device on the block. It's the cell phone—nay, personal digital everything—that all the cool kids want to get their hands on...but no one wants to use it more than developers! You'll spend most of your time looking at Mojo, the framework API through which your code interfaces with the operating system. All of this will be presented within the context of six fully functional real-world applications that you can use on your own Pre! Once you're done, you'll be ready to write your own webOS applications for the Pre, get them into the app catalog (the online store where Pre applications are made available to Pre owners), and make tons of cash.
