**Primer on Nephrology** Mark Harber, 2022-05-27 This new edition provides readers with a practice-based approach to all aspects of clinical nephrology. Extensively updated, it offers invaluable practical advice on how to manage specific illnesses and, uniquely, the importance of establishing systems and processes to improve patient safety, enhance the patient pathway and guidance on how to systematically improve clinical governance. A unique feature of this book are the tips and tricks and, suggestions for avoiding common errors based on the vast experience of the authors. In addition, the Editor has collated a list of links to international registries and guidelines as well as selected disease specific organisations, providing both clinicians and patients with access to helpful and recommended resources. Designed and written in a user-friendly fashion, *Primer in Nephrology* continues to be the definitive reference for practising nephrologists, trainees and non-nephrologist who encounter renal patients in their daily practice.

*Principles and Practice of Clinical Trials* Steven Piantadosi, Curtis L. Meinert, 2022-07-19 This is a comprehensive major reference work for our SpringerReference program covering clinical trials. Although the core of the Work will focus on the design, analysis, and interpretation of scientific data from clinical trials, a broad spectrum of clinical trial application areas will be covered in detail. This is an important time to develop such a Work, as drug safety and efficacy emphasizes the Clinical Trials process. Because of an immense and growing international disease burden, pharmaceutical and biotechnology companies continue to develop new drugs. Clinical trials have also become extremely globalized in the past 15 years, with over 225,000

international trials ongoing at this point in time. Principles in Practice of Clinical Trials is truly an interdisciplinary that will be divided into the following areas: 1) Clinical Trials Basic Perspectives 2) Regulation and Oversight 3) Basic Trial Designs 4) Advanced Trial Designs 5) Analysis 6) Trial Publication 7) Topics Related Specific Populations and Legal Aspects of Clinical Trials The Work is designed to be comprised of 175 chapters and approximately 2500 pages. The Work will be oriented like many of our SpringerReference Handbooks, presenting detailed and comprehensive expository chapters on broad subjects. The Editors are major figures in the field of clinical trials, and both have written textbooks on the topic. There will also be a slate of 7-8 renowned associate editors that will edit individual sections of the Reference.

MHealth World Health Organization, 2011 The use of mobile and wireless technologies to support the achievement of health objectives (mHealth) has the potential to transform the face of health service delivery across the globe. A powerful combination of factors is driving this change. These include rapid advances in mobile technologies and applications, a rise in new opportunities for the integration of mobile health into existing eHealth services, and the continued growth in coverage of mobile cellular networks. According to the International Telecommunication Union (ITU), there are now over 5 billion wireless subscribers; over 70% of them reside in low- and middle-income countries. For the first time the World Health Organization's Global Observatory for eHealth (GOe) has sought to determine the status of mHealth in Member States; its 2009 global survey contained a section specifically devoted to mHealth. Completed by 114 Member States, the survey documented for analysis four aspects of mHealth: adoption of initiatives, types of

initiatives, status of evaluation, and barriers to implementation. Fourteen categories of mHealth services were surveyed: health call centres, emergency toll-free telephone services, managing emergencies and disasters, mobile telemedicine, appointment reminders, community mobilization and health promotion, treatment compliance, mobile patient records, information access, patient monitoring, health surveys and data collection, surveillance, health awareness raising, and decision support systems.

**CMBEBIH 2017** Almir Badnjevic, 2017-03-14 This volume presents the proceedings of the International Conference on Medical and Biological Engineering held from 16 to 18 March 2017 in Sarajevo, Bosnia and Herzegovina. Focusing on the theme of 'Pursuing innovation. Shaping the future', it highlights the latest advancements in Biomedical Engineering and also presents the latest findings, innovative solutions and emerging challenges in this field. Topics include: - Biomedical Signal Processing - Biomedical Imaging and Image Processing - Biosensors and Bioinstrumentation - Bio-Micro/Nano Technologies - Biomaterials - Biomechanics, Robotics and Minimally Invasive Surgery - Cardiovascular, Respiratory and Endocrine Systems Engineering - Neural and Rehabilitation Engineering - Molecular, Cellular and Tissue Engineering - Bioinformatics and Computational Biology - Clinical Engineering and Health Technology Assessment - Health Informatics, E-Health and Telemedicine - Biomedical Engineering Education - Pharmaceutical Engineering

