Transcription Factors CREB and NF-κB: Involvement in Synaptic Plasticity and Memory Formation Benedict C. Albensi,2012 The main theme of this book is to critically survey the role of two recognized protein molecules (i.e., transcription factors) in processes of human memory. In addition, authors provided recent data from their own labs and provided a perspective relevant to specific neurological diseases and potential drug targets. Historically, the transcription factor cAMP response element-binding (CREB) has been the most well documented transcription factor shown to play a role in memory. CREB has several functions, but its most notable function has to do with the formation of long-term memories. More recen.

Cybercartography in a Reconciliation Community Stephanie Pyne,D. R. Fraser Taylor,2019-10-04 Cybercartography in a Reconciliation Community: Engaging Intersecting Perspectives, Volume Eight gathers perspectives on issues related to reconciliation—primarily in a residential / boarding school context—and demonstrates the unifying power of Cybercartography by identifying intersections among different knowledge perspectives. Concerned with understanding approaches toward reconciliation and education, preference is given to reflexivity in research and knowledge dissemination. The positionality aspect of reflexivity is reflected in the chapter contributions concerning various aspects of cybercartographic atlas design and development research, and related activities. In this regard, the book offers theoretical and practical knowledge of collaborative transdisciplinary research through its reflexive assessment of the relationships, processes and knowledge involved in cybercartographic research. Using, most specifically, the Residential Schools Land Memory Mapping Project for context, Cybercartography in a Reconciliation Community provides a high speed tour through the project's innovative collaborative approach to mapping institutional material and volunteered geographic information. Exploring Cybercartography through the lens of this atlas project provides for a comprehensive understanding of both Cybercartography and transdisciplinary research, while informing the reader of education and reconciliation initiatives in Canada, the U.S., the U.K. and Italy. Includes a variety of examples of reconciliation work, especially related to residential / boarding schools, and examines common themes in the issues discussed Offers both conceptual and applied dimensions, and provides a good example of a reflexive approach to both research and knowledge dissemination Addresses a modern application for Cybercartography that is of considerable societal importance Provides historiographical accounts of atlas-making processes, multidisciplinary perspectives on research issues and conceptual explorations

"Gloriously twisting . . . a heady campfire tale of a novel."—The New York Times Book Review NAMED ONE OF THE BEST BOOKS OF THE YEAR BY Time • NPR • BookRiot Reality is broken. At first, it looks like a disease. An epidemic that spreads through no known means, driving its victims mad with memories of a life they never lived. In New York City, Detective Barry Sutton is closing in on the truth—and in a remote laboratory, neuroscientist Helena Smith is unaware that she alone holds the key to this mystery . . . and the tools for fighting back. Together, Barry and Helena will have to confront their enemy—before they, and the world, are trapped in a loop of ever-growing chaos. Heterogeneous System Architecture Wen-mei W. Hwu,2015-11-20 Heterogeneous Systems Architecture - a new compute platform infrastructure presents a next-generation hardware platform, and associated software, that allows processors of different types to work efficiently and cooperatively in shared memory from a single source program. HSA also defines a virtual ISA for parallel routines or kernels, which is vendor and ISA independent thus enabling single source programs to execute across any HSA compliant heterogeneous processer from those used in smartphones to supercomputers. The book begins with an overview of the evolution of heterogeneous parallel processing, associated problems, and how they are overcome with HSA. Later chapters provide a deeper perspective on topics such as the runtime, memory model, queuing, context switching, the architected queuing language, simulators, and tool chains. Finally, three real world examples are presented, which provide an early

demonstration of how HSA can deliver significantly higher performance thru C++ based applications. Contributing authors are HSA Foundation members who are experts from both academia and industry. Some of these distinguished authors are listed here in alphabetical order: Yeh-Ching Chung, Benedict R. Gaster, Juan Gómez-Luna, Derek Hower, Lee Howes, Shih-Hao HungThomas B. Jablin, David Kaeli,Phil Rogers, Ben Sander, I-Jui (Ray) Sung. Provides clear and concise explanations of key HSA concepts and fundamentals by expert HSA Specification contributors Explains how performance-bound programming algorithms and application types can be significantly optimized by utilizing HSA hardware and software features Presents HSA simply, clearly, and concisely without reading the detailed HSA Specification documents Demonstrates ideal mapping of processing resources from CPUs to many other heterogeneous processors that comply with HSA Specifications

Digital Forensic Investigation of Internet of Things (IoT) Devices Reza Montasari,Hamid Jahankhani,Richard Hill,Simon Parkinson,2020-12-09 This book provides a valuable reference for digital forensics practitioners and cyber security experts operating in various fields of law enforcement, incident response and commerce. It is also aimed at researchers seeking to obtain a more profound knowledge of Digital Forensics and Cybercrime. Furthermore, the book is an exceptional advanced text for PhD and Master degree programmes in Digital Forensics and Cyber Security. Each chapter of this book is written by an internationally-renowned expert who has extensive experience in law enforcement, industry and academia. The increasing popularity in the use of IoT devices for criminal activities means that there is a maturing discipline and industry around IoT forensics. As technology becomes cheaper and easier to deploy in an increased number of discrete, everyday objects, scope for the automated creation of personalised digital footprints becomes greater. Devices which are presently included within the Internet of Things (IoT) umbrella have a massive potential to enable and shape the way that humans interact and achieve objectives. These also forge a trail of data that can be used to triangulate and identify individuals and their actions. As such, interest and developments in autonomous vehicles, unmanned drones and 'smart' home appliances are creating unprecedented opportunities for the research communities to investigate the production and evaluation of evidence through the discipline of digital forensics.
