Emerge! Elza S. Maalouf, 2014-10 In the Middle East, turmoil has spread quickly. Oppression, inequality, and violence have been keyed in to the very makeup of its society. But what causes a culture to emerge and prosper or stagnate and fail? How can the people take charge of their own inalienable rights to growth, freedom, and life—to keep from backsliding into the grasp of old, unhealthy ideologies and meet their need for ascendance? In Elza Maalouf's groundbreaking new book *Emerge! The Rise of Functional Democracy in the Middle East*, we are introduced to a new paradigm for governance based on Clare Graves' theory of Spiral Dynamics. Maalouf, the founder of the Center for Human Emergence and the Build Palestine Initiative, is an expert on the application of Spiral Dynamics in the Middle East. By placing democracy in an evolutionary, values-system context that is specific to unique, Middle Eastern characteristics, *Emerge* pioneers the foundations for necessary change. Where the West's approach to conflict resolution has failed due to lack of memetic understanding, Maalouf's framework for decoding the complexities of the Middle East succeeds. By weaving together the threads that make up the pattern of each culture, *Emerge* shows the crucial role memes play in creating a system of governance that truly fits. Not only does *Emerge* ask us to seek understanding before we structure and create, it shows us the necessity of teaching our youth to build their own sustainable, indigenous constructs.

Music in Evolution and Evolution in Music Steven Jan, 2022-12-06 *Music in Evolution and Evolution in Music* by Steven Jan is a comprehensive account of the relationships between evolutionary theory and music. Examining the 'evolutionary algorithm' that drives

biological and musical-cultural evolution, the book provides a distinctive commentary on how musicality and music can shed light on our understanding of Darwin's famous theory, and vice-versa. Comprised of seven chapters, with several musical examples, figures and definitions of terms, this original and accessible book is a valuable resource for anyone interested in the relationships between music and evolutionary thought. Jan guides the reader through key evolutionary ideas and the development of human musicality, before exploring cultural evolution, evolutionary ideas in musical scholarship, animal vocalisations, music generated through technology, and the nature of consciousness as an evolutionary phenomenon. A unique examination of how evolutionary thought intersects with music, *Music in Evolution and Evolution in Music* is essential to our understanding of how and why music arose in our species and why it is such a significant presence in our lives.

The Roots of Literature Walter A. Koch, 1993

Technovedanta Antonin Tuynman, 2016-09-09 Will the internet one day awaken as a conscious entity? Or do we need to design a structured architecture in order to impart the quality of consciousness to the web? In the present book *Technovedanta* an architecture for the internet as AwwwareNet is proposed based on stratifications derived from the Indian philosophy of Vedanta to create a functional mimic of consciousness, quasi-consciousness. The deep exploration in Nature's fundamental primacy of consciousness led me to the hypothesis of a panpsychic theory of everything. Welcome to a journey into the unfathomable realm of fantasy, the chaotic soup from which successful strategies are searched, pruned and concretised to fulfil the cosmo-semiotic imperative of ever increasing complexity and meta-variegation. Welcome to

this book of books, a modern clavicula to engender the eschatological apotheosis of Vedantic Singularity. Welcome to the unusual marriage between Technology and Vedanta.

Ultrahuman Steve Madison, *The Ultrahuman is coming*. The Ultrahuman is a member of a higher community. The Ultrahuman is our destiny. The Ultrahuman is the ordinary human's designated replacement. Everything is about to change. The greatest and final paradigm shift is coming. The Ultrahuman is the being associated with this final phase, when humanity starts to understand its own divinity. The medieval eschatologist Joachim of Fiore spoke of three great Ages: 1) The Age of the Father (the Old Testament). 2) The Age of the Son (the New Testament). 3) The Age of the Holy Spirit (the Highest Testament). In this final phase, the Noosphere will merge with the Omega Point. The Ultrahuman is the being for the Third and Final Age. Are you ready to fulfill your destiny? It's time to take the next step. It's time to become Ultrahuman.

Memory Practices and Learning Åsa Mäkitalo, Per Linell, Roger Säljö, 2017-01-01 Memory and learning are seen as mental phenomena and generally studied as brain processes, for example, within various branches of psychology and neuroscience. This book represents a rather different tack, based on sociocultural theory, cultural psychology and dialogism. Authors from many different disciplines and countries study memory and learning as practices adopted by people in different interactional and institutional contexts. Studies range from detailed analyses of situated activities to broad sociohistorical studies of cultural phenomena and collective memories such as national narratives and physical symbols for commemorating events and traditions. By focusing on how people engage in remembering and learning, this book provides a necessary complement to

currently popular neuroscientific approaches.