MoneyBall Medicine Harry Glorikian, Malorye Allison Branca, 2017-11-20 How can a smartwatch help patients with diabetes manage their disease? Why can't patients find out prices for surgeries and other procedures before they happen? How can researchers

speed up the decade-long process of drug development? How will Precision Medicine impact patient care outside of cancer? What can doctors, hospitals, and health systems do to ensure they are maximizing high-value care? How can healthcare entrepreneurs find success in this data-driven market? A revolution is transforming the \$10 trillion healthcare landscape, promising greater transparency, improved efficiency, and new ways of delivering care. This new landscape presents tremendous opportunity for those who are ready to embrace the data-driven reality. Having the right data and knowing how to use it will be the key to success in the healthcare market in the future. We are already starting to see the impacts in drug development, precision medicine, and how patients with rare diseases are diagnosed and treated. Startups are launched every week to fill an unmet need and address the current problems in the healthcare system. Digital devices and artificial intelligence are helping doctors do their jobs faster and with more accuracy. MoneyBall Medicine: Thriving in the New Data-Driven Healthcare Market, which includes interviews with dozens of healthcare leaders, describes the business challenges and opportunities arising for those working in one of the most vibrant sectors of the world's economy. Doctors, hospital administrators, health information technology directors, and entrepreneurs need to adapt to the changes effecting healthcare today in order to succeed in the new, cost-conscious and value-based environment of the future. The authors map out many of the changes taking place, describe how they are impacting everyone from patients to researchers to insurers, and outline some predictions for the healthcare industry in the years to come.

**Practical Strategies and Tools to Promote Treatment Engagement** William

O'Donohue, Larry James, Cassandra Snipes, 2017-03-08 This practice-building resource examines the psychology behind non-adherence and the importance of building commitment to treatment as the foundation of successful therapy. Coverage starts by illustrating the complex phenomena of non-adherence at different stages of intervention—including mechanisms and situations that may prevent even initial engagement. From there, experts from diverse specialties offer interest-promoting strategies tailored to specific conditions (diabetes, anxiety, depression) and populations (children, dually diagnosed patients), informed by the current knowledge base on treatment effectiveness and recent technological advances. And the editors make patient-centered recommendations for the health and mental health professions to make therapy more accessible and open. Among the topics covered: · Meeting patients where they are: using a stage approach to facilitate engagement. · &nbsp; Use of mindfulness in promoting treatment engagement. · DBT and treatment engagement in the context of highly suicidal complex clients. · Behavioral Problems in children: ADHD and ODD. · Engagement of patients in the self-management of pain. · Engaging trauma survivors in treatment. A breakthrough in the behavioral health delivery services literature, *Practical Strategies and Tools to Promote Treatment Engagement* offers real-world tools, guidelines, and expertise to health psychologists, primary care physicians and nurses, clinical psychologists, and clinical social workers. It is a vivid reminder that patients need not only what's good for them, but also what works for them.

Promoting Safe and Effective Transitions to College for Youth with Mental Health Conditions Adele Martel, Jennifer Derenne, Patricia K. Leebens, 2018-05-23 This concise

and practical book provides an overview of how to safely and effectively transition adolescents with mental health conditions into a college environment. Therapeutic strategies to assess and promote readiness for transition to college are discussed in case-based chapters, which include case history, analysis of transition, clinical pearls, literature review, and helpful resources for clinicians, patients, and families. Filling a significant gap in the literature, *Promoting Safe and Effective Transitions to College for Youth with Mental Health Conditions: A Case-Based Guide to Best Practices* delivers essential information for psychiatrists, psychologists, and other mental health professionals who work with children, adolescents, and their families before, during, and after the transition to college.

**Mobile Health Technologies** Wilfred Bonney, 2016-08-31 Mobile Health Technologies, also known as mHealth technologies, have emerged, amongst healthcare providers, as the ultimate Technologies-of-Choice for the 21st century in delivering not only transformative change in healthcare delivery, but also critical health information to different communities of practice in integrated healthcare information systems. mHealth technologies nurture seamless platforms and pragmatic tools for managing pertinent health information across the continuum of different healthcare providers. mHealth technologies commonly utilize mobile medical devices, monitoring and wireless devices, and/or telemedicine in healthcare delivery and health research. Today, mHealth technologies provide opportunities to record and monitor conditions of patients with chronic diseases such as asthma, Chronic Obstructive Pulmonary Diseases (COPD) and diabetes mellitus. The intent of this book is to enlighten readers about the theories and

applications of mHealth technologies in the healthcare domain.

