The Sling and the Stone Thomas X. Hammes,2006-02-17 4GW (Fourth Generation Warfare) is the only kind of war America has ever lost. And we have done so three times – in Vietnam, Lebanon, and Somalia. This form of warfare has also defeated the French in Vietnam and Algeria, and the USSR in Afghanistan...As the only Goliath left in the world, we should be worried that the world's Davids have found a sling and stone that work. – Chapter 1, *The Sling and the Stone: On War in the 21st Century*. The War in Iraq. The War on Terror. These types of asymmetrical warfare are the conflicts of the 21st century – and show how difficult it is for the world's remaining superpower to battle insurgents and terrorists who will fight unconventionally in the face of superior military power. This change in military conflict may seem sudden.

Auditorium Acoustics and Architectural Design Michael Barron,2009-09-28 Modern concert halls and opera houses are now very specialized buildings with special acoustical characteristics. With new contemporary case-studies, this updated book explores these characteristics as an important resource for architects, engineers and auditorium technicians. Supported by over 40 detailed case studies and architectural drawings of 75 auditoria at a scale of 1:500, the survey of each auditorium type is completed with a discussion of current best practice to achieve optimum acoustics.

Dictionary of Pharmaceutical Medicine Gerhard Nahler,2013-06-29 This dictionary is aimed primarily at the beginners entering the new discipline of Pharmaceutical Medicine, an area comprising aspects of toxicology, pharmacology, pharmaceuticals, epidemiology, statistics, drug regulatory and legal

affairs, medicine and marketing. But also more experienced colleagues in departments engaged in clinical development as well as researchers and marketing experts in the pharmaceutical industry will find concise and up-to-date information. The book is completed by a list of about 1000 abbreviations encountered in pharmaceutical medicine and a compilation of important addresses of national and international health authorities.

The Machine as Art/ The Machine as Artist Juliette Bessette, Frederic Fol Leymarie, G. W. Smith, 2020-10-21 The articles collected in this volume from the two companion Arts Special Issues, *The Machine as Art (in the 20th Century)* and *The Machine as Artist (in the 21st Century)*, represent a unique scholarly resource: analyses by artists, scientists, and engineers, as well as art historians, covering not only the current (and astounding) rapprochement between art and technology but also the vital post-World War II period that has led up to it; this collection is also distinguished by several of the contributors being prominent individuals within their own fields, or as artists who have actually participated in the still unfolding events with which it is concerned

Epistemology, Methodology, and the Social Sciences Robert S. Cohen, Marx W. Wartofsky, 1983-02-28 The last decades have seen major reformations in the philosophy and history of science. What has been called 'post-positivist' philosophy of science has introduced radically new concerns with historical, social, and valuative components of scientific thought in the natural sciences, and has raised up the demons of relativism, subjectivism and sociologism to haunt the once calm precincts of objectivity and realism. Though these disturbances intruded upon what had seemed to be the logically well-ordered domain of the philosophy of the natural sciences, they were no news to the social sciences. There, the messy business of human action, volition, decision, the considerations of practical purposes and social values, the role of ideology and the problem of rationality, had long conspired to defeat logical-reconstructionist programs. The attempt to tame the social sciences to the harness of a strict hypothetico deductive model of explanation failed. Within the social sciences, phenomenological, Marxist, hermeneuticist, action-theoretical approaches vied in attempting to capture the distinctiveness of human phenomena. In fact, the philosophy of the natural sciences, even in its 'hard' forms, has itself become infected with the increasing reflection upon the role of such social-scientific categories, in the attempt to understand the nature of the scientific enterprise.

Riots, Pogroms, Jihad John T. Sidel, 2018-07-05 In October 2002 a bomb blast in a Balinese nightclub killed more than two hundred people, many of them young Australian tourists. This event and subsequent attacks on foreign targets in Bali and Jakarta in 2003, 2004, and 2005 brought Indonesia into

the global media spotlight as a site of Islamist terrorist violence. Yet the complexities of political and religious struggles in Indonesia, the most populous Muslim country in the world, remain little known and poorly understood in the West. In *Riots, Pogroms, Jihad*, John T. Sidel situates these terrorist bombings and other jihadist activities in Indonesia against the backdrop of earlier episodes of religious violence in the country, including religious riots in provincial towns and cities in 1995-1997, the May 1998 riots in Jakarta, and interreligious pogroms in 1999-2001. Sidel's close account of these episodes of religious violence in Indonesia draws on a wide range of documentary, ethnographic, and journalistic materials. Sidel chronicles these episodes of violence and explains the overall pattern of change in religious violence over a ten-year period in terms of the broader discursive, political, and sociological contexts in which they unfolded. Successive shifts in the incidence of violence-its forms, locations, targets, perpetrators, mobilizational processes, and outcomes-correspond, Sidel suggests, to related shifts in the very structures of religious authority and identity in Indonesia during this period. He interprets the most recent jihadist violence as a reflection of the post-1998 decline of Islam as a banner for unifying and mobilizing Muslims in Indonesian politics and society. Sidel concludes this book by reflecting on the broader implications of the pattern observed in Indonesia both for understanding Islamic terrorism in particular and for analyzing religious violence in all its varieties.

Fundamentals of Piano Practice Chuan C. Chang, 2016-01-06 This is the first book that teaches piano practice methods systematically, based on my lifetime of research, and containing the teachings of Combe, material from over 50 pianobooks, hundreds of articles, and decades of internet research and discussions with teachers and pianists. Genius skills are identified and shown to be teachable; learning piano can raise or lower your IQ. Past widely taught methods based on false assumptions are exposed; substituting them with efficient practice methods allows students to learn piano and obtain the necessary education to navigate in today's world and even have a second career. Choosing and Using a Refracting Telescope Neil English,2010-09-28 Choosing and Using a Refracting Telescope has been written for the many amateur astronomers who already own, or are intending to purchase, a refracting telescope – perhaps to complement their existing arsenal of larger reflecting telescopes – or for the specialist who requires a particular refractor for serious astronomical applications or nature studies. Four hundred year ago, during the winter of 1609, a relatively unknown Italian scientist, Galileo Galilei designed a spyglass with two crude lenses and turned it skyward. Since then, refractors have retained their dominance over all types of reflector in studies of the Moon, planets and double stars because of the precision of their optics and lack of a central obstruction in the optical path, which causes diffraction effects in all commercially-made reflectors. Most mature amateur astronomers got started with a 60mm refractor, or something similar. Thirty years ago, there was little choice available to the hobbyist, but in the last decade long focus crown-flint achromats have moved aside for some exquisitely crafted apochromatic designs offered by leading commercial manufacturers. There has been a huge increase in the popularity of these telescopes in the last few years, led by a significant increase in the number of companies (particularly, William Optics, Orion USA, StellarVue, SkyWatcher and AstroTech) who are now heavily marketing refractors in the amateur astronomical magazines. In *Choosing and Using a Refracting Telescope*, well-known observer and astronomy writer Neil English celebrates the remarkable history and evolution of the refracting telescope and looks in detail at the instruments, their development and their use. A major feature of this book is the way it compares not only different classes of refractor, but also telescopes of each class that are sold by various commercial manufacturers. The author is perhaps uniquely placed to do this, having used and tested literally hundreds of different refracting telescopes over three decades. Because it includes many diverse subjects such as imaging with consumer-level digital cameras, imaging with webcams, and imaging with astronomical CCD cameras – that are not covered together in equal depth in any other single volume – *Choosing and Using a Refracting Telescope* could become the ‘refractor bible’ for amateur astronomers at all levels, especially those who are interested in imaging astronomical objects of every class.
