The Rocket and the Reich Michael J. Neufeld, 2013-09-10
WINNER OF THE DEXTER PRIZE OF THE SOCIETY FOR THE HISTORY OF TECHNOLOGY Launched by the Third Reich in late 1944, the first ballistic missile, the V-2, fell on London, Paris, and Antwerp after covering nearly two hundred miles in five minutes. It was a stunning achievement, one that heralded a new age of ballistic missiles and space launch vehicles. Michael J. Neufeld gives the first comprehensive and accurate account of the story behind one of the greatest engineering feats of World War II. At a time when rockets were minor battlefield weapons, Germany ushered in a new form of warfare that would bequeath a long legacy of terror to the Cold War, as well as the means to go into space. Both the US and USSR's rocket programs had their origins in the Nazi state.

The Missile Next Door Gretchen Heefner, 2012-09-10 In the 1960s the Air Force buried 1,000 ICBMs in pastures across the Great Plains to keep U.S. nuclear strategy out of view. As rural civilians of all political stripes found themselves living in the Soviet crosshairs, a proud Plains individualism gave way to an economic dependence on the military-industrial complex that still persists today.

Going Ballistic Martin S. Navias, 1993 Addresses the possible threat posed by the use of missiles to deliver nonconventional weaponry in the Middle East.

Taming the Next Set of Strategic Weapons Threats Henry D. Sokolski, 2006 Missile defense and unmanned air vehicle related technologies, are proliferating for a variety of perfectly defensive and peaceful civilian applications. This same know-how can be used to defeat U.S. and allied air and missile defenses in new ways that are far more stressful than the existing set of ballistic missile threats. Unfortunately, the Missile Technology Control Regime is not yet optimized to cope with these challenges. Nuclear technologies have become much more difficult to control

since new centrifuge uranium enrichment facilities and relatively small fuel reprocessing plants can now be built and hidden much more readily than nuclear fuel-making plants that were operating when the Nuclear Nonproliferation Treaty and the bulk of International Atomic Energy Agency inspections procedures were first devised 30 or more years ago. This volume is designed to highlight what might happen if these emerging threats go unattended and how best to mitigate them.

Missile Defense 2020 Thomas Karako, Ian Williams, 2017-04-18 This study explains how the current U.S. missile defense system works, as well as current and potential plans to modernize the system, and the authors offer recommendations for future evolution of the system.

The Development of Ballistic Missiles in the United States Air Force, 1945-1960 Jacob Neufeld, 1990 Following World War II, the onset of nuclear weapons, long-range jet bombers, and ballistic missiles radically changed American foreign policy and military strategy. The United States Air Force, led by men of far-sighted vision and uncommon dedication, accepted the challenge of organizing and leading a massive research and development effort to build ballistic missiles. In the quarter of the century since, these weapons have constituted one of the tree legs of the strategic triad, the basis of America's strategy of deterring nuclear war, yet they have received less attention from the public and within the Air Force than the more glamorous manned bombers of the Strategic Air Command or the missile-launching submarines of the U.S. Navy. This volume attempts to correct the imbalance by telling the story of development of Air Force ballistic Missiles. It concentrates on the first generation of ballistic missiles: the intercontinental Atlas and Titan, and the intermediate range Thor. Although the effort to develop rockets has a longer history than commonly assumed, the modern history spans the relatively short era from 1945 to 1960. During this brief interval, missiles advanced from drawing board

to alert status, where the next generation now remains poised to deter war

The Future of the U.S. Intercontinental Ballistic Missile Force Lauren Caston, Robert S. Leonard, Christopher A. Mouton, 2014-02-04 Assesses alternatives for a next-generation intercontinental ballistic missile (ICBM) across a broad set of potential characteristics and situations and weighs them against the costs of those alternatives.

Missiles Earle Rice, Jr., 2016-07-15 Firing Hellfire missiles in Afghanistan, launching Tomahawk cruise missiles from a destroyer, or manning the underground launch control panel for nuclear warheads is all part of America's military missile program. This book takes readers to the front lines, explaining the innovation, development, and use of precision-guided smart weapons, ballistic missiles, cruise missiles, and nuclear deterrence. They will learn about the dawn of the missile age and how the armed forces use these weapons. Fact boxes give detailed specs about the weapons and an inside look at military training.

