Science in the Met Office Great Britain: Parliament: House of Commons: Science and Technology Committee,2012-02-21 The Met Office currently operates as a Trading Fund within the Department of Business, Innovation and Skills (BIS). The Committee welcomes the move to BIS, particularly given the potential for closer links with the research base and the opportunity to develop further its commercial activities. Core services though for the public service must be maintained. The Met Office generates a significant proportion of its revenues from Government contracts and Customer Service Agreements, in addition to its' commercial services and the

Government should provide clearly defined funding commitments. This would allow the Met Office to take a longer-term perspective on scientific and operational development. The Government has no plans to privatise the Met Office, which the Committee saw as putting at risk the strong partnerships built with international partners and the sharing of crucial meteorological data. Also the Committee welcomes the Government's initiative of Public Data Corporation. Some concern though is expressed that scientific advances in weather forecasting and the associated public benefits (particularly in regard to severe weather warnings) are available but are being held back by insufficient supercomputing capacity. The Met Office should attempt to streamline the scrutiny of science under one committee and develop a strong customer relationship with key government departments.

History of the Meteorological Office Malcolm Walker,2011-11-14 Malcolm Walker tells the story of the UK's national meteorological service from its formation in 1854 with a staff of four to its present position as a scientific and technological institution of national and international importance with a staff of nearly two thousand. The Met Office has long been at the forefront of research into atmospheric science and technology and is second to none in providing weather services to the general public and a wide range of customers around the world. The history of the Met Office is therefore largely a history of the development of international weather prediction research in general. In the modern era it is also at the forefront of the modelling of climate change. This volume will be of great interest to meteorologists, atmospheric scientists and historians of science, as well as amateur meteorologists and anyone interested generally in weather prediction.

Meteorological Glossary R. P. W. Lewis, Great Britain. Meteorological Office,1991 In the 20 years since the last edition of the Meteorological Glossary was published, many new terms and definitions have been introduced as a result of research and developments in meteorology, climatology, hydrology and from increasing research into the greenhouse effect and global warming. The new edition of this handbook defines most of the terms a meteorologist might come across. Where required, it gives the physical or mathematical theory behind the terms, and it also includes most of the official definitions used by the World Meteorological Organization.

Unmatched David Barkai, 2023-10-16 *Unmatched: 50 Years of Supercomputing: A Personal Journey Accompanying the Evolution of a Powerful Tool* The rapid and extraordinary progress of supercomputing over the past half-century is a powerful demonstration of our relentless drive to understand and shape the world around us. In this book, David Barkai offers a unique and compelling account of this remarkable technological journey, drawing from his own rich experiences working at the forefront of high-performance computing (HPC). This book is a journey delineated as five decade-long 'epochs' defined by the systems' architectural themes: vector processors, multi-processors, microprocessors, clusters, and accelerators and cloud computing. The final part examines key issues of HPC and discusses where it might be headed. A central goal of this book is to show how computing power has been applied, and, more importantly, how it has impacted and benefitted society. To this end, the use of HPC is illustrated in a range of industries and applications, from weather and climate modeling to engineering and life sciences. As such, this book appeals to both students and general readers with an interest in HPC, as well as industry professionals looking to revolutionize their practice.

An Introduction to the Meteorology and Climate of the Tropics J. F. P. Galvin,2015-12-21 What do we mean by the tropics? The weather and the climates it produces across the tropical zone are significantly different from those experienced by the people living in higher latitudes, so forecasters across Europe and much of North America are unfamiliar with its effects. In this book, Jim Galvin demystifies the topic in this zone that is increasingly of interest to those studying weather and climate. This book was written for weather forecasters, meteorology, environmental science and geography students as an introductory guide. It builds on the experience of the author, his professional experience in the World Area Forecast Centre at the Met Office, Exeter, using studies into the weather and climate seen within the tropical air mass conducted over many years. Its unique approach presents a practical approach to tropical weather studies, drawing on both academic and practical knowledge, covering air mass dynamics, seasonal changes, moist and dry weather, climate variability and human health in chapters and appendices that build up the overall picture, summarising our current state of knowledge. As an overview, it covers the broad range of effects connected with climate and weather in a straightforward way and is clearly illustrated throughout.

Scientific advice and evidence in emergencies Great Britain: Parliament: House of Commons: Science and Technology Committee, Andrew Miller, 2011-03-02 In this report, the Science and Technology Committee examines how scientific advice and evidence is used in national emergencies, when the Government and scientific advisory system are put under great pressure to deal with atypical situations. The inquiry focused on four case studies: (i) the 2009-10 H1N1 influenza pandemic (swine flu); (ii) the April 2010 volcanic ash disruption; (iii) space weather; and (iv) cyber attacks. While science is used effectively to aid responses to emergencies, the detachment of the Government Chief Scientific Adviser (GCSA) from the National Risk Assessment (NRA) - the key process of risk evaluation carried out by the Cabinet Office - is a serious concern. The Committee recommends that the NRA should not be signed off until the GCSA is satisfied that all risks requiring scientific input and judgements have been properly considered. A new independent scientific advisory committee should be set up to advise the Cabinet on risk assessment and review the NRA. The Icelandic volcanic eruption in April 2010 is a stark example of the lack of scientific input in risk assessment: the risk of disruption to aviation caused by a natural disaster was dropped from the assessment process in 2009, despite warnings from earth scientists. There are concerns over how risk was communicated to the public during the 2009-10 swine flu pandemic are raised in the report, with sensationalised media reporting about the projected deaths from swine flu. The Scientific Advisory Groups in Emergencies, set up to advise government during emergencies, were found to work in an unnecessarily secretive way.