**Pharmaceutical Care in Digital Revolution** Claudia Rijcken, 2019-03-15

Pharmaceutical Care in Digital Revolution demonstrates how blending human and digital pharmaceutical care can establish optimal Apothecary Intelligence (AI). Organized into four parts, it examines digital health advances that will synergize the pharmaceutical care process and prepares stakeholders for a dynamic future, fueled with innovation. Beginning with the global picture on health care systems, patients' expectations, and current pharmaceutical care practices, the book covers details of relevant digital technologies as well as compliance, ethical, educational, and cultural aspects to take successful steps towards digital pharmaceutical care. The text includes links to lectures and technology facts, tutorials on how to implement advances in your own working environment, and examples of stakeholders who are successful in building synergy between digital and pharma. Pharmaceutical Care in Digital Revolution is a practical resource to equip pharmaceutical care stakeholders, such as pharmacists, physicians, pharmacy technicians, and students as well as those in surrounding ecosystems like payers or regulators. It is a crucial reference to understand how technological innovation is changing the paradigm in which we provide current and future pharmaceutical care and how to keep it accessible, affordable, and sustainable. Learn about advances in digital health technology and apply them as a change leader to create circular pharmaceutical care Provides insights on future pharmaceutical care and implement essential conditions to create the best outlook for patients Access links, QR codes, and explanatory animations as educational material to the book

Proceedings of the Future Technologies Conference (FTC) 2021, Volume 1 Kohei Arai,2021-10-23 This book covers a wide range of important topics including but not limited to Technology Trends, Computing, Artificial Intelligence, Machine Vision, Communication, Security, e-Learning, and Ambient Intelligence and their applications to the real world. The sixth Future Technologies Conference 2021 was organized virtually and received a total of 531 submissions from academic pioneering researchers, scientists, industrial engineers, and students from all over the world.. After a double-blind peer review process, 191 submissions have been selected to be included in these proceedings. One of the meaningful and valuable dimensions of this conference is the way it brings together a large group of technology geniuses in one venue to not only present breakthrough research in future technologies, but also to promote discussions and debate of relevant issues, challenges, opportunities and research findings. We hope that readers find the book interesting, exciting, and inspiring; it provides the state-of-the-art intelligent methods and techniques for solving real-world problems along with a vision of the future research.

**Transition-Age Youth Mental Health Care** Vivien Chan,Jennifer Derenne,2021-03-10 Over the course of the last two decades, improved practices in child and adolescent mental healthcare have led to a decreased environment of stigma, which also led to an increased identification and treatment of mental health disorders in children and youth. Considering that treatment and outcomes are improved with early intervention, this is good news. However, the success gained in the field of child and adolescent psychiatry leads to a new challenge: transitioning from adolescent care to adult care. It

has been known for some time that children, adult, and geriatric patients all have unique needs where it comes to mental healthcare, yet limited work has been done where it comes to the shifting of the lifespan. Where it comes to the child-adult transition—defined as those in their late teens and early/mid-20s—there can be multiple barriers in seeking mental healthcare that stem from age-appropriate developmental approaches as well as include systems of care needs. Apart from increasing childhood intervention, the problem is exacerbated by the changing social dynamics: more youths are attending college rather than diving straight into the workforce, but for various reasons these youths can be more dependent on their parents more than previous generations. Technology has improved the daily lives of many, but it has also created a new layer of complications in the mental health world. The quality and amount of access to care between those with a certain level of privilege and those who do not have this privilege is sharp, creating more complicating factors for people in this age range. Such societal change has unfolded so rapidly that training programs have not had an opportunity to catch up, which has created a crisis for care. Efforts to modernize the approach to this unique age group are still young, and so no resource exists for any clinicians at any phase in their career. This book aims to serve as the first concise guide to fill this gap in the literature. The book will be edited by two leading figures in transition age youth, both of whom are at institutions that have been at the forefront of this clinical work and research. This proposed mid-sized guide is therefore intended to be a collaborative effort, written primarily by child and adolescent psychiatrists, and also with adult psychiatrists. The aim is to discuss the developmental presentation of many common mental health diagnoses and topics in chapters, with each

chapter containing clinically-relevant “bullet points” and/or salient features that receiving providers, who are generally, adult-trained, should keep in mind when continuing mental health treatment from the child and adolescent system. Chapters will cover a wide range of challenges that are unique to transition-age youths, including their unique developmental needs, anxiety, mood, and personality disorders at the interface of this development, trauma and adjustment disorders, special populations, and a wide range of other topics. Each chapter will begin with a clinical pearl about each topic before delving into the specifics.