A New History of the Future in 100 Objects Adrian Hon, 2020-10-06 Imagining the history of the twenty-first

century through its artifacts, from silent messaging systems to artificial worlds on asteroids. In the year 2082, a curator looks back at the twenty-first century, offering a history of the era through a series of objects and artifacts. He reminisces about the power of connectivity, which was reinforced by such technologies as silent messaging—wearable computers that relay subvocal communication; recalls the Fourth Great Awakening, when a regimen of pills could make someone virtuous; and notes disapprovingly the use of locked interrogation, which delivers “enhanced interrogation” simulations via virtual reality. The unnamed curator quotes from a self-help guide to making friends with “posthumans,” describes the establishment of artificial worlds on asteroids, and recounts pro-democracy movements in epistocratic states. In *A New History of the Future in 100 Objects*, Adrian Hon constructs a possible future by imagining the things it might leave in its wake. Many of these things are just an update or two away: improved ankle monitors, for example, and deliverbots. Others may be the logical conclusions of current trends—“downvote” networks that identify and erase undesirables, and Glyphish, an emoticon-based language that supersedes the written word. More benign are Braid Collective, which provides financial support for artists, and Rechartered Cities, which invites immigrants to revitalize urban areas hollowed out by changing demographics. With this engaging and ingenious work, Hon leads the way into an imagined future while offering readers a new perspective on the present.

The Philosophy of Information Quality Luciano Floridi, Phyllis Illari, 2014-08-01 This work fulfills the need for a conceptual and technical framework to improve understanding of Information Quality (IQ) and Information Quality standards. The meaning and practical

implementation of IQ are addressed, as it is relevant to any field where there is a need to handle data and issues such as accessibility, accuracy, completeness, currency, integrity, reliability, timeliness, usability, the role of metrics and so forth are all a part of Information Quality. In order to support the cross-fertilization of theory and practice, the latest research is presented in this book. The perspectives of experts from beyond the origins of IQ in computer science are included: library and information science practitioners and academics, philosophers of information, of engineering and technology, and of science are all contributors to this volume. The chapters in this volume are based on the work of a collaborative research project involving the Arts and Humanities Research Council and Google and led by Professor Luciano Floridi, University of Oxford. This work will be of interest to anyone handling data, including those from commercial, public, governmental and academic organizations. The expert editors' contributions introduce issues of interest to scientists, database curators and philosophers, even though the issues may be disguised in the language and examples common to a different discipline.

The Social Organism Oliver Luckett, Michael Casey, 2016-11-15 A must-read for business leaders and anyone who wants to understand all the implications of a social world. -- Bob Iger, Chairman and Chief Executive Officer of The Walt Disney Company From tech visionaries Oliver Luckett and Michael J. Casey, a groundbreaking, must-read theory of social media -- how it works, how it's changing human life, and how we can master it for good and for profit. In barely a decade, social media has positioned itself at the center of twenty-first century life. The combined power of platforms like Facebook, Twitter, Instagram, Snapchat, and Vine have helped topple

dictators and turned anonymous teenagers into celebrities overnight. In the social media age, ideas spread and morph through shared hashtags, photos, and videos, and the most compelling and emotive ones can transform public opinion in mere days and weeks, even attitudes and priorities that had persisted for decades. How did this happen? The scope and pace of these changes have left traditional businesses - - and their old-guard marketing gatekeepers -- bewildered. We simply do not comprehend social media's form, function, and possibilities. It's time we did. In *The Social Organism*, Luckett and Casey offer a revolutionary theory: social networks -- to an astonishing degree--mimic the rules and functions of biological life. In sharing and replicating packets of information known as memes, the world's social media users are facilitating an evolutionary process just like the transfer of genetic information in living things. Memes are the basic building blocks of our culture, our social DNA. To master social media -- and to make online content that impacts the world -- you must start with the Social Organism. With the scope and ambition of *The Second Machine Age* and James Gleick's *The Information*, *The Social Organism* is an indispensable guide for business leaders, marketing professionals, and anyone serious about understanding our digital world -- a guide not just to social media, but to human life today and where it is headed next.

Memes of Translation Andrew Chesterman,2016-02-25

This revised edition of *Memes of Translation* includes updates that relate the book's themes to more recent research in Translation Studies. The book contributes to the debate about whether it is worth seeking a coherent

theory of translation, by proposing an approach based on norms, strategies and values, which are all seen as kinds of memes, i.e. ideas that spread. The meme metaphor allows us to see translation in the context of cultural evolution, and also highlights similarities with the philosopher Karl Popper's analysis of another kind of evolution: that of scientific knowledge. A translation is, after all, itself a theory – a theory about the source text. And as Popper stressed, theories of all kinds are like nets we make in order to catch something of reality: never perfectly, but always in the hope of better understanding.
