The chapter describing the shortcomings of laboratory test report forms is aimed directly at doctors, laboratorians, and other health care providers with examples of laboratory test report formats that can improve communication between the consumer, the clinical laboratory, and the health care provider. Penny Durgin, A.D.N.P., Nurse Practitioner Great idea for a book! I'm sure it will be a great help to patients trying to interpret their lab test results, and it will surely be an aid to medical caretakers in discussing test reports with their patients - and it will be on my bookshelf! Elwin Falkenham, M.D., Family Practitionerthe explanations of the lab tests make for fast, easy reading. I hope many doctors and nurse practitioners will read it and learn a few things they really need to know in dealing with apprehensive patients. Annette McMahon, High School teacher The reach of the subject of laboratory testing is really comprehensive. A reader can go to whatever depth he or she chooses; many will find satisfaction in the informal style and avoidance of medical language that is incomprehensible to patients. John L. Meyer II, M.D., FASCP, Community hospital Pathologist Using this book, patients will be able to understand the significance of their laboratory tests results. So often explanations from doctors in their offices are too hurried, too technical, and too upsetting for patients to comprehend what their tests really mean. Medical Tests in Context Randi Minetor, 2019-10-07 This encyclopedia examines more than 125 of the most important and commonly performed medical tests, providing readers with information about how and why they are performed and how each test contributes to monitoring health and diagnosing and treating medical conditions. Whether it's to proactively monitor health, diagnose a condition, or assess how well a particular treatment is working, we all undergo a variety of medical tests throughout our lives. While these tests provide valuable information for doctors and patients, they can sometimes carry significant risks, provide ambiguous or incorrect results, or raise more questions than they answer. Contrary to what some may think, medical testing isn't a simple yes or no science carried out by computers in a lab—it is a dynamic process that relies heavily on human detective work and interpretation. *Medical Tests in Context: Innovations and Insights* highlights more than 125 tests performed across a wide range of medical specialties. Each entry in this encyclopedia follows a standardized format that provides readers with information about how, when, and why the test is conducted; the preparation and risks; how results are determined and where errors might occur; and its history. A collection of case studies offers real-world examples of the successes—and shortcomings—of medical testing.

Laboratory Test requesting Appropriateness and Patient Safety María Salinas, Maite Lopez-Garrigos, Enrique Rodriguez-Borja, Álvaro Blasco, Arturo

Carratalá,2016-12-05 The global medical process is a chain of different medical multidisciplinary procedures. The success in global Patient Safety will depend on the Safety of the consecutive medical processes that intervene in this complex system. Laboratory data is an essential part of health care, indeed it is used in 70% of clinical decisions. Inappropriate laboratory test over requesting is extremely frequent. The prevalence of under requesting has been less studied. The consequences of under requesting are clear, we are missing a diagnosis. Inappropriate over requesting can result not only in a problem of cost but also in a problem regarding patient safety. Additionally, another important consequence of inappropriate tests over requesting is that such amount of unnecessary tests has probably contributed to a significant increase in the volume of those over the last years. In all, there is general consensus that the inadequacy of test requesting must be corrected through strategies and monitored over time through indicators to assure the optimal laboratory contribution to clinical decision-making and patient safety.