**Protecting the U.S. Population’s Health Against Potential Economic Recessions and High Unemployment and the Endemic Inflation of Health Care Costs** Fritz Dufour, 2019-12-15 This book has three main parts: (1) the challenges of the U.S. health care system; (2) the impacts of economic recessions and high unemployment on the U.S. population’s health; and (3) recommendations or a look into what might improve the health care system. Part I, through a dissection of the challenges faced by the U.S. health care system, exposes the particularities and the vulnerabilities of the system. It shows the role played by businesses and employment in the U.S. population’s health and describes major challenges of the health care system such as astronomical health care costs, the average family health spending – which is exceedingly high, wasteful spending, death due to inaccessibility to health care, and the hardships that medical costs created for more than half of Americans. Part II is an analysis as to why do economic recessions have health implications. That analysis is done by considering the health implications of economic recessions both at the micro and macroeconomic levels and by considering the

societal costs of uninsurance or inaccessibility to health care due to economic recessions and high unemployment. Part III primarily focuses on what can make the system better, that is more efficient and more cost-effective. Ironically, as Part III argues, there are a myriad of feasible recommendations that are waiting to be fully explored, agreed upon, adopted and implemented nationwide:

- Design labor and fiscal policies aimed at preventing economic recessions and high unemployment
- o Blend labor and fiscal policies into structural reforms
- Create job security and take other steps that guarantee health care security during financial hardship
- Improve health outcomes through nationwide permanent supportive housing to combat chronic homelessness during economic recessions and high unemployment
- Prioritize the use of more cost-effective medical technologies
- o Promote telemedicine to reduce costs and improve accessibility to health care
- Eliminate health disparities thanks to the democratization of health care
- Promote health literacy and the valorization of communities
- Design policies or procedures that 1) promote health care costs reduction and efficiency through affordable insurance coverage and 2) eliminate Wasteful spending:
- o Extend drug coverage and implement cost-effective pricing policies
- o Extend coverage of more medical procedures and implement cost-effective policies

On the other hand, Part III also sells the idea of a thorough and bold revolution in our health care system, which would make health care a right of citizenship. It does so by analyzing the political, social, ethical, and economic aspects of the issue. Furthermore, it argues that the relationship between universal health care and economics justifies the notion of “health care as a right of citizenship.”

**Artificial Intelligence in Health** Fernando Koch, Andrew Koster, Isabelle

Bichindaritz, Pau Herrero, 2019 This book constitutes the refereed post-conference proceedings of the First International Workshop on Artificial Intelligence in Health, AIH 2018, in Stockholm, Sweden, in July 2018. This workshop consolidated the workshops CARE, KRH4C and AI4HC into a single event. The 18 revised full papers included in this volume were carefully selected from the 26 papers accepted for presentation out of 42 initial submissions. The papers present AI technologies with medical applications and are organized in three tracks: agents in healthcare; data science and decision systems in medicine; and knowledge management in healthcare.

*The Internet of Healthy Things* Joseph C. Kvedar, 2015-10-23 This important book clearly explains how new smart devices and Internet-based technologies make it possible for healthcare providers and patients to work together to improve health in ways that are powerful and previously unimaginable--page xi, Foreword.

**The Australian Official Journal of Trademarks ,1906**

Through the Patient's Eyes Margaret Gerteis, Susan Edgman-Levitan, Jennifer Daley, Thomas L. Delbanco, 2002-05-03 Sponsored by the Picker/Commonwealth Program

for Patient-Centered Care In this comprehensive, research-based look at the experiences and needs of patients, the authors explore models of care that can make hospitalization more humane. Through the Patient's Eyes provides insights into why some hospitals are more patient-centered than others; how physicians can become more involved in patient-centered quality efforts; and how patient-centered quality can be integrated into health care policy, standards, and regulations. The authors show how, by bringing the patient's perspective to the design and delivery of health services, providers can improve their ability to meet patient's needs and enhance the quality of care.

**Pervasive Computing Paradigms for Mental Health** Silvia Serino,Aleksandar Matic,Dimitris Giakoumis,Guillaume Lopez,Pietro Cipresso,2016-04-08 This book constitutes the refereed proceedings of the 5th International Conference on Pervasive Computing Paradigms for Mental Health, MindCare 2015, held in Milan, Italy, in September 2015. The 23 full papers and 6 short papers presented were carefully reviewed and selected from 40 submissions. The papers deal with the use of technologies in favor of maintaining and improving mental wellbeing. They focus on building new computing paradigms and on addressing a multitude of challenges in mental healthcare, for example in psychiatric and psychological domains with emphasis on new technologies, such as video and audio technologies and mobile and wearable computing.
