Anti-infective Guidelines for Community-acquired Infections, 2019

The Little Black Book of Primary Care Daniel K. Onion, 2006 Thoroughly revised and updated, the fifth edition of this classic pocket-sized handbook provides comprehensive, concise, evidence-based information on diagnosis and treatment across the spectrum of illness and injury in the primary care setting. Makes a great reference for solving pressing problems on the ward or in the clinic.

Infectious Diseases Frederick S. Southwick, 2007-10-22 Gain a full understanding of clinical infectious diseases in just thirty days A Doody's Core Title for 2011! No other resource makes clinical infectious diseases more manageable and easy to master than Infectious Diseases: A Clinical Short Course. This one-of-a-kind self-instruction tool is organized by system/region as opposed to pathogens -- simulating how common pathogens and disorders would be encountered in rounds or in practice. For this reason, this remarkable resource is unsurpassed for learning how to associate pathogens with their corresponding impact on actual patients. Features: A true, concise "short course" format that can be read and understood in the span of a 30-day infectious disease rotation Numerous case examples -- appropriate for PBL and integrated curricula -- to further highlight clinical application of the content Key points summaries and Guiding Questions that

drive home core concepts and aid comprehension 24 eye-catching color plates that depict major pathogens and reinforce the impact of clinical infection NEW! An even more concise and streamlined format designed to help you learn the most in the least amount of time

Adult Infectious Disease Bulletpoints Handbook Robert Gullberg, Robert M Gullberg, M D, 2021-01-25 Because of his years of experience, Dr. Gullberg knows the best format for learning regarding a core of Infectious Disease topics. Bullet points are a very effective method. Dr. Gullberg has handpicked the twenty most common areas in the field of Infectious Diseases that students must study. The book will be a very handy reference for clinical learning, National Boards, and PANCE testing. The resources for this text are too numerous to count, and many are the physicians and colleagues who have mentored Dr. Gullberg over the last 30 years. Robert M. Gullberg M.D., F.A.C.P., is from Park Ridge, Illinois and was educated at Northwestern University with a degree in inorganic Chemistry. He attended the University of Illinois Medical School, graduating in 1981, followed by internship and residency in Internal Medicine at the Evanston Hospital, then affiliated with Northwestern University Medical School. He had excellent training there under the tutorege of Dr. Steven Kurtides, Chief of Medicine. His residency was followed by a Fellowship in Infectious Diseases at Northwestern University in Chicago, Illinois where he was mentored by Dr. John Phair. Dr. Gullberg is double boarded in Internal Medicine and Infectious Disease and is an Adjunct Professor of Clincal Medicine/Infectious Disease. He has practiced Internal Medicine and Infectious Diseases in a large community hospital for over three decades. During that time, he has trained hundreds of medical students, PA students, and nursing students at all levels. He is a seasoned lecturer in

clinical areas of Clinical Infectious Diseases, and he continues to teach principles of Infectious Diseases on a daily basis.

Infection Control Manual for Hospitals Gail Bennett, Gloria Morrell, 2006 In the face of tougher federal regulations, ever-changing JCAHO standards, bioterrorist threats, evolving pandemics, large-scale disasters, emerging infectious diseases, and multidrug-resistant organisms, your hospital's IC efforts are more critical than ever before. Meet these complex new challenges head on with the newly revised and updated edition of Infection Control Manual for Hospitals.

Healthcare-Associated Infections in Children J. Chase McNeil, Judith R. Campbell, Jonathan D. Crews, 2018-10-30 With advances in technology and medical science, children with previously untreatable and often fatal conditions, such as congenital heart disease, extreme prematurity and pediatric malignancy, are living longer. While this is a tremendous achievement, pediatric providers are now more commonly facing challenges in these medical complex children both as a consequence of their underlying disease and the delivery of medical care. The term healthcare-associated infections (HAIs) encompass both infections that occur in the hospital and those that occur as a consequence of healthcare exposure and medical complexity in the outpatient setting. HAIs are associated with substantial morbidity and mortality for the individual patient as well as seriously taxing the healthcare system as a whole. In studies from the early 2000s, over 11% of all children in pediatric intensive care units develop HAIs and this figure increases substantially if neonatal intensive care units are considered. While progress has been made in decreasing the rates of HAI in the hospital, these infections remain a major burden on the medical system. In a study published in 2013, the annual

