This two-volume encyclopedia provides accessibly written coverage on a wide range of topics, covering substances ranging from whiskey to peyote as well as related topics such as Mexican drug trafficking and societal effects caused by specific drugs. The entries also supply an excellent overview of the history of temperance movements in Canada and the United States; trends in alcohol consumption, its production, and its role in the economy; as well as alcohol's and drugs' roles in shaping national discourse, the creation of organizations for treatment and study, and legal responses. This resource includes primary documents and a bibliography offering important books, articles, and Internet sources related to the topic.

**Brewing a Boycott** Allyson P. Brantley, 2021-04-06 In the late twentieth century, nothing united union members, progressive students, Black and Chicano activists, Native Americans, feminists, and members of the LGBTQ+ community quite as well as Coors beer. They came together not in praise of the ice cold beverage but rather to fight a common enemy: the Colorado-based Coors Brewing Company. Wielding the consumer boycott as their weapon of choice, activists targeted Coors for allegations of antiunionism, discrimination, and conservative political ties. Over decades of organizing and coalition-building from the 1950s to the 1990s, anti-Coors activists molded the boycott into a powerful means of political protest. In this first narrative history of one of the longest boycott campaigns in U.S. history, Allyson P. Brantley draws from a broad archive as well as oral history interviews with long-time boycotters to offer a compelling, grassroots view of anti-corporate organizing and the unlikely coalitions that formed in opposition to the iconic Rocky Mountain brew. The story highlights the vibrancy of activism in the final decades of the twentieth century and the enduring legacy of that organizing for communities, consumer activists, and corporations today.

**The Death of an Heir** Philip Jett, 2017-09-26 In the 1950s and 60s, the Coors dynasty reigned over Golden, Colorado, seemingly invincible. When rumblings about labor unions threatened to destabilize the family's brewery, Adolph Coors, Jr., the septuagenarian president of the company, drew a hard line, refusing to budge. They had worked hard for what they had, and no one had a right to take it from them. What they'd soon realize was that they had more to lose than they could have imagined. What happened next set off the largest U.S. manhunt since the Lindbergh kidnapping. State and local authorities, along with the FBI personally spearheaded by its director J. Edgar Hoover, burst into action attempting to locate Ad and his kidnapper. The dragnet spanned a continent. All the while, Ad's grief-stricken wife and children waited, tormented by the unrelenting silence. The Death of an Heir reveals the true story behind the tragic murder of Colorado's favorite son.

*Corporate Water Strategies* William Sarni, 2012-05-23 In the past businesses have viewed water as a minimal operational cost and not a strategic issue. However, water has now emerged as a critical issue for both corporations and the public sector in response to increased water demand, climatic risks and potentially negative impacts on brand value. This innovative book provides up to date information on global water issues and describes how companies can not only address these challenges but also implement high value global water strategies. It shows: Why water is a critical business issue for companies which now face water risk to their operations and brands; How new concepts such as embedded water and virtual water are forcing companies to think differently about how they use water to manufacture products; That companies need to develop a corporate water strategy to manage it as a key business issue and capture the real value of water; How companies can develop partnerships with non-governmental organizations to implement water strategies

Essays in Industrial Organization and Urban Economics Anton Popov, 2020 First two chapters of this thesis study the wholesale and retail tier of the beer supermarket sales. In the first chapter, I am interested in consolidation of distributors in the beer industry and its interaction with the uniform pricing by retailers. I build a theoretical model which illustrates how distributor consolidation in a set of counties may affect retail prices in all counties, depending on how strong the incentive of retail chains to price uniformly is. I test the predictions of the model using Nielsen scanner price data. I study two events of distributor consolidation in Ohio in 2009–2011, which followed upstream MillerCoors joint venture in 2008. In one of the events, distributor consolidation has no price effects. In another, bigger event, prices of consolidated brands (Miller, Coors, Heineken and Modelo) in treated counties increase by 0.46% relative to the control ABI brands. I find no evidence of prices in other counties being affected. The findings are consistent with some cases of my theoretical model. The implications of this study are that modeling distribution tier and uniform pricing by retailers may be important for horizontal merger practitioners, both for retrospective analysis and for forecasting. Chapter 2 is devoted to the reasons for uniform pricing. I estimate the model, introduced in the first chapter, where supermarket chains have an incentive to set a uniform price for a given product across different locations. The model includes a product-specific baseline price which a supermarket chain sets, and a penalty for deviation from this baseline price. A single store will not deviate from the baseline price, if the marginal profits from doing so are smaller than the penalty parameter. My estimates suggest that the penalty for a dollar change from a benchmark price in a given week is around \$12 to \$16. Uniform pricing leads to suboptimal choice of prices relative to a problem with no penalty. There is substantial price re-optimization, which, however, does not affect profits much, due to changes in prices having a small first-order effect around the optimum. Supermarket chains only lose 0.4% of profits from pricing uniformly. Effects on consumers are highly heterogeneous across locations and weeks, with change in consumer surplus varying from -0.55\$ to 1.92\$ per consumer per week. I show that change in consumer surplus due to uniform prices is positively correlated with income, with higher income zip codes benefiting more from uniform pricing. This effect, although economically meaningful in aggregate, is not large for an average consumer. Chapter 3, written with professors David Atkin and Keith Chen, adds to the literature studying knowledge spillovers in modern cities. The returns to face-to-face interactions are of central importance to understanding the determinants of agglomeration. However, the existing literature studying patterns of geographic proximity in patent citations or industrial co-location has struggled to disentangle the benefits of face-to-face interactions from other spatial knowledge spillovers. In this paper we attempt to more directly measure face-to-face interactions using highly granular worker geolocation data in Silicon Valley. To understand the degree to which knowledge flows result from their interactions, we study the relationship between cross-firm worker meetings and cross-citations between their firms. To navigate endogeneity concerns due to firms organizing meetings with firms they wish to learn from, we focus on serendipitous meetings—measured by the interactions of workers in neighboring firms in very different industries—that play a central role in the urban theories of Jane Jacobs. The subset of these chance meetings occurring during work-hours also serve as costs shifters to meeting face-to-face rather than remotely, allowing us to separately identify the returns to planned meetings. Our results suggest substantial knowledge spillovers from face-to-face interactions, including increases in citations resulting from serendipitous meetings that are a third as large as the elasticity with respect to physical distance.

*The Economics of Beer* Johan F. M. Swinnen, 2011-10-27 Beer has been consumed across the globe for centuries and was the drink of choice in many ancient societies. Today it is the most important alcoholic drink worldwide, in terms of volume and value. The largest brewing companies have developed into global multinationals, and the beer market has enjoyed strong growth in emerging economies, but there has been a substantial decline of beer consumption in traditional markets and a shift to new products. There is close interaction between governments and markets in the beer industry. For centuries, taxes on beer or its raw materials have been a major source of tax revenue and governments have regulated the beer industry for reasons related to quality, health, and competition. This book is the first economic analysis of the beer market and brewing industry. The introduction provides an economic history of beer, from monasteries in the early Middle Ages to the recent 'microbrewery movement', whilst other chapters consider whether people drink more beer during recessions, the effect of television on local breweries, and what makes a country a 'beer drinking' nation. It comprises a comprehensive and unique set of economic research and analysis on the economics of beer and brewing and covers economic history and development, supply and demand, trade and investment, geography and scale economies, technology and innovation, health and nutrition, quantity and quality, industrial organization and competition, taxation and regulation, and regional beer market developments.