People's Liberation Army After Next ,

U.s. Strategic Nuclear Forces Amy F. Woolf, 2017-02-20 Even though the United States is in the process of reducing the number of warheads deployed on its long-range missiles and bombers, consistent with the terms of the New START Treaty, it also plans to develop new delivery systems for deployment over the next 20-30 years. The 115th Congress will continue to review these programs, and the funding requested for them, during the annual authorization and appropriations process. During the Cold War, the U.S. nuclear arsenal contained many types of delivery

vehicles for nuclear weapons. The longer-range systems, which included long-range missiles based on U.S. territory, long-range missiles based on submarines, and heavy bombers that could threaten Soviet targets from their bases in the United States, are known as strategic nuclear delivery vehicles. At the end of the Cold War, in 1991, the United States deployed more than 10,000 warheads on these delivery vehicles. That number has declined to less than 1,500 deployed warheads today, and is slated to be 1,550 deployed warheads in 2018, after the New START Treaty completes implementation. At the present time, the U.S. land-based ballistic missile force (ICBMs) consists of 414 land-based Minuteman III ICBMs, each deployed with one warhead. The fleet will decline to 400 deployed missiles, while retaining 450 launchers, to meet the terms of the New START Treaty. The Air Force is also modernizing the Minuteman missiles, replacing and upgrading their rocket motors, guidance systems, and other components, so that they can remain in the force through 2030. It plans to replace the missiles with a new Ground-based Strategic Deterrent around 2030. The U.S. ballistic missile submarine fleet currently consists of 14 Trident submarines; each can carry up to 24 Trident II (D-5) missiles, although they will carry only 20 under the New START Treaty. The Navy converted 4 of the original 18 Trident submarines to carry non-nuclear cruise missiles. The remaining carry around 1,000 warheads in total; that number will decline as the United States implements the New START Treaty. Nine of the submarines are deployed in the Pacific Ocean and five are in the Atlantic. The Navy also has undertaken efforts to extend the life of the missiles and warheads so that they and the submarines can remain in the fleet past 2020. It is designing a new Columbia class submarine that will replace the existing fleet beginning in 2031. The U.S. fleet of heavy bombers includes 20 B-2 bombers and 54 nuclear-capable B-52 bombers. The B-1 bomber is no longer equipped for nuclear missions. The fleet will decline to around 60 aircraft in coming

years, as the United States implements New START. The Air Force has also begun to retire the nuclear-armed cruise missiles carried by B-52 bombers, leaving only about half the B-52 fleet equipped to carry nuclear weapons. The Air Force plans to procure both a new long-range bomber and a new cruise missile during the 2020s. DOE is also modifying and extending the life of the B61 bomb carried on B-2 bombers and fighter aircraft and the W80 warhead for cruise missiles. The Obama Administration completed a review of the size and structure of the U.S. nuclear force, and a review of U.S. nuclear employment policy, in June 2013. This review has advised the force structure that the United States will deploy under the New START Treaty. It is currently implementing the New START Treaty, with the reductions due to be completed by 2018. The Trump Administration has indicated that it will conduct a new review of the U.S. nuclear force posture. Congress will review the Administration's plans for U.S. strategic nuclear forces during the annual authorization and appropriations process, and as it assesses U.S. plans under New START and the costs of these plans in the current fiscal environment. This report will be updated as needed.

A Girl's Guide to Missiles Karen Piper, 2019-08-13 A poignant, surreal, and fearlessly honest look at growing up on one of the most secretive weapons installations on earth, by a young woman who came of age with missiles The China Lake missile range is located in a huge stretch of the Mojave Desert, about the size of the state of Delaware. It was created during the Second World War, and has always been shrouded in secrecy. But people who make missiles and other weapons are regular working people, with domestic routines and everyday dilemmas, and four of them were Karen Piper's parents, her sister, and--when she needed summer jobs--herself. Her dad designed the Sidewinder, which was ultimately used catastrophically in Vietnam. When her mom got tired of being a stay-at-home mom, she went to work on the Tomahawk. Once, when a missile nose needed to be taken

offsite for final testing, her mother loaded it into the trunk of the family car, and set off down a Los Angeles freeway. Traffic was heavy, and so she stopped off at the mall, leaving the missile in the parking lot. Piper sketches in the belief systems--from Amway's get-rich schemes to propaganda in *The Rocketeer* to evangelism, along with fears of a Lemurian takeover and Charles Manson--that governed their lives. Her memoir is also a search for the truth of the past and what really brought her parents to China Lake with two young daughters, a story that reaches back to her father's World War II flights with contraband across Europe. Finally, *A Girl's Guide to Missiles* recounts the crossroads moment in a young woman's life when she finally found a way out of a culture of secrets and fear, and out of the desert.

