They appoint qualified professional managers to manage their clinics and hospitals with a view to sparing health professionals to focus on clinical care. Whether right or wrong, 'management' is often associated with authority and power. As a result, the medical professionals are reduced to secondary level in some organizations. To retain commanding positions in medical organizations, it has become necessary for the healthcare professionals to learn 'management', at least its basics. On the other hand, non-medical managers while managing healthcare services do not get the required cooperation from the medical professionals, as the latter are often secretive and not willing to share medical knowledge. If medical knowledge is demystified, non-medical managers can perform many functions in healthcare organizations proficiently. Both medical and non-medical managers can complement each other in providing quality healthcare services. The book aims to orient clinicians (including physicians and nurses) and other healthcare professionals on the essentials of business management and to familiarize them with management terms and jargon. They can learn to be effective managers besides being health professionals. Similarly, non-medical managers can get familiarized to nuances of clinical care and special managerial requirements of healthcare facilities. They all will be able to relate processes in healthcare settings with the concepts of business management. They can develop expertise on patient relationship management

Hospitals & Health Care Organizations David Edward Marcinko,Hope Rachel Hetico,2012-07-06 Drawing on the expertise of decision-making professionals, leaders, and managers in health care organizations, *Hospitals & Health Care Organizations: Management Strategies, Operational Techniques, Tools, Templates, and Case Studies* addresses decreasing revenues, increasing costs, and growing consumer expectations in today's increasingly competitive health care market. Offering practical experience and applied operating vision, the authors integrate Lean managerial applications, and regulatory perspectives with real-world case studies, models, reports, charts, tables, diagrams, and sample contracts. The result is an integration of post PP-ACA market competition insight with Lean management and operational strategies vital to all health care administrators, comptrollers, and physician executives. The text is divided into three sections: Managerial Fundamentals Policy and Procedures Strategies and Execution Using an engaging style, the book is filled with authoritative guidance, practical health care-centered discussions, templates, checklists, and clinical examples to provide you with the tools to build a clinically efficient system. Its wide-ranging coverage includes hard-to-find topics such as hospital inventory management, capital formation, and revenue cycle enhancement. Health care leadership, governance, and compliance practices like OSHA, HIPAA, Sarbanes-Oxley, and emerging ACO model policies are included. Health 2.0 information technologies, EMRs, CPOEs, and social media collaboration are also covered, as are 5S, Six Sigma, and other logistical enhancing flow-through principles. The result is a must-have, how-to book for all industry participants.
