Theology and Human Flourishing Mike Higton,Christopher Rowland,Jeremy Law,2011-11-04 This collection of essays is a celebration of the work of Timothy Gorringer. Like his theology, it is animated by a delighted and critical engagement with the diverse facets of human social life, and by a passionate concern to wrestle with the Bible and the Christian tradition in pursuit of human flourishing. The built environment, politics, education, art: these essays by leading Christian theologians ask what it means for Christian theology to concern itself with, to immerse itself in, and to risk critical commentary on, each of these and more. The collection follows the same rhythm that animates Gorringer's work: insistent attention to the Christian tradition in the light of the particular contexts where human flourishing is imagined, fought for, embodied and betrayed; and a critical, constructive and celebratory examination of those contexts in the light of the Christian tradition. The contributions are very diverse, touching on everything from city life to human curiosity, poverty to genocide--but they are united by a passion to make theological sense of human flourishing.

Data-Intensive Text Processing with MapReduce Jimmy Lin,Chris Dyer,2022-05-31 Our world is being revolutionized by data-driven methods: access to large amounts of data has generated new insights and opened exciting new opportunities in commerce, science, and computing applications. Processing the enormous quantities of data necessary for these advances requires large clusters, making distributed computing paradigms more crucial than ever. MapReduce is a programming model for expressing distributed computations on massive datasets and an execution framework for large-scale data processing on clusters of commodity servers. The programming model provides an easy-to-understand abstraction for designing scalable algorithms, while the execution framework transparently handles many system-level details, ranging from scheduling to synchronization to fault tolerance. This book focuses on MapReduce algorithm design, with an emphasis on text processing algorithms common in natural language processing, information retrieval, and machine learning. We introduce the notion of MapReduce design patterns, which represent general reusable solutions to commonly occurring problems across a variety of problem domains. This book not only intends to help the reader think in MapReduce, but also discusses limitations of the programming model as well. Table of Contents: Introduction / MapReduce Basics / MapReduce Algorithm Design / Inverted Indexing for Text Retrieval / Graph Algorithms / EM Algorithms for Text Processing / Closing Remarks