estimated costs of the five most common HAIs in the United States totaled \$9.8 billion. An estimated 648,000 patients developed HAIs in hospitals within the US in 2011 and children with healthcare-associated bloodstream infection have a greater than three-fold increased risk of death. While a number of texts discuss HAIs in the broader context of infectious diseases or pediatric infectious diseases (such as Mandell's Principles and Practice of Infectious Diseases or Long and Pickering's Principles and Practice of Pediatric Infectious Diseases) no single text specifically focuses on the epidemiology, diagnosis and management of HAI in children. Many infectious diseases texts are organized based on the microbiology of infection and from this starting point then discussing the clinical syndromes associated with the organism of interest. For instance, a chapter on *Staphylococcus aureus* may contain a brief discussion of the role of *S. aureus* in surgical site infections in the wider context of all staphylococcal disease. For clinicians caring for children at the bedside, however, the clinical syndrome is typically appreciated and intervention necessary prior to organism identification. We propose a text that details both the general principles involved in HAIs and infection prevention but also provides a problem oriented approach. Such a text would be of interest to intensivists, neonatologists, hospitalists, oncologists, infection preventionists and infectious diseases specialists. The proposed text will be divided into three principle sections: 1) Basic Principles of Infection Control and Prevention, 2) Major Infectious Syndromes and 3) Infections in Vulnerable Hosts. Chapters in the Major Infectious Syndromes section will include discussion of the epidemiology, microbiology, clinical features, diagnosis, medical management (or surgical management as appropriate) and prevention of the disease entity

of interest. Chapters will seek to be evidenced based as much as possible drawing from the published medical literature as well as from clinical practice guidelines (such as those from the Infectious Diseases Society of America) when applicable. We intend to include tables, figures and algorithms as appropriate to assist clinicians in the evaluation and management of these often complex patients. Finally, we intend to invite authors to participate in this project from across a number of medical specialties including infectious diseases, infection control, critical care, oncology and surgery to provide a multidisciplinary understanding of disease. It is our intent to have many chapters be co-written by individuals in different subspecialties; for instance, a chapter on ventilator-associated pneumonia may be co-written by both infectious disease and critical care medicine specialists. Such a unique text has the potential to provide important guidance for clinicians caring for these often fragile children.

Hospital Infection: From Miasmas to MRSA Graham A. J. Ayliffe, Mary P. English, 2003-06-05 This is an absorbing account of the continuing battle to control hospital infections, from the earliest days of hospital care when bad air or miasma was thought to be the cause, to the present day and the emergence of antibiotic-resistant 'superbugs' such as MRSA and necrotizing fasciitis. It succeeds on many levels: as a fascinating social history of hospital care from mediaeval times, when patients endured verminous conditions, to the present day; as a survey of the rise, fall and emergence of new nosocomial infections; and as a chronological account of the emergence of medical microbiology and infection control. The pivotal roles of key personalities such as Joseph Lister, Florence Nightingale, Louis Pasteur and Robert Koch are highlighted, and the history of this subject illuminates not only why hospitals and infections have had such an intimate and long relationship but one that seems destined to continue well into the future.

Device Associated Infections, An Issue of Infectious Disease Clinics - E-Book Preeti N. Malani, 2012-09-14 Optimal management of device associated infections requires a collaborative approach among surgical and medical specialists—a need that is central to this issue of Infectious Diseases Clinics of North America. In addition to the epidemiology, management, and prevention of commonly encountered device associated infections, each review offers technical background on specific devices and related operative procedures. Areas of ongoing investigation are highlighted including innovative concepts for the prevention of biofilm formation and biofilm directed therapeutics. Emerging issues related to reuse of medical devices in

resource limited settings are also considered.
