The Nation's Health Care Bill Jerry Cromwell,Deborah Healy,Elizabeth Seeley,Diana Trebino,Genevieve Cromwell,2013-07-28 During the past 50 years, spending on health care services—by households, private businesses, and state and federal governments—increased dramatically and now approaches one out of every five dollars spent in the United States. The benefits of health care spending have not been distributed equally across the population, with less going to a growing number of uninsured people. Moreover, the United States does not realize proportional value for its spending on health care. It spends more per capita than any of six other industrialized countries but ranks below them on measures of health care quality, efficiency, and equity. Unable to sustain rising contributions to health insurance, employers are shifting more of the cost to workers, thereby increasing the number who cannot afford coverage. Federal, state, and local governments have taken on some of these costs by subsidizing the health services of elderly, disabled, and poor people. Health spending, once a small fraction of the federal budget, now exceeds spending on defense or Social Security. State and local governments now devote more of their own taxes to health care than to elementary and secondary education, despite the federal government's paying for the majority of Medicaid spending. The data in this chartbook indicate that the financial burden of health care spending presents a disproportionate burden on uninsured and sick people, small businesses,

and low-wage workers. In addition to the magnitude and maldistribution of health spending, society's "opportunity costs" are high: Private businesses, households, and state and federal governments could have made other highly productive purchases had health spending not exceeded economy-wide growth. For the government, health care spending decreases the money available for other investments, such as education, infrastructure, and debt reduction. As health costs increase and the population ages, the historical reallocation of US productive capacity to health care is unsustainable. With pressing needs elsewhere, the country must make the health system more efficient, equitable, and affordable. Passage of the Patient Protection and Affordable Care Act (ACA) by Congress in 2010 was a comprehensive step to contain health care costs, particularly for families, while extending health care coverage to millions of uninsured people. The potential benefits of the ACA include better access to health professionals and prescription drugs, decreased medical debt and fewer subsequent bankruptcy filings, and lower labor costs for small businesses. Constrained health care spending will allow businesses and government to make more cost-effective investments elsewhere without raising prices or burdening taxpayers. With this chartbook as a baseline, users can monitor changes that result from the ACA and take future steps to enhance the cost-effectiveness of the US health care system.

How will the demographic trend impact the healthcare industry in the next 10-20 years? Marie-Isabell Rust, 2018-05-30 Essay from the year 2018 in the subject Business economics - Miscellaneous, grade: 1,0, University of Applied Sciences Dresden (International Business), course: International Business Environment, language: English, abstract: The tendency to get older is not only an advantage, it also implies challenges for the individual, family and the society by an increased pressure on the healthcare industry due to increased expenses and the need to change existing paradigm. The demographic trend is the major factor in determining the future development of the healthcare sector. This essay will clearly show the significant shift in demography and its consequences, the current status of the healthcare industry and the required development to master the demographic hurricane. I will prove that the current healthcare business models and approaches will not be able to manage the foreseeable challenges of an aging population. I will also outline potential solutions and required changes. The derived conclusions are only valid for developed geographies.

Healthcare Upside Down Henry Buchwald, 2022 Inspired by witnessing and experiencing the changes in healthcare and its delivery over the past 50 years, Dr. Henry Buchwald observes and comments on the current state of healthcare in the United States. His narrative includes the history, the historical data, and personal experiences of a healthcare system that has moved away from caring, first and foremost, for patients. This expensive, impersonal system, he believes may not be in the best interest either of the nation or of the people it purports to heal. As the title suggests, it appears that healthcare has been turned upside down to serve the administrators of the system and away from its basic function of offering the best care for patients. With this basic principle in mind, the topics presented in this book provide and discuss healthcare statistics and alterations to the language of medicine. The chapters themselves examine the transformations to the medical school, the clinic and the office, the hospital, and the practice. Additional chapters discuss the role of the payers, public health research, as well as pandemics, including COVID-19, the advantages and disadvantages of socialized medicine, as well as the broken doctor/patient relationship. Finally, Dr. Buchwald offers thoughts on the areas in which future healthcare efforts can most fruitfully be expended. Analysing today's pervading administrative domination of essentially

every facet of healthcare, Healthcare Upside Down thoughtfully considers the variety of ways in which we can turn the current healthcare system right-side up to serve those who should be the ultimate beneficiaries - all of us as patients, now and in the future.
