Using Technology to Support Learning and Teaching Andy Fisher,Kate Exley,Dragos Ciobanu,2014-01-03 The climate of Higher Education is changing rapidly. The students are more likely to see themselves as consumers and have increasingly high expectations regarding teaching and learning. Universities are in part aiming to meet this need by increasing the use of technology; for example, whether to increase access to teaching materials outside the classroom or to make lectures more interactive. Although there is no illusion amongst Higher Education intuitions that technology is a panacea, it is clear that technology is a vital tool in meeting expectations and one that will be used more and more. Consequently the context of this book is one in which technology needs to be understood as part of an overall teaching practice. Technology continues to move on a pace and is used increasingly within Higher Education to support and enhance teaching and learning. There are books which are steeped in technical detail and books which are steeped in theoretical pedagogy with little discussion about the impact on learning and student/teacher behaviour. Using Technology to Support Learning and Teaching fills a gap in the market by providing a jargon free (but pedagogically informed) set of guidance for teaching practitioners who wish to consider a variety of ways in which technology can enrich their practice and the learning of their students. It integrates a wide range of example cases from different kinds of HE institutions and different academic disciplines, illustrating practicable pedagogies to a wide range of readers. It is full of advice, hints and tips for practitioners wanting to use technology to support a style of teaching and learning that is also built on sound pedagogical principles. It will provide a quick user-friendly reference for practitioners wanting to incorporate technology into Higher Education in a way that adheres to their learning principles and values . This book is primarily for teaching practitioners, particularly those who are new to the industry.This book would also prove useful on training courses for practitioners; such as the Postgraduate Certificate for Higher Education. The authors also intend that the book be of value to newer teachers (perhaps taking teacher training programmes) who wish to see where recommended approaches link to pedagogy.

Active Learning Techniques for Librarians Andrew Walsh, Padma Inala, 2010-09-01 A practical work outlining the theory and practice of using active learning techniques in library settings. It explains the theory of active learning and argues for its importance in our teaching and is illustrated using a large number of examples of techniques that can be easily transferred and used in teaching library and information skills to a range of learners within all library sectors. These practical examples recognise that for most of us involved in teaching library and information skills the one off session is the norm, so we need techniques that allow us to quickly grab and hold our learners' attention. The examples are equally useful to those new to teaching, who wish to bring active learning into their sessions for the first time, as to those more experienced who want to refresh their teaching with some new ideas and to carry on their development as librarian teachers. Outlines the argument for more active learning techniques in our sessions Explains the theory of active learning Includes examples that can be used in teaching
