My Memory Minder Is My Memory Finder Wendy Ann Marquenie, 2021-10-30 Memory Minder is a very lovable grandmother figure. She favours green because it is a calming colour. Like a librarian, she stores everyone's memories, from the day they were born until the day they leave this earth. She guides children on how to think in alignment with happy thoughts, tapping into helpful memories and teaching everyone how these experiences can have a positive impact. Memory Minder is never happier than when she is holding up a future memory and seeing all of the wonderful things children can create for themselves as they grow. Genius and his friends live in a place called MindWorld, which is a community in your mind. It is a very special place, created by you. Your thoughts are unique and special, so enjoy each character as they take you on a journey of your feelings, emotions and critical thinking skills through MindWorld. Wendy is a powerful educator whose Genius series is a must have in every classroom. Wendy's foresight in education, and her wish to inspire young minds, is remarkable. In this book of the series, she beams in on 'memory'-a fundamental ideal which helps children comprehend the beauty and intricacies of the mind. Each student who engages with the Genius series-through reading, writing and exercises from the accompanying curriculum map-will be transported into a world where they will learn about the power of thoughts and how to manifest a world full of opportunities. As a teacher, I am honoured to be part of Wendy's journey, and I can see this series taking flight in many different countries across the globe. Pashmina P.-M.Ed, International Bestselling Author, CEO and Founder, The Online Author's Office, and featured in New York Weekly.

Thinking About Human Memory Michael S. Humphreys, Kerry A. Chalmers, 2016-03-11 Thinking About Human Memory provides a novel analytical approach to understanding memory that considers the goals of the memory task, the cues and information available, the opportunity to learn, and interference from irrelevant information (noise). Each of the five chapters describing this approach introduces historical ideas and demonstrates how current thinking both differs from and is derived from them. These chapters also contain analyses of current problems designed to demonstrate the power of the approach. In a subsequent chapter, the authors discuss how memory is controlled by the environment, by others, and by ourselves, and then apply their insights to the problem solving of children, our hominin ancestors, and scrub jays. Finally, the questions of how to define episodic memory and how to investigate phylogenetic and developmental changes in memory are addressed. This book will appeal to memory researchers, including applied researchers, and advanced students.

Do You Look Like Your Dog? the Book Gerrard Gethings, 2020-10-12 Why DO people look like their dogs? Is it shared personality traits, an expression of self-love, or do they grow together over time like old married couples? This book explores the intense bonds we develop with our dogs, which are far from only skin, or even fur, deep. 50 photos by renowned animal photographer Gerrard Gethings present insightful and fun depictions of dogs and their humans, and humorous texts are included in the booklet to provide clues about these 25 people and their furry best friends. The book also includes behind the scenes photos and an interview with the photographer.

Computer Architecture Joseph D. Dumas II,2016-11-25 Not only does almost everyone in the civilized world use a personal computer, smartphone, and/or tablet on a daily basis to communicate with others and access information, but virtually every other modern appliance, vehicle, or other device has one or more computers embedded inside it. One cannot purchase a current-model automobile, for example, without several computers on board to do everything from monitoring exhaust emissions, to operating the anti-lock brakes, to telling the transmission when to shift, and so on. Appliances such as clothes washers and dryers, microwave ovens, refrigerators, etc. are almost all digitally controlled. Gaming consoles like Xbox, PlayStation, and Wii are powerful computer systems with enhanced capabilities for user interaction. Computers are everywhere, even when we don't see them as such, and it is more important than ever for students who will soon enter the workforce to understand how they work. This book is completely updated and revised for a one-semester upper level undergraduate course in Computer Architecture, and suitable for use in an undergraduate CS, EE, or CE curriculum at the junior or senior level. Students should have had a course(s) covering introductory topics in digital logic and computer organization. While this is not a text for a programming course, the reader should be familiar with computer programming concepts in at least one language such as C, C++, or Java. Previous courses in operating systems, assembly language, and/or systems programming would be helpful, but are not essential.
