*Transactions on Petri Nets and Other Models of  
Concurrency II* Wil van der Aalst, 2009-03-27 Transactions  
on Petri Nets and Other Models of Concurrency (ToPNoC)  
II These Transactions publish archival papers in the broad  
area of Petri nets and other models of concurrency,  
ranging from theoretical work to tool support and  
industrial applications. ToPNoC issues are published as  
LNCS volumes, and hence are widely distributed and  
indexed. This Journal has its own Editorial Board which  
selects papers based on a rigorous two-stage refereeing  
process. ToPNoC contains: - Revised versions of a selection  
of the best papers from workshops and tutorials at the  
annual Petri net conferences - Special sections/issues  
within particular subareas (similar to those published in  
the Advances in Petri Nets series) - Other papers invited  
for publication in ToPNoC - Papers submitted directly to  
ToPNoC by their authors The second volume of ToPNoC  
focuses on Concurrency in Process-Aware Information  
Systems. Although the topic of business process  
management using information technology has been  
addressed by consultants and software developers in  
depth, more fundamental approaches towards such  
Process-Aware Information Systems (PAISs) have been  
rather uncommon. It wasn't until the 1990s that  
researchers started to work on the foundations of PAISs.  
Clearly, concurrency theory is an essential ingredient in  
these foundations as business processes are highly  
concurrent involving all types of routing logic and resource

allocation mechanisms. The 16 papers in this special issue of ToPNoC cover topics ranging from the formal (mostly Petri-net based) foundations of PAISs to more applied topics such as flexibility and process mining. Thus, this volume gives a good overview of the state of the art in PAIS research.

**Maritime Security: Counter-Terrorism Lessons from Maritime Piracy and Narcotics Interdiction** E.R. Lucas, S. Rivera-Paez, T. Crosbie, 2020-08-04 It can be easy to forget the critical role that maritime transport plays in the global economy, but international maritime transportation is still responsible for around 90% of global trade. Protecting the maritime infrastructure essential for this trade from terrorism is a major concern for the international community. This book originates from the NATO Advanced Research Workshop (ARW) Counter-Terrorism Lessons from Maritime Piracy and Narcotics Interdiction, held in Copenhagen, Denmark, in May 2019. Participants in the three-day workshop included policymakers, senior military officers, and academics from NATO member states, international organizations, and two partner nations: Colombia and Israel. Their extensive discussions focused on methods for protecting critical maritime infrastructure, such as ports, supplies, and personnel, from seaborne terrorist attacks. Presentations and roundtables also addressed the human and social factors that contribute to the defense against terrorism in the maritime domain. The book is divided into three sections: organized crime and narcotrafficking; maritime piracy; and terrorism, and aims to bridge the gaps between these three substantive areas of maritime security research. These have remained largely separate areas of research in the past, with the result that valuable maritime security lessons from counter-piracy and counter-narcotics

operations have not been fully incorporated into counter-terrorism best practice. The book facilitates the transmission of lessons learned from counter-piracy and counter-narcotic operations to formulate recommendations for best practice and technological innovations to manage maritime terrorism, and will be of interest to all those working in the field.

**Software Engineering** Richard F Schmidt, 2013-04-30 Software Engineering: Architecture-driven Software

Development is the first comprehensive guide to the underlying skills embodied in the IEEE's Software Engineering Body of Knowledge (SWEBOK) standard. Standards expert Richard Schmidt explains the traditional software engineering practices recognized for developing projects for government or corporate systems. Software engineering education often lacks standardization, with many institutions focusing on implementation rather than design as it impacts product architecture. Many graduates join the workforce with incomplete skills, leading to software projects that either fail outright or run woefully over budget and behind schedule. Additionally, software engineers need to understand system engineering and architecture—the hardware and peripherals their programs will run on. This issue will only grow in importance as more programs leverage parallel computing, requiring an understanding of the parallel capabilities of processors and hardware. This book gives both software developers and system engineers key insights into how their skillsets support and complement each other. With a focus on these key knowledge areas, Software Engineering offers a set of best practices that can be applied to any industry or domain involved in developing software products. A thorough, integrated compilation on the engineering of software products, addressing the majority of the standard knowledge areas and topics Offers best practices focused on those key skills common to many industries and domains that develop software Learn how software engineering relates to systems engineering for better communication with other engineering professionals within a project environment