The Bomb and America's Missile Age Christopher Gainor, 2018-10-15 How nuclear weapons helped drive the United States into the missile age. The intercontinental ballistic missile (ICBM), designed to quickly deliver thermonuclear weapons to distant targets, was the central weapons system of the Cold War. ICBMs also carried the first astronauts and cosmonauts into orbit. More than a generation later, we are still living with the political, technological, and scientific effects of the space race, while nuclear-armed ICBMs remain on alert and in the headlines around the world. In *The Bomb and America's Missile Age*, Christopher Gainor explores the US Air Force's (USAF) decision, in March 1954, to build the Atlas, America's first ICBM. Beginning with the story of the guided missiles that were created before and during World War II, Gainor describes how the early Soviet and American rocket programs evolved over the course of the following decade. He argues that the USAF was wrongly criticized for unduly delaying the start of its ICBM program, endangering national security, and causing America embarrassment when a Soviet ICBM successfully put Sputnik into orbit ahead of any American satellite. Shedding fresh light on the roots of America's space program and the development of US

strategic forces, *The Bomb and America's Missile Age* uses evidence uncovered in the past few decades to set the creation of the Atlas ICBM in its true context—not only in the America of the postwar years but also in comparison with the real story of the Soviet missiles that propelled the space race and the Cold War. Aimed at readers interested in the history of the Cold War and of space exploration, the book makes a major contribution to the history of rocket development and the nuclear age.

The Impact of Missile Threats on the Reliability of U.S.

Overseas Bases Joel Wuthnow, 2005 Although the United States will continue to utilize overseas military bases in the next decade, the acquisition and improvement of long-range missiles by several potential aggressors will pose new operational and strategic problems for U.S. forces. Several states will likely attain a credible capability to threaten U.S. bases within their respective regions, despite the sophistication of U.S. missile defenses. Strategically, there are uncertainties about whether the United

States can deter some of these new missile-capable actors. Deterrence problems will create new risks to U.S. deployed forces: if deterrence fails, U.S. troops will be at a higher level of exposure. Alternately, missiles will grant states some leverage to dissuade the United States from actually using overseas forces, as well as a means to coerce host states into denying access to the United States. Though several factors will mitigate these concerns, the question remains: How reliable will alliance-derived tripwires and other deployments be in the overall U.S. strategy of engagement? Alterations in force structure, tailored to these threats, will likely be needed.

Cruise Missiles Richard K. Betts, 1981

Regional Ballistic Missile Defense in the Context of Strategic Stability Russian Academy of Sciences, National Academy of Sciences, Policy and Global Affairs, Committee on International Security and Arms Control, Joint Committee on Ballistic Missile Defense in the Context of Strategic Stability, 2019-12-13 As ballistic missile technology proliferates, and as ballistic missile defenses are deployed by both the Russian Federation and the United States, it is increasingly important for these two countries to seek ways to reap the benefits of systems that can protect their own national security interests against limited missile attacks from third countries without undermining the strategic balance that the two governments maintain to ensure stability. **Regional Ballistic Missile Defense in the Context of Strategic Stability** examines both the technical implications of planned missile defense deployments for Russian and U.S. strategic deterrents and the benefits and disadvantages of a range of options for cooperation on missile defense.

Sidewinder Ron Westrum, 1999 In the mid-1950s a small group of overworked, underpaid scientists and engineers on a remote base in the Mojave Desert developed a weapon no one had asked for but everyone in the weapons industry desired. This is the story of how that unorthodox team, led by visionary Bill

McLean, overcame U.S. Navy bureaucracy and other more heavily funded projects to develop the world's best air-to-air missile. Author Ron Westrum examines that special time and place—when the old American work ethic and “can do” spirit were a vital part of U.S. weapons development—to discover how this dedicated team was able to create a simple and inexpensive missile. Today, many decades after its invention, the Sidewinder missile is still considered one of the best that America has to offer. In a time of billion-dollar weapons development contracts, astronomical cost overruns, and defense acquisitions scandals, this revealing, highly readable tale about one of the most successful weapons in history should be of interest to anyone concerned with national security.
