Aerial Spray Adjuvants for Herbicidal Drift Control H. Gratkowski,1973 Increased public concern about pesticides requires that foresters reduce drift and insure precise application of herbicides to the areas requiring treatment. Drift control is necessary near waterways and other ecologically sensitive areas. This publication discusses available drift control adjuvants for herbicidal sprays. These include invert emulsions, thickening agents, particulating agents, and foam sprays. Commercially available adjuvants are described and their use, advantages, and disadvantages are discussed. Thickening agents and foam sprays show special promise for drift reduction in aerial application of herbicides on forest lands.

Pesticide Application Equipment for Use in Agriculture: Manually carried equipment G. A. Matthews,E. W. Thornhill,Food and Agriculture Organization of the United Nations,1994 Describes the main types of manually-operated or manually-carried pesticide application equipment. Gives details of design and shows the type of nozzle needed to treat crops and to improve the safety and efficiency of the spraying operation.

Guidelines on Minimum Requirements for Agricultural Pesticide Application Equipment T. L. Wiles,Hans Dobson,Food and Agriculture Organization of the United Nations,2001 The FAO minimum requirements in this publication are based on existing international, European and national standards and other published references. The guidelines provide a practical aid to assist purchasing and other agencies to avoid buying or approving sprayers with quality and design limitations, which could compromise operator and environmental safety. Member countries should adopt them immediately, to begin to eliminate substandard and unsafe sprayers from national markets and ultimately from the international scene.

Aerial Application Equipment for Herbicidal Drift Reduction R. E. Stewart,H. Gratkowski,1976 This publication provides silviculturists and managers of utility rights-of-way with a description and evaluation of available helicopter spray application equipment. Modified conventional equipment will reduce drift of sprays in normal carriers and apply various high-viscosity sprays. Specialized spray systems have found limited use in forestry; they are more commonly used on utility rights-of-way. Most of the available spray systems or spray adjuvants reduce but do not completely eliminate drift. Maximum drift reduction with present equipment and adjuvants is obtained with the Microfoil Boom.

Guidelines on Minimum Requirements for Agricultural Pesticide Application Equipment: Vehicle-mounted and trailed sprayers ,2001 The FAO guidelines on minimum requirements for agricultural pesticide spray equipment are based on existing international, European and national standards, as well as other published references and expert knowledge. The guidelines provide a practical aid to avoid buying or approving sprayers with quality and design limitations which could compromise operator and environmental safety.
