Global Security in the Twenty-First Century Sean Kay, 2015-03-06 This thoroughly updated edition of *Global Security in the Twenty-First Century* offers a balanced introduction to contemporary security dilemmas throughout the world. Sean Kay assesses the impact of the global economic crisis on international security and considers how the range of thinking about power and peace has evolved in relation to major flashpoints including in the Middle East, Asia, and Eurasia. Kay builds on the first and second edition's emphasis on the roles of trade and technology, the militarization of space, the privatization of security, the use of sanctions, ethnic conflict, and transnational crime. This edition goes even farther to incorporate traditional thinking about national security in the context of human rights, democracy, population, health, environment, energy, and especially education. The author includes full updates on emerging challenges out of Iraq, Russia, and viral diseases in the context of larger strategic questions like the rise of China and America's "pivot" to rebalance its priorities toward Asia. Writing in an engaging style, Kay integrates traditional and emerging challenges in one easily accessible study that gives readers the tools they need to develop a thoughtful and nuanced understanding of global security.

Hegel's 'Individuality' Martin Donougho, 2023-10-02 This book explores an overlooked area in Hegel studies: his use of 'individuality'

(Individualität). Hegel joined a lively conversation, from Leibniz to Romanticism and beyond, about this novel concept/phenomenon. Successive chapters track Hegel's engagement, in such texts as the Phenomenology, Encyclopedia, and Aesthetics. Hegel's system tends to follow a syllogistic logic (universal, particular, singular), but 'individuality' departs from the norm. The category enacts a certain pragmatics (as against semantics or syntactics) regarding tacit assumptions at work or implicit terms of address, which requires active participation by a thinking subject charged with discerning individuality (which bars resort to explicit rules). The category reflexively implicates the user even in presuming an objective context. 'Individuality' should not be confused with 'individualism,' wholly distinct in origin. Moreover, Hegel's Aesthetics embraces a paradoxical anachronism. Like 'art' itself, 'individuality' emerged as an essentially modern category, though one transferred to the past and to distant cultures.

Age of Auto Electric Matthew N. Eisler, 2022-12-06 The electric vehicle

revival reflects negotiations between public policy, which promotes clean, fuel-efficient vehicles, and the auto industry, which promotes high-performance vehicles. Electric cars were once as numerous as internal combustion engine cars before all but vanishing from American roads around World War I. Now, we are in the midst of an electric vehicle revival, and the goal for a sustainable car seems to be within reach. In *Age of Auto Electric*, Matthew N. Eisler shows that the halting development of the electric car in the intervening decades was a consequence of tensions between environmental, energy, and economic policy imperatives that informed a protracted reappraisal of the automobile system. These factors drove the electric vehicle revival, argues Eisler, hastening automaking's transformation into a science-based industry in the process. Challenging the common assumption that the electric vehicle revival is due to the development of better batteries, *Age of Auto Electric* instead focuses on changing environmental and socioeconomic conditions, energy and environmental policies, systems of energy conversion and industrial production, and innovation practices that affected the prevalence and popularity of electric vehicles in recent decades. Eisler describes a world in transition from legacy to alternative energy-conversion systems and the promises, compromises, new problems, and unintended consequences that enterprise has entailed.

Freedom from Reality D. C. Schindler, 2017-12-15 It is commonly observed that behind many of the political and cultural issues that we face today

there are impoverished conceptions of freedom, which, according to D. C. Schindler, we have inherited from the classical liberal tradition without a sufficient awareness of its implications. *Freedom from Reality* presents a critique of the deceptive and ultimately self-subverting character of the modern notion of freedom, retrieving an alternative view through a new interpretation of the ancient tradition. While many have critiqued the inadequacy of identifying freedom with arbitrary choice, this book seeks to penetrate to the metaphysical roots of the modern conception by going back, through an etymological study, to the original sense of freedom. Schindler begins by uncovering a contradiction in John Locke's seminal account of human freedom. Rather than dismissing it as a mere "academic" problem, Schindler takes this contradiction as a key to understanding the strange paradoxes that abound in the contemporary values and institutions founded on the modern notion of liberty: the very mechanisms that intend to protect modern freedom render it empty and ineffectual. In this respect, modern liberty is "diabolical"—a word that means, at its roots, that which "drives apart" and so subverts. This is contrasted with the "symbolical" (a "joining-together"), which, he suggests, most basically characterizes the premodern sense of reality. This book will appeal to students and scholars of political philosophy (especially political theorists), philosophers in the continental or historical traditions, and cultural critics with a philosophical bent.

A History of Hegelianism in Golden Age Denmark, Tome I Jon

Stewart,2024-02-19 This is the first of a three-volume work dedicated to exploring the influence of G.W.F. Hegel's philosophical thinking in Golden Age Denmark. The work demonstrates that the largely overlooked tradition of Danish Hegelianism played a profound and indeed constitutive role in many spheres of Golden Age culture. This initial tome covers the period from the beginning of the Hegel reception in the Danish Kingdom in the 1820s until the end of 1836. The dominant figure from this period is the poet and critic Johan Ludvig Heiberg, who attended Hegel's lectures in Berlin in 1824 and then launched a campaign to popularize Hegel's philosophy among his fellow countrymen. Using his journal Kjøbenhavns flyvende Post as a platform, Heiberg published numerous articles containing ideas that he had borrowed from Hegel. Several readers felt provoked by Heiberg's Hegelianism and wrote critical responses to him, many of which appeared in Kjøbenhavnsposten, the rival of Heiberg's journal. Through these debates Hegel's philosophy became an important part of Danish cultural life.

The Amsterdam Town Hall in Words and Images Stijn Bussels, Caroline Van Eck, Bram Van Oostveldt, 2021-05-20 The most famous monument of the Dutch Golden Age is undoubtedly the Amsterdam Town Hall by architect Jacob van Campen inaugurated in 1655. Today we stand in awe confronted with the grand Classicist façade, the delightful horror of the sculptures in the Tribunal, and the magnificence of the huge Citizens' Hall. In the period of its construction, many artists and writers tried to capture the overwhelming impact of the building by, among other comparisons, relating it to the ancient Wonders of the World and by stressing its splendour, riches, and impressive scale. In doing so, they constructed the Town Hall as the ultimate wonder, thus offering a silent, but very powerful testimony to the power and position of the City of Amsterdam and its rulers as equals of the other European regimes. To fully understand these mechanisms of power, this book relates the Town Hall to other, impressive buildings of the same period-the palace of the Louvre, Saint Peter's Basilica, and Banqueting House-and their visual and textual representations. Thus, this book gives a broad audience of readers new insights into the agency of magnificent buildings. The Amsterdam Town Hall in Words and Images does not restrict itself to a national scope or a purely architectural analysis, but clarifies how artists and writers all

over Europe presented buildings as wonders of the world. This book is pioneering in its analysis of seventeenth and eighteenth-century paintings, prints, drawings, poems, and travel accounts and offers a new understanding of how the wondrous character of these grand buildings was constructed.
